Taqrib chilar:

V.R. Xojoboyev – fizika-matematika fanlari doktori.

O.S. Zikirov – O'zMU dotsenti,

E.K. Qayumov – ToshDTU dotsenti.

Mas'ul muharrir: O. Mo'minov

Fizika-matematika fanlari doktori, professor S. Abdinazarov  
tahriri ostida

Qo'llanmada oddiy differensial tenglamalar bo'yicha qisqacha nazariy ma'lumotlar va tipik masalalarning yechimlari keltirilgan. Bundan tashqari, mustaqil yechish uchun ham masalalar berilgan. Qo'llanma Oliy texnika o'quv yurtlari uchun oddiy differensial tenglamalar bo'limi bo'yicha dasturni to'la qarrab olgan.

ISBN 978-9943-375-04-8

## SO'ZBOSHI

O'zbek tiliga davlat tili maqomi berilishi munosabati bilan oliv o'quv yurtlarida o'zbek tilidagi o'quv adabiyotlarining yetishmov-chiligi sezilib qoldi. Shu munosabat bilan darslik va o'quv qo'llanmalar yaratishga ehtiyoj paydo bo'ldi.

«Ta'lif to'g'risida»gi Qorunning va yangi davlat ta'lif standartlarining qabul qilinishi darslik va o'quv qo'llanmalarga yangi talablarini vujudga keltirdi.

Ushbu o'quv qo'llanma oddiy differensial tenglamalari mavzulari bo'yicha amaliy rashg'ulot darslari uchun mo'ljallangan. Kitob uch bo'limdan iborat bo'lib, I.A. Gafarov tomonidan kitobning kirish qismi va birinchi tartibli differensial tenglamalarga bag'ishlangan birinchi bo'limi yozilgan. Ikkinci bo'lim Y.P. Oppoqov tomonidan yozilgan bo'lib, yuqori tartibli tenglamalarni o'z ichiga oladi. N. Turgunov tomonidan yozilgan uchinchi bo'limda differensial tenglamalarning boshqa asosiy tushunchalari bayon etilgan.

Har bir mavzuda qisqa nazariy ma'lumotlar va foydalilaniladigan asosiy formulalar hamda na muna uchun tipik misol va masalalar yechimlari bilan ko'rsatilgan. Mustaqil yechish uchun tavsiya qilin-gan misollarning javoblari keltilrilgan.

Kitobdagi masalalar, asosan, o'zbek va rus tilidagi mavjud adabiyotlardan olingan, ayrim masalalar mualliflar tomonidan tuzilgan.

Texnika oliy o'quv yurtlarida oliy matematikaning «Operatsion hisob elementlari» hamda «Matematik-fizika tenglamalari» bo'limlariga ajratiladigan soatlarni ng kamligini e'tiborga olib, III bobga yuqoridagi ikki bo'limni ham kiritishni lozim deb topildi.

O'quv qo'llanmadan universitetlar nomatematik mutaxassisligi hamda texnika oliy o'quv yurtlari talabalari foydalanishlari mumkin.

Mualliflar qo'lyozmani diqqat bilan ko'rib chiqib, uni yaxshilash yuzasidan fikr-mulohaza bildirgan Namangan Muhandislik-pedagogika instituti va ushbu institut «Oliy matematika» kafedrasining a'zolariga minnatdorchilik bildiradilar.

Kitob to'g'risida bildirilgan fikrlarni mualliflar mamnuniyat bilan qabul qiladilar.

## KIRISH

### 1- §. Differensial tenglamalar haqida umumiy tushunchalar

**1- ta'rif.** Differensial tenglama deb, erkli o'zgaruvchi  $x$ , noma'lum  $y=f(x)$  funksiya va uning  $y'$ ,  $y''$ , ...,  $y^{(n)}$  hosilalari orasidagi bog'lanishni ifodalaydigan tenglamaga aytildi. Differensial tenglama umumiy holda quyidagicha yoziladi:

$$F(x, y, y', y'', \dots, y^{(n)}) = 0$$

yoki

$$F\left(x, y, \frac{dy}{dx}, \frac{d^2y}{dx^2}, \dots, \frac{d^ny}{dy^n}\right) = 0.$$

Agar izlanayotgan funksiya  $y=f(x)$  bitta erkli o'zgaruvchining furksiyasi bo'lsa, u holda differensial tenglama *oddiy differensial tenglama* deyiladi.

Umuman, noma'lum funksiya ko'p argumentli bo'lgan hollar ham tez-tez uchraydi. Bunday holda differensial tenglama *xususiy hosilali differensial tenglama* deb ataladi. Biz faqat oddiy differensial tenglamalar bilan shug'ullanamiz.

**2- ta'rif.** Differensial tenglamaning tartibi deb, tenglamada qat-nashgan hosilaning eng yuqori tartibiga aytildi.

Masalan,  $(y')^2 + 2y' + xy^3 = 0$  tenglama birinchi tartibli differensial tenglamadir.

Mana bu  $(y'')^2 + ay' + by + \cos x = 0$  tenglama esa ikkinchi tartibli differensial tenglama.

**3- ta'rif.** Differensial tenglamaning yechimi yoki integrali deb, differensial tenglamaga qo'yganda uni ayniyatga aylantiradigan har qanday  $y=f(x)$  funksiyaga aytildi.

Masalan, ushbu tenglama berilgan bo'lsin:

$$\frac{d^2y}{dx^2} + y = 0.$$

$y = \sin x$ ,  $y = 2 \cos x$ ,  $y = 3 \sin x - \cos x$  funksiyalar, umuman,  $y = C_1 \sin x$ ,  $y = C_2 \cos x$  yok i  $y = C_1 \sin x + C_2 \cos x$  ko'rinishdagi funksiyalar  $C_1$  va  $C_2$  o'zgarmas miqdorlarning har qanday qiymatlarida ham berilgan differensial tenglamaning yechimi bo'ladi. Buning to'g'riligiga ko'rsatilgan funksiyalarni berilgan tenglamaga qo'yib ko'rib, ishonish mumkin.

## 2-§. Differensial tenglamaga olib keladigan ba'zi bir masalalar

**1-masala.** Massasi  $m$  bo'lgan jism  $v(0) = v_0$  boshlang'ich tezlik bilan biror balandlikdan tashlab yuborilgan. Jism tezligining o'zgarish qonunini toping.

Nyutonnning ikkinchi qonuniga ko'ra:  $m \frac{dv}{dt} = F$ , bu yerda  $F$  – jismga ta'sir etayotgan kuchlarning yig'indisi. Jismga faqat ikkita kuch ta'sir etishi mumkin, deb hisoblaylik: havoning qarshilik kuchi  $F_1 = -kv$ ,  $k > 0$ , yerning tortish kuchi  $F_2 = mg$ . U holda ushbu

$$m \frac{dv}{dt} = mg - kv \quad (k > 0)$$

differensial tenglamaga kela miz. Bu differensial tenglamaning  $v(0) = v_0$  shartni qanoatlanuvchi yechimi

$$v(t) = \left( v_0 - \frac{mg}{k} \right) \cdot e^{-\frac{k}{m}t} + \frac{mg}{k}$$

ekanligini bevosita o'rniliga qo'yish bilan tekshirish qiyin e mas.

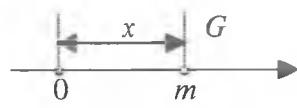

**2-masala.** Hayvonlarning biror turi o'zgarmas muhitda alohida yashasin deylik. Urchish va o'lishning davriyligini hisobga olmay, ko'rيلотган тур individuumlari sonining o'zgarish qonuniini toping.

Masalaning shartiga ko'ra vaqtning berilgan kichik intervalida urchish va o'lishlar soni berilgan individuumlar soniga proporsional bo'ladi.  $N$  individuumlar sonining o'sishi ko'rيلотган intervalda  $N_0$  soniga proporsional bo'lub, bu o'sish interval uzunligiga ham proporsional bo'ladi. Shunday qilib,  $N(t)$  funksiyani uzliksiz va uzlusiz differensialanuvchi deb qarasar, ushbu

$$\frac{dN(t)}{dt} = \varepsilon \cdot N(t), \quad N(t_0) = N_0 > 0$$

differensial tenglamaga ega bo'lamiz, bu yerda  $\varepsilon$  – proporsionallik koefitsiyenti («o'sish» koefitsiyenti). Urchish qonuni differensial tenglama bilan berilgan funksiyaning ko'rinishi  $N(t) = N_0 \cdot e^{\varepsilon(t-t_0)}$  e kaniga ishonch qilish qiyin emas. Bundan kelib chiqadiki, vaqt arifmetik progressiya bo'yicha o'zgarsa, individuumlar soni geometrik progressiya bo'yicha o'zgaradi. Agar  $\varepsilon > 0$  bo'lsa,  $N(t)$  o'sadi; agar  $\varepsilon < 0$  bo'lsa,  $N(t)$  kamayadi.  $\varepsilon = 0$  bo'lganda  $N(t)$  o'zgarmas bo'lib, urchish o'lishni to'la qoplaydi.

**3- masala.** Massasi  $m$  bo'lgan moddiy nuqta to'g'ri chiziqli harakat qilmoqda. Uning harakat qonunini toping.

Har bir momentda  $G$  nuqtadan koordinata boshigacha bo'lgan masofa  $x$  bo'lsa, nuqta tezligi  $\dot{x}$  ( $\dot{x} = \frac{dx}{dt}$ ) bo'ladi.

Moddiy nuqtaga ikki tashqi kuchi: ishqalanish kuchi  $-bx$ ,  $b > 0$  va taranglik kuchi  $-kx$ ,  $k > 0$  ta'sir etadi deylik.

Nyutonning ikkinchi qonuniga asosan  $G$  nuqtaning harakat qonuni

$$m\ddot{x} = -b\dot{x} - kx$$

bo'ladi. Bu ikkinchi tartibli differensial tenglarnadir. Agar moddiy nuqta dvigateb bilan ta'minlangan bo'lib, dvigatelning  $G$  nuqtaga ta'sir kuchi  $F$  bo'lsa, u holda  $G$  ning harakat qonuni

$$m\ddot{x} = -b\dot{x} - kx + F$$

bo'ladi. Ko'pincha  $F$  miqdor  $|F| \leq F_0 = \text{const}$  munosabatga bo'y sunadi.

## I BOB

### BIRINCHI TARTIBLI DIFFERENSIAL TENGLAMALAR

#### 1 - §. Birinchi tartibli differensial tenglamalarga doir umumiy tushunchalar

Birinchi tartibli differensial tenglama

$$F(x, y, y') = 0 \quad (1.1)$$

ko‘rinishda bo‘ladi. Agar bu tenglamani  $y'$  ga nisbatan yechish mumkin bo‘lsa, uni

$$y' = f(x, y) \quad (1.2)$$

ko‘rinishda yozish mumkin.

Bu holda differensial tenglama hosilaga nisbatan yechilgan deyiladi. Bunday tenglama uchun quyidagi teorema o‘rinli bo‘lib, bu teorema differensial tenglama yechimining mavjudligi va yagonaligi haqidagi teorema deyiladi.

**Teorema.** Agar  $y' = f(x, y)$  tenglamada  $f(x, y)$  funksiya va undan  $y$  bo‘yicha olingan  $\frac{df}{dy}$  xususiy hosila  $xOy$  tekislikdagi  $(x_0, y_0)$  nuqtani o‘z ichiga o‘luvchi biror sohada uzliksiz funksiyalar bo‘lsa, u holda berilgan tenglamaning  $x=x_0$  bo‘lganda  $y=y_0$  shartni qanoatlaniruvchi birgina  $y=\varphi(x)$  yechimi mavjuddir.

Bu teorema geometrik nuqtayi nazardan grafigi  $(x_0, y_0)$  nuqtadan o‘tuvchi birgina  $y=\varphi(x)$  funksiyaning mavjudligini ifod alaydi. Teoremadan (1.2) tenglama cheksiz ko‘p turli yechimlarga ega ekanligi kelib chiqadi.

$x=x_0$  bo‘lganda  $y$  funksiya berilgan  $y_0$  songa teng bo‘lishi kerak, degan shart *boshlang‘ich shart* deyiladi. Bu shart ko‘pincha

$$y \Big|_{x=x_0} = y_0 \quad (1.3)$$

ko‘rinishda yoziladi.

**1- ta’rif.** Birinchi tartibli differensial tenglamaning umumiy yechimi deb bitta ixtiyoriy  $C$  o‘zgarmas miqdoriga bog‘liq bo‘lgan hamda quyidagi shartlarni qanoatlantiruvchi  $y = \varphi(x, C)$  funksiyaga aytildi:

a) bu funksiya differensial tenglamani  $C$  o‘zgarmas miqdorning har qanday aniq qiymatida qanoatlantiradi;

b)  $x=x_0$  bo‘lganda  $y=y_0$ , ya’ni  $y|_{x=x_0} = y_0$  boshlang‘ich shart har qanday bo‘lganda ham  $C$  miqdorning shunday  $C=C_0$  qiymatini topish mumkinki. bunda  $y = \varphi(x, C_0)$  funksiya berilgan boshlang‘ich shartni qanoatlantiradi. Ushbu holda  $x_0$  va  $y_0$  qiymatlar  $x$  va  $y$  o‘zgaruvchilarning o‘zgarish sohasining yechim mavjudligi va yagonaligi haqidagi teoremaning shartlari bajariladigan qismiga tegishli, deb faraz etiladi.

Biz differensial tenglamaning umumiy yechimini izlashda ko‘pincha  $y$  ga nisbatan yechilmagan

$$\Phi(x, y, C) = 0$$

ko‘rinishdagi munosabatga kelib qolamiz. Bu munosabatni  $y$  ga nisbatan yechsak, umumiy yechimni hosil qilamiz. Ammo  $y$  ni  $\Phi(x, y, C) = 0$  munosabatdan foydalanib elementar funksiyalar bilan ifoda etish hamma vaqt ham mumkin bo‘lavermaydi. Bunday hollarda umumiy yechim oshkormas ko‘rinishda qoldiriladi.

Umumiy yechimni oshkormas holda ifodalovchi  $\Phi(x, y, C) = 0$  ko‘rinishdagi tenglik differensial tenglamaning umumiy integrali deyiladi.

**Misol.** Birinchi tartibli

$$\frac{dy}{dx} = -\frac{y}{x}$$

tenglama uchun  $y = \frac{C}{x}$  funksiyalar oilasi umumiy yechim bo‘ladi: buning to‘g‘riligini  $y$  funksiyani tenglamaga qo‘yib tekshirish mumkin.

## 2- §. O‘zgaruvchilari ajralgan va ajraladigan tenglamalar

Ushbu  $M(x)dx + N(y)dy = 0$  ko‘rinishdagi tenglama o‘zgaruvchilari ajralgan differensial tenglama deyiladi. Uning o‘ziga xos tomoni shunda ki,  $dx$  oldida faqat  $x$  ga bog‘liq ko‘paytuvchi,  $dy$  oldida

esa faqat  $y$  ga bog'liq ko'paytuvchi turadi. Bu tenglamaning yechimi uni hadma-had integrallash yo'lli bilan aniqlanadi:

$$\int M(x)dx + \int N(y)dy = C.$$

Differensial tenglamaning oshkormas holda ifodalangan yechimi bu *tenglamaning integrali* deyiladi. Integrallash doimiysi  $C$  ni yechim uchun qulay ko'rinishda tanlash mumkin.

**1- misol.**  $\operatorname{tg}x dx - \operatorname{ctg}y dy = 0$  tenglamining umumiy yechimini toping.

Yechish. Bu yerda o'zgaruvchilari ajralgan tenglamaga egamiz. Uni hadma-had integrallaymiz:

$$\int \operatorname{tg}x dx - \int \operatorname{ctg}y dy = C \quad \text{yoki} \quad -\ln|\cos x| - \ln|\sin y| = -\ln \bar{C}.$$

Bu yerda integrallash doimiysi  $C$  ni  $-\ln \bar{C}$ , ya'ni  $C = -\ln \bar{C}$  orqali belgilash qulaydir, bundan  $\ln \sin y \cdot \cos x = \ln \bar{C}$  yoki  $\sin y \cdot \cos x = \bar{C}$  umumiy integralni topamiz.

*Ta'rif.*

$$y' = f_1(x)f_2(y) \quad (1.4)$$

ko'rinishdagi tenglamalar o'zgaruvchilari ajraladigan differensial tenglamalar deb ataladi, bu yerda  $f_1(x)$  va  $f_2(y)$  – uzlusiz funksiyalar.

(1.4) tenglamani yechish uchun unda o'zgaruvchilarni ajratish kerak. Buning uchun (1.4) da  $y'$ ning o'rniga  $dy/dx$  ni yozib, tenglamaning ikki tomonini  $f_2(y) \neq 0$  ga bo'lamiz va  $dx$  ga ko'paytiramiz. U holda (1.4) tenglama

$$\frac{dy}{f_2(y)} = f_1(x)dx \quad (1.5)$$

ko'rinishga keladi. Bu tenglamada  $x$  o'zgaruvchi faqat o'ng tomonda,  $y$  o'zgaruvchisi esa chap tomonda ishtiroy etyapti, ya'ni o'zgaruvchilar ajratildi. (1.5) tenglikning har ikki tomonini integrallab,

$$\int \frac{dy}{f_2(y)} = \int f_1(x)dx + C$$

ekanligini hosil qilamiz, bu yerda  $C$  – ixtioriy o'zgarmas.

**2- misol.**  $y' = y/x$  tenglamani yeching.

Yechish. Berilgan tenglama (1.4) ko'rinishdagi tenglama, bu yerda  $f_1(x) = 1/x$  va  $f_2(y) = y$ . O'zgaruvchilarni ajratib,  $\frac{dy}{y} = \frac{dx}{x}$

ternglamani hosil qilamiz. Uni integrallab  $\int \frac{dy}{y} = \int \frac{dx}{x} + \ln C$ ,  $C > 0$  yoki  $\ln y = \ln x + \ln C$  va bu tenglikni potensirlab.  $y = Cx$  umumiy yechimni topamiz.

Faraz qilaylik,  $y = Cx$  umumiy yechimdan  $x_0=1$ ,  $y_0=2$  boshlang'i ch shartlarni qanoatlantiruvchi xususiy yechim topish talab qilin-yapti. Bu qiymatlarni  $y = C \cdot x$  ga  $x$  va  $y$  larning o'miga qo'yib,  $2=C \cdot 1$  yoki  $C=2$  ni topamiz. Demak, xususiy yechim  $y=2x$  ekan.

**Quyidagi tenglamalarni yeching:**

1.  $x(y^2 - 4)dx + ydy = 0$ .
2.  $y' \cos x = y/\ln y$ ,  $y(0)=1$ .
3.  $y' = \operatorname{tg} x \cdot \operatorname{tg} y$ .
4.  $(1+x^2)dy + ydx = 0$ ,  $y(1) = 1$ .
5.  $\ln \cos y dx + x \operatorname{tg} y dy = 0$ .
6.  $\frac{yy'}{x} + e^y = 0$ ,  $y(1)=0$ .
7.  $y/y' = \ln y$ ,  $y(2) = 1$ .
8.  $y' + \sin(x + y) = \sin(x - y)$ .
9.  $x\sqrt{1+y^2}dx + y\sqrt{1+x^2}dy = 0$ .
10.  $y' = 2^{x-y}$ ,  $y(-3) = -5$ .
11.  $y' = \operatorname{sh}(x + y) + \operatorname{sh}(x - y)$ .
12.  $x(y^6 + 1)dx + y^2(x^4 + 1)dy$ ,  $y(0) = 1$ .

### 3- §. Bir jinsli va bir jinsliga keltiriladigan differensial tenglamalar

#### Birinchi tartibli bir jinsli differensial tenglamalar

**1- ta'rif.** Agar ixtiyoriy  $\lambda$  uchun

$$f(\lambda x, \lambda y) = \lambda^n f(x, y)$$

aynaliyat o'rinni bo'lsa,  $f(x, y)$  funksiya  $x$  va  $y$  o'zgaruvchilarga nisbatan  $n$ -o'lchovli bir jinsli funksiya deb ataladi.

**1- misol.**  $f(x, y) = \sqrt[3]{x^3 + y^3}$  funksiya bir o'lchovli bir jinsli funksiya, chunki  $f(\lambda x, \lambda y) = \sqrt[3]{(\lambda x)^3 + (\lambda y)^3} = \lambda \sqrt[3]{x^3 + y^3} = \lambda f(x, y)$ .

**2- misol.**  $f(x, y) = xy - y^2$  funksiya 2-o'lchovli bir jinsli funksiya, chunki  $f(\lambda x, \lambda y) = (\lambda x) \cdot (\lambda x) - (\lambda y)^2 = \lambda^2(xy - y^2) = \lambda^2 f(x, y)$ .

**3- misol.**  $f(x, y) = \frac{x^2 - y^2}{xy}$  funksiya 0- o'lchovli bir jinsli funksiya, chunki

$$f(\lambda x, \lambda y) = \frac{(\lambda x)^2 - (\lambda y)^2}{\lambda x \cdot \lambda y} = \frac{\lambda^2(x^2 - y^2)}{\lambda^2 xy} = \lambda^0 \frac{x^2 - y^2}{xy} = \lambda^0 f(x, y).$$

**2- ta'rif.** Birinchchi tartibli

$$\frac{dy}{dx} = f(x, y) \quad (1.6)$$

differensial tenglarma  $x$  va  $y$  ga nisbatan bir jinsli differensial tenglama deb ataladi (agar  $f(x, y)$  funksiya  $x$  va  $y$  ga nisbatan 0- o'lchovli bir jinsli funksiya bo'lsa).

**Bir jinsli differensial tenglamani yechish.** Faraz qilaylik, (1.6) bir jinsli differensial tenglama berilgan bo'lsin, u holda shartga ko'ra

$$f(\lambda x, \lambda y) = \lambda^0 f(x, y). \text{ Bu ayniyatda } \lambda = \frac{1}{x} \text{ deb olsak, } f(x, y) =$$

$f\left(1, \frac{y}{x}\right)$  ni hosil qilamiz. Bu holda (1.6) tenglama quyidagi ko'rinishga keladi:

$$\frac{dy}{dx} = f\left(1, \frac{y}{x}\right). \quad (1.7)$$

(1.7) da  $u = \frac{y}{x}$ , ya'ni  $y = u \cdot x$  almashtirish bajaramiz.

U holda  $\frac{dy}{dx} = u + \frac{du}{dx} \cdot x$  ni hosil qilamiz. Hosilaning bu ifodasini

(1.7) ga qo'yib,  $u + \frac{du}{dx} \cdot x = f(1, u)$  yoki  $\frac{du}{f(1, u) - u} = \frac{dx}{x}$  tenglikni hosil qilamiz. Bu esa o'zgaruvchilari ajralgan differensial tenglama-dir. Integrallab quyidagini topamiz:

$$\int \frac{du}{f(1, u) - u} = \int \frac{dx}{x} + \ln C, \quad \int \frac{du}{f(1, u) - u} = \ln |Cx|.$$

Integrallarni topgandan so'ng  $u$  o'rniغا  $\frac{y}{x}$  ni qo'yib, berilgan te nglamaning integralini  $y = y(x, C)$  ko'rinishida topamiz.

**4- misol.**  $\frac{dy}{dx} = \frac{xy}{x^2 - y^2}$  tenglamani yeching.

Y e c h i s h . Tenglamaning o'ng tomonidagi funksiya 0-o'lchovli bir jinsli funksiya bo'lgani uchun tenglama bir jinsli differensial te nglama, shuning uchun  $\frac{y}{x} = u$  almashtirishni bajaramiz. U holda  $y = ux$ ,  $\frac{dy}{dx} = u + x \cdot \frac{du}{dx}$ . Bularni tenglamaga qo'yib  $u + x \cdot \frac{du}{dx} = \frac{u}{1-u^2}$

yoki  $x \cdot \frac{du}{dx} = \frac{u^3}{1-u^2}$  va o'zgaruvchilarni ajratib,  $\frac{(1-u^2)du}{u^3} = \frac{dx}{x}$ , ya'ni  $\left(\frac{1}{u^3} - \frac{1}{u}\right)du = \frac{dx}{x}$  tenglamaga kelamiz.

Integrallash natijasida  $-\frac{1}{2u^2} - \ln|u| = \ln|x| + \ln|C|$  yoki  $-\frac{1}{2u^2} = \ln|uxC|$  munosabatlarni hosil qilamiz. Oxirgi tenglikda  $u$  o'rniغا  $\frac{y}{x}$  ni qo'yib,  $-\frac{x^2}{2y^2} = \ln|Cx|$  tenglamaning umumiy integralini topamiz. Ko'rinib turibdiki,  $y$  ni  $x$  orqali elementar funksiyalar yordamida ifodalab bo'lmaydi. Biroq  $x$  ni  $y$  orqali ifodalash mumkin:  $x = y\sqrt{-2 \ln|Cy|}$ .

### Bir jinsli tenglamalarga keltiriladigan differensial tenglamalar

$$\frac{dy}{dx} = \frac{ax+by+C}{a_1x+b_1y+C_1} \quad (1.8)$$

Ko'rinishdagi tenglamalarni bir jinsli tenglamalarga keltirish mumkin. Agar  $C_1 = 0$ ,  $C = 0$  bo'lsa, tenglama bir jinsli bo'lishini ko'rish

qiyin emas. Faraz qilaylik,  $C$  va  $C_1$  larning birortasi noldan farqli bo'lsin.  $x = x_1 + h$ ,  $y = y_1 + k$  almashtirish bajaramiz. U holda

$$\frac{dy}{dx} = \frac{dy_1}{dx_1}. \quad (1.9)$$

$x$ ,  $y$  va  $\frac{dy}{dx}$  ifodalarni (1.8) tenglamalarga qo'yib

$$\frac{dy_1}{dx_1} = \frac{ax_1 + by_1 + ah + bk + C}{a_1 x_1 + b_1 y_1 + a_1 h + b_1 k + C_1} \quad (1.10)$$

tenglamaga ega bo'lamiz.  $h$  va  $k$  larni shunday tanlab olamizki,

$$\begin{cases} ah + bk + C = 0, \\ a_1 h + b_1 k + C_1 = 0 \end{cases} \quad (1.11)$$

tenglamalar o'rini bo'lsin, ya'ni  $h$  va  $k$  larni (1.11) tenglamalar sistemasining yechimi sisfati da olamiz. Bu holda (1.10) tenglamadan bir

jinsli  $\frac{dy_1}{dx_1} = \frac{ax_1 + by_1}{a_1 x_1 + b_1 y_1}$  tenglarnani hisil qilamiz. Tenglamani yechib va  $x$  hamda  $y$  larga  $x_1 = x - h$ ,  $y_1 = y - k$  formulalar yordamida qaytib, berilgan (1.8) tenglarnaning yechimini topamiz. Agar

$$\begin{vmatrix} ab \\ a_1 b_1 \end{vmatrix} = 0$$

bo'lsa, ya'ni  $ab_1 - a_1 b = 0$  bo'lganda, rma'lumki, (1.11) sistema yechimiga ega bo'lmaydi. Amмо, bu holda  $\frac{a_1}{a} = \frac{b_1}{b} = \lambda$ , ya'ni  $a_1 = \lambda a$ ,  $b_1 = \lambda b$  bo'ladi.

Bundan kelib chiqadiki, (1.8) tenglamani

$$\frac{dy}{dx} = \frac{(ax + by) + C}{\lambda(ax + by) + C_1} \quad (1.12)$$

ko'rinishga keltirish mumkin ekan. Bu holda

$$z = ax + by \quad (1.13)$$

almashtirish yordamida tenglama o'zgaruvchilari ajraladigan differ-

ensial tenglamaga aylanadi, haqiqatdan,  $\frac{dz}{dx} = a + b \frac{dy}{dx}$  tenglikdan

$$\frac{dy}{dx} = \frac{1}{b} \cdot \frac{dz}{dx} - \frac{a}{b} \quad (1.14)$$

munschabatni hosil qilamiz hamda (1.13) va (1.14) ifodalarni (1.12) tenglamaga qo'yib, o'zgaruvchilari ajraladigan  $\frac{1}{b} \cdot \frac{dz}{dx} - \frac{a}{b} = \frac{z+C}{\lambda z + C_1}$  tenglamani hosil qilamiz.

Yuqorida (1.8) tenglamaga qo'llanilgan usulni  $\frac{dy}{dx} = f\left(\frac{ax+by+C}{a_1x+b_1y+C_1}\right)$

tenglamaga ham qo'llash mumkin, bu yerda  $f$  qandaydir uzlusiz funksiya.

**5- misol.**  $\frac{dy}{dx} = \frac{x+y-3}{x-y-1}$  tenglamani yeching.

Yechish. Tenglamani bir jinsli tenglamaga aylantirish uchun  $x=x_1+h$ ,  $y=y_1+k$  almashtirishni bajaramiz. U holda tenglama  $\frac{dy_1}{dx_1} = \frac{x_1+y_1+h+k-3}{x_1-y_1+h-k-1}$  ko'rinishni oladi.  $h+k-3=0$ ,  $h-k-1=0$  tenglamalar sistemasini yechib,  $h=2$ ,  $k=1$  ekanligini topamiz. Natijada

bir jinsli  $\frac{dy_1}{dx_1} = \frac{x_1+y_1}{x_1-y_1}$  tenglamani hosil qilamiz.  $\frac{y_1}{x_1} = u$  almashtirishni bajaraksak, u holda  $y_1=ux_1$ ,  $\frac{dy_1}{dx_1} = u + x_1 \cdot \frac{du}{dx_1}$ ,  $u + x_1 \cdot \frac{du}{dx_1} = \frac{1+u}{1-u}$

bo'ldi va natijada  $x_1 \cdot \frac{du}{dx_1} = \frac{1+u^2}{1-u}$  o'zgaruvchilari ajraladigan tenglamaga ega bo'lamiz. O'zgaruvchilarni ajratamiz:  $\frac{1-u}{1+u^2} du = \frac{dx_1}{x_1}$  ni integral lab

$$\arctg u - \frac{1}{2} \ln(1+u^2) = \ln|x_1| + \ln|C|,$$

$\arctg u = \ln |Cx_1 \sqrt{1+u^2}|$  yoki  $Cx_1 \sqrt{1+u^2} = e^{\arctg u}$  ekanligini topamiz.

$u$  orniga  $\frac{y_1}{x_1}$  ifodani qo'yib,  $C \sqrt{x_1^2 + y_1^2} = e^{\arctg \frac{y_1}{x_1}}$  ekanligini va

nihoyat,  $x$  va  $y$  o‘zgaruvchilarga o‘tib,  $C\sqrt{(x-2)^2 + (y-1)^2} = e^{\arctg \frac{y-1}{x-2}}$  natijani hosil qilamiz.

**6- misol.**  $y' = \frac{2x+y-1}{4x+2y+5}$  tenglamani yeching.

Yechish. Tenglamani  $x=x_1+h$ ,  $y=y_1+k$  almashtirish yordamida yechib bo‘lmaydi, chunki bu holda  $h$  va  $k$  larni aniqlashga yordam beradigan sistema determinanti  $\begin{vmatrix} 2 & 1 \\ 4 & 2 \end{vmatrix}$  nolga teng.

Bu tenglamani  $2x+y=z$  almashtirish yordamida o‘zgaruvchilari ajraladigan differensial tenglamaga keltirish mumkin, haqiqatan,  $y' = z - 2$  bo‘lgani uchun tenglama

$$z' - 2 = \frac{z-1}{2z+5}$$

ko‘rinishga yoki

$$z' = \frac{5z+9}{2z+5}$$

ko‘rinishga keladi. Terenglamani yechib

$$\frac{2}{5}z + \frac{7}{25} \ln |5z+3| = x + C$$

munosabatni,  $z$  o‘rniga  $2x+y$  ni qo‘yib esa

$$\frac{2}{5}(2x+y) + \frac{7}{25} \ln |10x+5y+9| = x + C \text{ yoki}$$

$$10y - 5x + 7 \ln |10x+5y+9| = C_1 \text{ ni,}$$

ya’ni  $y$  ning  $x$  ga nisbatan oshkormas ko‘rinishini hosil qilamiz.

**Quyidagi tenglamalarni yeching:**

13.  $(x^2 + 2xy)dx + xydy = 0.$

14.  $y' = \frac{y}{x} + \sin \frac{y}{x}, y(1) = \frac{\pi}{2}.$

$$15. xy' \sin\left(\frac{y}{x}\right) + x = y \sin\left(\frac{y}{x}\right).$$

$$16. xy + y^2 = (2x^2 + xy) \cdot y'.$$

$$17. xyy' = y^2 + 2x^2.$$

$$18. y' = \left(\frac{y}{x}\right) + \cos\left(\frac{y}{x}\right).$$

$$19. (x^2 + y^2)dx - xydy = 0.$$

$$20. (x + y + 2)dx + (2x + 2y - 1)dy = 0.$$

$$21. (2x + y + 1)dx + (x + 2y - 1)dy = 0.$$

$$22. 2(x + y)dy + (3x + 3y^{-1})dx = 0, y(0) = 2.$$

$$23. (x - 2y + 3)dy + (2x + y - 1)dx = 0.$$

$$24. (x - y + 4)dy + (x + y - 2)dx = 0.$$

#### 4- §. Chiziqli differensial tenglamalar. Bernulli tenglamasi

##### 1. Chiziqli differensial tenglamalar.

**Tarif.** Noma'lum funksiya va uning hosilasiga nisbatan chiziqli bo'lgan tenglama *chiziqli differensial tenglama* deyiladi. Bunday tenglama

$$\frac{dy}{dx} + P(x) \cdot y = Q(x) \quad (1.15)$$

ko'rinishga ega bo'ladi, bu yerda  $P(x)$  va  $Q(x)$  – berilgan uzlucksiz funksiyalar. (1.15) tenglama yechimini ikki funksiya ko'paytmasi ko'rinishida qidiramiz:

$$y = u(x) \cdot v(x) \quad (1.16)$$

Bu funkisiyalarning birini ixtiyoriy deb olish mumkin, ikkinchisi esa (1.15) tenglama orqali topiladi. (1.16) tenglikning ikki tomonini differensiallaymiz:

$$\frac{dy}{dx} = u \frac{dv}{dx} + v \frac{du}{dx}.$$

Topilgan  $\frac{dy}{dx}$  hosilka ifodasini (1.15) tenglamaga qo'yib,

$$u \frac{dv}{dx} + \frac{du}{dx} v + Puv = Q \quad \text{yoki} \quad u \left( \frac{dv}{dx} + Pv \right) + \frac{du}{dx} v = Q \quad (1.17)$$

bo'lishini topamiz.  $v$  funksiyani

$$\frac{dv}{dx} + Pv = 0 \quad (1.18)$$

shartni qanoatlantiradiq qilib olamiz. Bu differential tenglamada  $v$  ga nisbatan o'zgaruvchini ajratib, quyidagini topamiz:

$$\frac{dv}{v} = -Pdx, \text{ integrallab } -\ln|C_1| + \ln|v| = -\int Pdx \text{ yoki } v = C_1 e^{-\int Pdx}$$

ni hosil qilamiz.

Bizga (1.18) tenglamanning noldan farqli biror yechimi yetarli bo'lgani uchun  $v(x)$  sifati da

$$v = e^{-\int Pdx} \quad (1.19)$$

funksiyani olamiz, bu yerda  $\int Pdx$  – qandaydir boshlang'ich funksiya. Topilgan  $v(x)$  ning qismatini (1.17) tenglamaga qo'yib,

$$v(x) \frac{du}{dx} = Q(x) \text{ yoki } \frac{du}{dx} = \frac{Q(x)}{v(x)} \text{ ekanligini topamiz, bu yerdan}$$

$$u = \int \frac{Q(x)}{v(x)} dx + C$$

ni topamiz.  $u$  va  $v$  lar ni (1.16) formulaga qo'yib, nihoyat

$$y = v(x) \left[ \int \frac{Q(x)}{v(x)} dx + C \right] \quad \text{yoki} \quad y = e^{-\int Pdx} \left[ \int Q(x) e^{\int Pdx} dx + C \right] \quad (1.20)$$

ifodani, ya'ni (1.15)ning umumiy yechimini topamiz.

**1-misol.**  $\frac{dy}{dx} - \frac{2}{x+1} \cdot y = (x+1)^3$  tenglamani yeching.

Yechish.  $y = uv$  deb olsak, u holda  $\frac{dy}{dx} = u \frac{dv}{dx} + v \frac{du}{dx}$ .

$\frac{dy}{dx}$  ifodasini berilgan tenglamaga qo'ysak,

$$u \frac{dv}{dx} + \frac{du}{dx} v - \frac{2}{x+1} uv = (x+1)^3$$

yoki

$$u \left( \frac{dv}{dx} - \frac{2}{x+1} v \right) + \frac{du}{dx} v = (x+1)^3. \quad (1.21)$$

$v$  funksiyani aniqlash uchun  $\frac{dv}{dx} - \frac{2}{x+1} v = 0$  yoki  $\frac{dv}{v} = \frac{2dx}{x+1}$  tenglamani hosil qilamiz. Bu yerdan  $\ln|v| = 2\ln|x+1|$  yoki  $v = (x+1)^2$ .

$v$  ning ifodasini (1.21) tenglikka qo'yib,  $u$  ni aniqlash uchun  $(x+1)^2 \frac{du}{dx} = (x+1)^3$  yoki  $\frac{du}{dx} = x+1$  tenglamani hosil qilamiz, bu

yerda n  $u = \frac{(x+1)^2}{2} + C$ . Demak, berilgan tenglamaning umumiy yechimi  $y = \frac{(x+1)^4}{2} + C(x+1)^2$  bo'lar ekan.

## 2. Bernulli tenglamasi.

### Tarif.

$$\frac{dy}{dx} + P(x) \cdot y = Q(x) \cdot y^n, \quad n \geq 2 \quad (1.22)$$

ko'rimishdagi tenglama *Bernulli tenglamasi* deb ataladi, bu yerda  $P(x)$  va  $Q(x)$  — berilgan uzlusiz funksiyalar,  $n \neq 0; 1$ .

Tenglamaning barcha hadlarini  $y^n$  ga bo'lamiz

$$y^{-n} \frac{dy}{dx} + P(x) \cdot y^{-n+1} = Q(x) \quad (1.23)$$

va  $z = y^{-n+1}$  almashtirishni bajaramiz, u holda

$$\frac{dz}{dx} = (-n+1) \cdot y^{-n} \frac{dy}{dx}.$$

To'plig'an qiymatni (1.23) tenglamaga qo'yib,  $\frac{dz}{dx} + (-n+1)P \cdot z = (-n+1) \cdot Q$  chiziqli tenglamani hosil qilamiz. Chiziqli tenglamaning umumiy integralini topgandan so'ng,  $z$  o'miga  $y^{-n+1}$  ni qo'yib, Bernulli tenglamasining umumiy integralini hosil qilamiz.

## 2- misol. Ushbu

$$\frac{dy}{dx} + xy = x^3 \cdot y^3 \quad (1.24)$$

tenglamani yeching.

Yechish. Tenglamaning barcha hadlarini  $y^3$  ga bo'lamiz

$$y^{-3} \frac{dy}{dx} + xy^{-2} = x^3 \quad (1.25)$$

va  $z = y^{-2}$  almashtirishni bajaramiz, u holda  $\frac{dz}{dx} = -2y^{-3} \frac{dy}{dx}$ . Bu qiyatlarni (1.25) ga qo'yib

$$\frac{dz}{dx} - 2xz = -2x^3 \quad (1.26)$$

chiziqli tenglamani hosil qilamiz. Uning umumiy integralini topamiz:

$$z = uv, \frac{dz}{dx} = u \frac{dv}{dx} + v \frac{du}{dx}.$$

Bu ifodalarni (1.26) tenglamaga qo'yamiz:

$$u \frac{dv}{dx} + v \frac{du}{dx} - 2xuv = -2x^3 \text{ yoki } u \left( \frac{dv}{dx} - 2xv \right) + v \frac{du}{dx} = -2x^3.$$

Qavs ichidagi ifodani nolga tenglab,

$$\frac{dv}{dx} - 2xv = 0, \frac{dv}{v} = 2xdx, \ln|v| = x^2, v = e^{x^2}$$

ekanligini topamiz.  $u$  ni aniqlash uchun

$$e^{x^2} \cdot \frac{du}{dx} = -2x^3$$

tenglamaga ega bo'larmiz. O'zgaruvchilarni ajratib

$$du = -2e^{-x^2} x^3 dx, u = -2 \int e^{-x^2} x^3 dx + C$$

ekanligini topamiz. Oxirgi integralni bo'laklab

$$u = x^2 e^{-x^2} + e^{-x^2} + C, z = u \cdot v = x^2 + 1 + Ce^{x^2}$$

ifodalarni topamiz. Demak, berilgan tenglarning umumiy integrali

$$y^{-2} = x^2 + 1 + Ce^{x^2} \text{ yoki } y = \frac{1}{\sqrt{x^2 + 1 + Ce^{x^2}}} \text{ bo'lar ekan.}$$

**Quyidagi tenglamalarni yeching:**

$$25. y' \cos^2 x + y = \operatorname{tg} x, \quad y(0) = 0. \quad 33. y' + \frac{2y}{x} = 3x^2 y^{4/3}.$$

$$26. y' - y \operatorname{th} x = \operatorname{ch}^2 x. \quad 34. y' - \frac{y}{x-1} = \frac{y^2}{x-1}.$$

$$27. y' + \frac{xy}{1-x^2} = \arcsin x + x. \quad 35. 4xy' + 3y = -e^x \cdot x^4 y^5.$$

$$28. xy' - y = x^2 \cos x. \quad 36. y' + \frac{3x^2 y}{x^3 + 1} = y^2 (x^3 + 1) \sin x,$$

$$29. y' + 2xy = xe^{-x^2}. \quad y(0) = 1.$$

$$30. y' \cos x + y = 1 - \sin x. \quad 37. ydx + (x + x^2 y^2)dy = 0.$$

$$31. y' + \frac{y}{x} = x^2 y^4.$$

$$32. (x^2 \ln y - x)y' = y.$$

## 5- §. To'la differensiali tenglama. Integrallovchi ko'paytuvchi

### 1. To'la differensiali tenglama.

**Ta'rif.** Agar  $M(x, y)dx + N(x, y)dy = 0$  ko'rinishdagi tenglamaning chap qismi biror  $u(x, y)$  funksiyaning to'la differensiali, ya'ni

$$du = M(x, y)dx + N(x, y)dy \quad (1.27)$$

bo'lsa, u holda bunday tenglama *to'la differensiali tenglama* deyi-ladi.

(1.27) tenglama to'la differensiali tenglama bo'lishi uchun

$$\frac{\partial M}{\partial y} = \frac{\partial N}{\partial x}$$

shart bajarilishi kerak.

To“la differensialli tenglama ta’rifida  $du=0$ , bundan  $u(x, y)=C$  ekanligi kelib chiqadi ( $C$  – ixtiyoriy o‘zgarmas).

$u(x, y)$  ni topish uchun  $y$  ni o‘zgarmas deb hisoblaymiz, u holda  $dy=0$  ekanidan  $du=M(x, y)dx$  bo‘ladi. Bu tenglikni  $x$  bo‘yicha integrallasak,

$$u = \int M(x, y) dx + \varphi(y). \quad (1.28)$$

(1.28) tenglikni  $y$  bo‘yicha differensiallaysiz va natijani  $N(x, y)$  ga tenglaymiz, chunki  $\frac{\partial u}{\partial y} = N(x, y)$ ,

$$\int \frac{\partial M}{\partial y} dx + \varphi'(y) = N(x, y)$$

yoki

$$\varphi'(y) = N(x, y) - \int \frac{\partial M}{\partial y} dx. \quad (1.29)$$

(1.29) ifodani  $y$  bo‘yicha integrallab,  $\varphi(y)$  ni topamiz:

$$\varphi(y) = \int \left( N(x, y) - \int \frac{\partial M}{\partial y} dx \right) dy + C.$$

$$\text{Demak, } u(x, y) = \int M(x, y) dx + \int \left( N(x, y) - \int \frac{\partial M}{\partial y} dx \right) dy + C.$$

Bu ifodani ixtiyoriy o‘zgarmasga tenglab, tenglamaning umumiy integralini hosil qilamiz.

**1- misol.**  $(3x^2+6xy^2)dx+(6x^2y+4y^3)dy=0$  tenglamaning umumiy yechimini toping.

Yechish. Bu yerda  $M(x, y)=3x^2+6xy^2$ ,  $N(x, y)=6x^2y+4y^3$ .

$$\frac{\partial N}{\partial y} = 12xy, \quad \frac{\partial M}{\partial x} = 12xy, \quad \text{ya’ni} \quad \frac{\partial M}{\partial y} = \frac{\partial N}{\partial x}.$$

$\frac{\partial u}{\partial x} = M(x, y)$  bo‘lganligi sababli

$$\frac{\partial u}{\partial x} = 3x^2 + 6xy^2.$$

Bu tenglikni  $x$  bo‘yicha integrallaymiz:

$$u = x^3 + 3x^2y^2 + \varphi(y).$$

**Bundan**

$$\frac{\partial u}{\partial y} = 6x^2y + \varphi'(y).$$

$\frac{\partial u}{\partial y} = N(x, y)$  ekanligini hisobga olsak,

$$\varphi'(y) = 6x^2y + 4y^3 - 6x^2y \text{ yoki } \varphi'(y) = 4y^3.$$

**Bundan**

$$\varphi(y) = y^4 + C.$$

**Demak,**

$$u = x^3 + 3x^2y^2 + y^4 + C$$

yoki

$$x^3 + 3x^2y^2 + y^4 = C.$$

**2. Integrallovchi ko'paytuvchi.** Agar  $\frac{\partial M}{\partial y} \neq \frac{\partial N}{\partial x}$  bo'lsa, u holda

ba'zi bir shartlar bajarilganda, shunday  $\mu(x, y)$  funksiyani topish mumkinki,  $\mu M dx + \mu N dy = du$  bo'ladi. Bu  $\mu(x, y)$  funksiya *integrallovchi ko'paytuvchi* deyiladi.

Quyidagi hollarda integrallovchi ko'paytuvchini topish oson:

$$1) \frac{\frac{\partial M}{\partial y} - \frac{\partial N}{\partial x}}{N} = \Phi(x) \text{ bo'lganda, } \ln \mu = \int \Phi(x) dx \text{ bo'ladi.}$$

$$2) \frac{\frac{\partial N}{\partial x} - \frac{\partial M}{\partial y}}{M} = \Phi_1(y) \text{ bo'lganda, } \ln \mu = \int \Phi_1(y) dy \text{ bo'ladi.}$$

**2-misol.**  $(y + xy^2)dx - xdy = 0$  tenglamani yeching.

**Yechish.** Bu yerda  $M = y + xy^2$ ,  $N = -x$ ,  $\frac{\partial M}{\partial y} = 1 + 2xy$ ,

$$\frac{\partial N}{\partial x} = -1, \quad \frac{\partial M}{\partial y} \neq \frac{\partial N}{\partial x},$$

Demak, tenglamaning chap tomoni biror funksiyaning to'la differentiali emas. Bu tenglamaning faqat y ga bog'liq bo'lgan integrallovchi ko'paytuvchisi bormi, degan masalani qaraymiz.

$$\frac{\frac{\partial N}{\partial x} - \frac{\partial M}{\partial y}}{M} = \frac{-1-1-2xy}{y+xy^2} = -\frac{2}{y},$$

bundan

$$\ln \mu = -2 \ln y, \text{ ya'ni } \mu = \frac{1}{y^2}.$$

Berilgan tenglamani  $\mu$  ga ko'paytirganda

$$\left( \frac{1}{y} + x \right) dx - \frac{x}{y^2} dy = 0$$

tenglama hosil bo'ldi. Bu to'la differensialli tenglamadir, chunki

$$\frac{\partial M}{\partial y} = \frac{\partial N}{\partial x} = -\frac{1}{y^2}.$$

Tenglamani yechib

$$\frac{x}{y} + \frac{x^2}{2} + C = 0$$

yoki

$$y = -\frac{2x}{x^2 + 2C}$$

umumiy integralni topamiz.

**Quyidagi differensial tenglamalarning chap tomonlari to'liq differensialdan iborat ekanligi tekshirilsin va tenglamalar yechilsin:**

**38.**  $(e^x + y + \sin y)dx + (e^y + x + x \cos y)dy = 0.$

**39.**  $(x + y - 1)dx + (e^y + x)dy = 0.$

**40.**  $(x \cos y - y \sin y)dy + (x \sin y + y \cos y)dx = 0.$

**41.**  $2xydx + (x^2 - y^2)dy = 0.$

**42.**  $(2 - 9xy^2)x dx + (4y^2 - 6x^3)y dy = 0.$

**43.**  $\frac{y}{x}dx + (y^3 + \ln x)dy = 0.$

**44.**  $(10xy - 8y + 1)dx + (5x^2 - 8x + 3)dy = 0.$

**45.**  $3x^2(1 + \ln y)dx = \left(2y - \frac{x^3}{y}\right)dy.$

**46.**  $2x \cos^2 y dx + (2y - x^2 \sin^2 y)dy = 0.$

**Quyidagi differensial tenglamalarning integrallovchi ko‘paytuvchilari topilsin va tenglarnalar yechilsin:**

47.  $(x^2 - y)dx + xdy = 0.$
48.  $y^2dx + (yx - 1)dy = 0.$
49.  $(x^2 + y^2 + x)dx + ydy = 0.$
50.  $xy^2(xy' + y) = 1.$
51.  $(x^2 + 3\ln y)ydx = xdy.$
52.  $2xtgydx + (x^2 - 2\sin y)dy = 0.$
53.  $(e^{2x} - y^2)dx + ydy = 0.$
54.  $(1 + 3x^2\sin y)dx - x \operatorname{ctg} ydy = 0.$
55.  $(\sin x + e^y)dx + \cos x dy = 0.$

## **6- §. Hosilaga nisbatan yechilmagan 1-tartibli differensial tenglamalar**

*Ta’rif.*

$$F\left(x, y, \frac{dy}{dx}\right) = 0 \quad (1.30)$$

ko‘rinishdagı tenglamalar *hosilaga nisbatan yechilmagan 1-tartibli tenglama* deb ataladi.

Bunday ko‘rinishdagı tenglamani  $\frac{dy}{dx}$  ga nisbatan yechib olish maqsadga muvofiq bo‘ladi, ya’ni berilgan tenglamadan

$$\frac{dy}{dx} = f_i(x, y) \quad (i = 1, 2, \dots, n) \quad (1.31)$$

ko‘rinishdagı bir yoki bir necha hosilaga nisbatan yechilgan tenglarnalar hosil qilinadi. Ammo har doim ham (1.30) ko‘rinishdagı tenglamani  $\frac{dy}{dx}$  ga nisbatan yechib olish mumkin bo‘lavmaydi, undan tashqari  $y'$  ga nisbatan yechilgandan hosil bo‘lgan (1.31) ko‘rinishdagı tenglamalar har doim ham oson integrallanavermaydi. Shuning uchun (1.31) ko‘rinishdagı tenglamalarni ko‘pincha parametr kiritish yo‘li bilan yechiladi. Shu usulning eng oson variantlari dan biri bilan tanishib chiqamiz.

Faraz qilaylik, (1.30) tenglamani  $y$  yoki  $x$  ga nisbatan oson yechish mumkin bo‘lsin. Masalan, uni  $y = f(x, y')$  ko‘rinishda

yozib olish mumkin bo'lsin.  $\frac{dy}{dx} = p$  parametr kiritib,  $y=f(x, p)$  ni hosil qilamiz. Oxirgi tenglikning ikki tomonidan to'la differensial olib hamda  $dy$  ni  $pdx$  ga almashтирib

$$pdx = \frac{\partial f(x, p)}{\partial x} dx + \frac{\partial f(x, p)}{\partial p} dp,$$

ya'ni,  $M(x, p)dx + N(x, p)dp = 0$  ni hosil qilamiz. Agar bu tenglamaning  $x = \Phi(p, C)$  yechimini topsak, u holda berilgan tenglama ning yechimi

$$\begin{cases} x = \Phi(p, C), \\ y = f(x, p) \end{cases}$$

parametrik ko'rinishda bo'ladi.

(1.30) tenglama uchun  $y(x_0) = y_0$  Koshi masalasi  $(x_0, y_0)$  nuqtadan o'tuvchi va bu nuqtada umumiy urinmaga ega bo'lган (1.30) tenglamaning ikki integral egri chizig'i mavjud bo'lмагандагина yagona yechimga ega bo'ladi. Aks holda Koshi masalasi yechimining yagonaligi buziladi, ya'ni  $(x_0, y_0)$  nuqta Koshi masalasi yechimining yagonaligi buzilадиган nuqta bo'ladi.

(1.30) tenglama uchun Koshi masalasining yechimi mavjudligi va yagonaligining yetarлиlik shartini quyidagi teorema aniqlab beradi.

**Teorema.**  $y_0, F(x_0, y_0, y'_0) = 0$  tenglamaning yechimlaridan biri bo'lsin. Faraz qilaylik,  $F(x, y, y')$  funksiya  $x$  bo'yicha uzluksiz,  $y$  va  $y'$  bo'yicha uzluksiz differensialanuvchi hamda uning  $y'$  bo'yicha hosilasi nooldan farqli bo'lsin:

$$\frac{\partial F}{\partial y'}(x_0, y_0, y'_0) \neq 0.$$

U holda  $F(x, y, y') = 0, y(x_0) = y_0$  Koshi masalasining  $x_0$  nuqta ning yetarлиcha kichik atrofida  $\varphi'(x_0) = y'_0$  shartni qanoatlaniruvchi  $y = \varphi(x)$  yagona yechimi mavjud bo'ladi.

Hosilaga nisbatan yechilgan tenglama kabi (1.30) ko'rinishdagi tenglamalar ham maxsus yechimlarga ega bo'lishi mumkin, ya'ni

shunday yechimlarga ega bo'lishi mumkinki, bu integral chiziqlar faqat yagonalik sharti bajarilmaydigan nuqtalardan iborat bo'ladi.

Agar  $F(x, y, y')$  funksiya  $x$  ga ko'ra uzlusiz hamda  $y$  va  $y'$  ga ko'ra uzlusiz diff'rensiallanuvchi bo'lsa, (1.30) tenglamaning maxsus yechimi, agar u mavjud bo'lsa,

$$\begin{cases} F(x, y, y') = 0, \\ \frac{\partial F}{\partial y'}(x, y, y') = 0 \end{cases} \quad (1.32)$$

tenglamalar sistemasini qanoatla ntiradi.

Shuning uchun, (1.30) tenglamaning maxsus yechimlarini topish uchun (1.32) tenglamalar sistemasidan  $y'$  ni yo'qotish kerak.

**1- misol.**  $(y')^3 - 2x \cdot (y')^2 + y' = 2x$  tenglamani yeching.

**Yechish.**  $(y')^3 - 2x \cdot (y')^2 + y' - 2x = (y' - 2x)((y')^2 + 1) = 0$

bo'lganligi uchun, berilgan tenglama  $\frac{dy}{dx} - 2x = 0$  tenglamaga ekvivalent. Uning yechimlari  $y = x^2 + C$  ko'rinishga ega.

**2- misol.**  $(y')^2 + y \cdot (y - x) \cdot y' - xy^3 = 0$  tenglamani yeching.

**Yechish.** Berilgan tenglamani  $(y' + y^2) \cdot (y' - xy) = 0$  ko'rinishida yozib olish mumkin. Demak, berilgan tenglama  $y' + y^2 = 0$  va  $y' - xy = 0$  tenglamalar yig'indisiga ekvivalent. Ulardan birinchisi-

ning yechimlari  $y = 0$  va  $y = \frac{1}{x+C}$ , ikkinchisini esa  $y = C \cdot e^{\frac{x^2}{2}}$ .

Demak, berilgan tenglama yechimlari  $\left(y - \frac{1}{x+C}\right)\left(y - C \cdot e^{\frac{x^2}{2}}\right) = 0$ .

**3- misol.**  $y = (y')^2 \cdot e^y$  tenglamani yeching.

**Yechish.**  $p = y' = \frac{dy}{dx}$  parametr kiritamiz. U holda  $y = p^2 e^p$ ,

$dy = (2pe^p + p^2 e^p)dp$ . Bu yerdan  $p = 0$  yoki  $x = 2e^p + e^p(p-1) + C = e^p(p+1) + C$ .

Demak, berilgan tenglama yechimlari

$$y = 0 \text{ va } \begin{cases} x = (p+1)e^p + C, \\ y = p^*e^p. \end{cases}$$

**4- misol.**  $\ln y' + \sin y' - x = 0$  tenglamani yeching.

Yechish.  $y' = p$  deb olsak,  $x = \ln p + \sin p dy = pdx$  bo'lgani uchun  $\frac{dy}{p} = \left( \frac{1}{p} + \cos p \right) dp$ . Bu yerdan  $y = \int (1 + p \cos p) dp = = p + \cos p + p \sin p + C$ . Demak, berilgan tenglama yechimlari

$$\begin{cases} x = \ln p + \sin p, \\ y = p + \cos p + p \sin p + C. \end{cases}$$

**5- misol.**  $(y')^2 + (x + a)y' - y = 0$  tenglamani yeching.

Yechish.  $p = y'$  parametr kiritamiz, u holda  $y = p^2 + (x + a)pdy = = pdx$  va  $dy = 2pdp + (x + a)dp + pdx$  tenglamalardan  $pdx = 2pdp + + (x + a)dp + pdx$ ,  $(2p + x + a)dp = 0$  tenglamalarni hosil qilamiz. Bu yerdan  $p = C$  yoki  $2p + x + a = 0$  tenglamalar kelib chiqadi. Demak, berilgan tenglama yechimlari quyidagi ko'rinishga ega bo'ladi:

$$y = (x + a) \cdot C + C^2 \text{ va } \begin{cases} y = p^2 + (x + a)p, \\ 2p + x + a = 0. \end{cases}$$

Oxirigi ikki tenglikdan  $p$  parametrni yo'qotib,  $y = C(x + a) + C^2$  va  $y = -\frac{(x+a)^2}{4}$  ekanligini hosil qilamiz.

**Quyidagi tenglamalarni yeching:**

56.  $(y')^2 = y^3 - y^2$ .      61.  $(3x+1)(y')^2 - 3(y+2)y' + 9 = 0$ .

57.  $(y')^2 + y^2 (\ln^2 y - 1) = 0$ .      62.  $x^2 (y')^2 - 2xyy' - x^2 = 0$ .

58.  $(y')^3 + x(y')^2 - y = 0$ .      63.  $x^4 (y')^2 - xy' - y = 0$ .

59.  $x(y')^3 - y(y')^2 + 1 = 0$ .      64.  $y(y')^2 - 2xy' + y = 0$ .

60.  $x(y')^2 + xy' - y = 0$ .      65.  $\ln y' + 2(xy' - y) = 0$ .

## 7- §. *n*- darajali 1-tartibli tenglama

Chap tomoni  $y'$  ga nisbatan butun ratsional funksiyadan iborat, ya'ni quyidagi

$$(y')^n + P_1(y')^{n-1} + P_2(y')^{n-2} + \dots + P_{n-1}y' + P_n = 0$$

ko'rinishga ega bo'lgan tenglama *n*-darajali 1-tartibli tenglama deyiladi. Bu yerda *n*- butun musbat son,  $P_1, P_2, P_3, \dots, P_n$  lar  $x$  va  $y$  ning funksiyalari.

Bu tenglamani  $y'$  ga nisbatan echa olamiz, deb faraz qilaylik. Bundan  $y'$  uchun, umuman aytganda, *n* ta har xil ifoda hosil bo'ladi:

$$y' = f_1(x, y), \quad y' = f_2(x, y), \dots, \quad y' = f_n(x, y). \quad (1.33)$$

**Bu holda**

$$F(x, y, y') = 0 \quad (1.34)$$

tenglamani integrallash birinchi tartibli *n* ta

$$y' = f(x, y) \quad (1.35)$$

tenglamani integrallashga keltirildi. Ularni umumiy integrallari mos ravishda quyidagilar bo'lsin:

$$\Phi_1(x, y, C_1) = 0, \quad \Phi_2(x, y, C_2) = 0, \dots, \quad \Phi_n(x, y, C_n) = 0. \quad (1.36)$$

**Bu** integralarning chap tomonlarini o'zaro ko'paytirib, nolga tenglaymiz:

$$\Phi_1(x, y, C_1) \cdot \Phi_2(x, y, C_2) \cdot \dots \cdot \Phi_n(x, y, C_n) = 0. \quad (1.37)$$

Agar (1.37) tenglamani  $y$ ga nisbatan yechadigan bo'lsak, (1.34) tenglamaning yechimini hosil qilamiz, haqiqatan ham, (1.34) tenglamaning har qanday yechimi (1.37) tenglamalarning birini, binobarin, (1.35) tenglamalarning birortasini va shunday qilib, (1.34) tenglama (1.35) tenglamalarga yoyilgani uchun uni ham qanoatlantiradi. Umurniylikka ziyon keltirmasdan, (1.37) dagi barcha  $C_1, C_2, \dots, C_n$  o'zgarmaslarni bitta  $C$  bilan almashtirish va tenglamani

$$\Phi_1(x, y, C) \cdot \Phi_2(x, y, C) \cdot \dots \cdot \Phi_n(x, y, C) = 0 \quad (1.38)$$

ko'rinishda yozish mumkin. Bu esa (1.34) tenglamaning yechimi bo'ladi. Bunga ishonch hosil qilish uchun (1.38) tenglamaning *n* ta tenglamaga ajralishini ko'rish mumkin:

$$\Phi_1(x, y, C) = 0, \quad \Phi_2(x, y, C) = 0, \dots, \quad \Phi_n(x, y, C) = 0, \quad (1.39)$$

bu yerda  $C$  – istalgan qiymatlarni qabul qiluvchi ixtiyoriy o‘zgarmas, shu sababli (1.36) tenglamadan hosil qilinadigan barcha yechimlar (1.39) tenglamada n hosil qilinadigan yechimlar orasida bo‘ladi.

**1- misol.**  $(y')^2 - \frac{xy}{a^2} = 0$  tenglamaning umumiy integralini toping.

Yechish. Tenglama ning chap tomonini ko‘paytuvchilarga ajratib, quyidagini hosil qilamiz:

$$\left(y' - \frac{\sqrt{xy}}{a}\right) \cdot \left(y' + \frac{\sqrt{xy}}{a}\right) = 0, \quad \text{bu yer dan } y' - \frac{\sqrt{xy}}{a} = 0 \text{ va } y' + \frac{\sqrt{xy}}{a} = 0.$$

Bu ikkala tenglama o‘zgaruvchilari ajraladigan tenglamadir. Ularning umumiy integrallari

$$\sqrt{y} - \frac{x\sqrt{x}}{3a} - C = 0, \quad \sqrt{y} + \frac{x\sqrt{x}}{3a} - C = 0.$$

Shuning uchun berilgan tenglamaning umumiy integrali ushbu ko‘rinishda bo‘ladi:

$$(\sqrt{y} - C)^2 - \frac{x^3}{9a^2} = 0.$$

### Quyidagi tenglamalar yechilsin:

66.  $(y')^3 - 2x(y')^2 + y' = 2x.$

73.  $8(y')^3 = 27y.$

67.  $(y')^2 + y(y - x)y' - xy^3 = 0.$

74.  $(y'+1)^3 = 27(x+y)^2.$

68.  $(y')^2 + (\sin x - 2xy)y' - xy^3 = 0.$

75.  $y^2(y'^2+1) = 1.$

69.  $(y')^2 = 4.$

76.  $(y')^2 - 4y^3 = 0.$

70.  $(y')^2 + y^2 - 1 = 0.$

77.  $x(y')^2 = y.$

71.  $x(y')^2 - 2yy' + 4x = 0.$

78.  $y(y')^3 + x = 1.$

72.  $(y')^2 - y^2 = 0.$

79.  $4(1-y) = (3y-2)^2(y')^2.$

### 8- §. $F(y, y') = 0$ va $F(x, y') = 0$ ko‘rinishidagi tenglamalar

Bu tenglamalardan  $y$  ni (birinchi tenglamadan) yoki  $x$  ni (ikkinchi tenglamadan), shuningdek  $p = y'$  ni t parametr orqali ifodalash mumkin, deb faraz qilamiz. Bu yerda tenglamaning umumiy yechimi parametrik shaklda hosil bo‘ladi.

Masalan,  $F(y, p)=0$  tenglama bo'lgan holni ko'raylik.  $y=\varphi(t)$  deb tenglamadan  $p=\psi(t)$  ni yoki, aksincha,  $p=\varphi'(t)$  deb tenglamadan  $y=\varphi(t)$  ni topdik, deb faraz qilaylik. U holda bir tomonidan,  $dy=pdx=\psi(t)dx$ , ikkinchi tomondan,  $dy=\varphi'(t)dt$ .  $dy$  uchun ikkala ifod ani taqoslab,  $\psi(t)dx=\varphi'(t)dt$  ni hosil qilamiz, bundan:

$$dx = \frac{\varphi'(t)}{\psi(t)} dt \quad \text{va} \quad x = \int \frac{\varphi'(t)}{\psi(t)} dt + C.$$

**Umumiy yechim parametrik shaklda quyidagicha yoziladi:**

$$\begin{cases} x = \int \frac{\varphi'(t)}{\psi(t)} dt + C, \\ y = \varphi(t). \end{cases}$$

**1- misol.**  $y = a\sqrt{1 + (y')^2}$  tenglamaning umumiy yechimini toping.

Yechish.  $p=y'=sh t$  deymiz, u holda  $y = a\sqrt{1 + sh^2 t} = a \cdot ch t$ ,  $\frac{dy}{dx} = p$  dan  $dx = \frac{dy}{p}$  ni topamiz.  $dy=a sh t dt$  bo'lganligidan  $dx=adt$  va  $x=at - C$ .

Umumiy yechim parametrik shaklda quyidagicha yoziladi:

$$\begin{cases} x = at - C, \\ y = a ch t. \end{cases}$$

Bunda n  $t$  parametrni yo'qotamiz.  $t = \frac{x+C}{a}$  bo'lganligidan  $y = a ch \frac{x+C}{a}$ .

**Quyida gi tenglamalar yechilsin:**

**80.**  $x(y'^2 - 1) = 2y'$ .

**85.**  $y = \ln(1+y'^2)$ .

**81.**  $y'(x - \ln y') = 1$ .

**86.**  $(y'+1)^3 = (y' - y)^2$ .

**82.**  $x = y'^3 + y'$ .

**87.**  $y = (y' - 1)e^{y'}$ .

**83.**  $x = y'\sqrt{y'^2 + 1}$ .

**88.**  $(y')^4 - (y')^2 = y^2$ .

**84.**  $y = y'^2 + 2y'^3$ .

**89.**  $(y')^2 - (y')^2 = y^2$ .

## 9- § - Lagranj va Klero tenglamalari

### 1. Lagranj tenglamasi. Ushbu

$$y = x\phi(y') + \psi(y') \quad (1.40)$$

tenglama *Lagranj tenglamasi* deyiladi, bu yerda  $\phi(y')$ ,  $\psi(y')$  lar  $y'$  ning ma'lum funksiyalari. Bunday tenglama ham  $p$  parametr kiritish usulii b'ilan yechiladi.  $y' = p(x)$  deb belgilaymiz. U holda tenglama ushbu ko'rinishga keladi:

$$y = x\phi(p) + \psi(p). \quad (1.41)$$

Oxirgi tenglamani  $x$  bo'yicha differensiallab,

$$p = \phi(p) + (x\phi'(p) + \psi'(p)) \frac{dp}{dx}$$

yoki

$$p - \phi(p) = (x\phi'(p) + \psi'(p)) \frac{dp}{dx} \quad (1.42)$$

tenglamani hosil qilamiz.  $p - \phi(p) \neq 0$  va  $p - \psi(p) = 0$  bo'lgan holalarni qaraymiz:

a)  $p - \phi(p) \neq 0$  bo'lsin. (1.42) tenglamani  $\frac{dp}{dx}$  ga nisbatan yechib, quyidagi ko'rinishda yozamiz:  $\frac{dx}{dp} - x \frac{\phi'(p)}{p - \phi(p)} = \frac{\psi'(p)}{p - \phi(p)}$ .

Hosil qilingan tenglama  $x$  va  $\frac{dx}{dp}$  ga nisbatan chiziqlidir, demak,

$$x = \Phi(p, C) \quad (1.43)$$

umumiylar yechimga ega. (1.43) ni (1.41) ga qo'yib,  $y$  ni  $p$  va  $C$  orqali ifodalaymiz:

$$y = \Phi(p, C) \cdot \phi(p) + \psi(p) = f(p, C). \quad (1.44)$$

(1.43) va (1.44) bizga Lagranj tenglamasining umumiylar yechimini parametrik ko'rinishda beradi:  $\begin{cases} x = \Phi(p, C), \\ y = f(p, C). \end{cases}$

Bu sistemada  $p$  parametrni yo'qotib, Lagranj tenglamasining umumiylar yechimini quyidagi ko'rinishda hosil qilamiz:

$$F(x, y, C) = 0.$$

Tenglamaning umumiy yechimidan hosil bo'lmaydigan maxsus yechimi ham bo'lishi mumkin.

b)  $p - \varphi(p) = 0$  bo'lsin, ya'ni biror  $p=p_0$  da  $\varphi(p_0)=p_0$  bo'lsin. Ushbu

$$\begin{cases} y = x\varphi(p) + \varphi(p), \\ p = p_0 \end{cases}$$

sistemada  $p$  ni yo'qotib,  $y = x\varphi(p_0) + \psi(p_0)$  yechimni hosil qilamiz. Bu esa Lagranj tenglamasining maxsus yechimidir.

**1- misol.** Ushbu  $y = x + (y')^3$  Lagranj tenglamasining umumiy va maxsus yechimlarini toping.

Yechish. Bu tenglamada  $y'$  ni  $p(x)$  ga almashtirib,

$$y = x + p^3 \quad (1.45)$$

tenglamani hosil qilamiz. Uni  $x$  bo'yicha differensiallaymiz:

$$p = 1 + 3p^2 \frac{dp}{dx}. \text{ Bundan } p - 1 = 3p^2 \frac{dp}{dx}.$$

a) Agar  $p - 1 \neq 0$  bo'lsa, ushbu

$$dx = \frac{3p^2}{p-1} dp$$

tenglamani integrallab, quydagini hosil qilamiz:

$$x = 3(\ln|p-1| + p + \frac{p^2}{2}) + C, \quad (1.46)$$

$x$  ning hosil qilingan ifodasini (1.45)ga qo'yamiz:

$$y = 3(\ln|p-1| + p + \frac{p^2}{2}) + C + p^3.$$

(1.45) va (1.46) lar Lagranj tenglamasining umumiy yechimini parametr ko'rinishida beradi.

b) Agar  $p - 1 = 0$  bo'lsa,  $p = 1$  qiymatni (1.45) tenglamaga qo'yib,  $y = x+1$  maxsus yechimni hosil qilamiz.

**2. Klero tenglamasi.** Klero tenglamasi deb, Lagranj tenglamasining  $\varphi(y') = y'$  bo'lgan holiga aytildi. Klero tenglamasining umumiy ko'rinishi quydigicha bo'ladi:

$$y = xy' + \psi(y'). \quad (1.47)$$

$y' = p(x)$  deb olsak, (1.47) tenglama quyidagi cha ko'rinishga keladi:

$$y = xp + \psi(p). \quad (1.48)$$

$x$  bo'yicha differentsiallab, quyidagini topamiz:

$y' = p + x \frac{dp}{dx} + \psi'(p) \frac{dp}{dx}$ , ya'ni  $\frac{dp}{dx}[x + \psi'(p)] = 0$ , bu yerdan  $\frac{dp}{dx} = 0$  yoki

$$x + \psi'(p) = 0. \quad (1.49)$$

$\frac{dp}{dx} = 0$  tenglama dan  $p = C$  kelib chiqadi, (1.48) da  $p$  o'rniga  $C$  ni qo'yib, Klero tenglarnasi ning umumi yechimini hosil qilamiz:

$$y = Cx + \psi(C). \quad (1.50)$$

Bu geometrik nuqtai nazardan to'g'ri chiziqlar oilasini tasvirlaydi.

(1.49) tenglama (1.48) bilan birgalikda Klero tenglarnasi ning parametrik shakldagi yechimini beradi:

$$\begin{cases} x = -\psi'(p), \\ y = -p\psi'(p) + \psi(p). \end{cases}$$

Haqiqatan ham, bu tenglamalar dan:  $dx = -\psi''(p)dp$ .

$$dy = [-p\psi''(p) - \psi'(p) + \psi'(p)]dp = -p\psi''(p)dp, \text{ bu yerdan } \frac{dy}{dx} = p.$$

Buni Klero tenglamasiiga qo'yish  $-p\psi'(p) + \psi(p) = -p\psi'(p) + \psi(p)$  ayniyatga olib keladi.

Sistemaning ikkala tenglamsidan  $p$  parametrni yo'qotib, (1.47) tenglamani integrali  $\Phi(x, y)=0$  ni hosil qilamiz. Bu integralda  $C$  ishtirok etmaydi, buningda, umumiy integral bo'la olmaydi. Uni, shuningdek, umumiy integraldan  $C$  ning hech qanday qiymatida hosil qilib bo'lmaydi, chunki chiziqli funksiya bo'lmasligi uchun u maxsus integral deyiladi.

**2- misol.** Ushbu  $y = xy' + y' - (y')^2$  Klero tenglarnasi ning umumi yechimlarini toping.

Yechish. Klero tenglarnasi ning umumi yechimini  $y'$  ni  $C$  bilan almashtirib topamiz:

$$y = Cx + C - C^2.$$

Bu tenglamani  $C$  bo'yicha differensialaymiz:

$$0 = x + 1 - 2C.$$

Quyidagi

$$\begin{cases} y = Cx + C - C^2, \\ 0 = x + 1 - 2C \end{cases}$$

sistemadan  $C$  ni yo'qotib.

$$y = \frac{1}{4}(x+1)^2$$

maxsus yechimni hosil qilamiz. U parabola bo'lib,  $y = Cx + C - C^2$  umumiy yechimlar oilasining o'ramasini tashkil qiladi.

**Lagranj tenglamalarining umumiy va maxsus integrallarini toping:**

90.  $y = xy' - (y')^2$ .

99.  $y = xy' - (y')^2$ .

91.  $y = 2xy' + \frac{1}{(y')^2}$ .

100.  $y = xy' - a\sqrt{1 + (y')^2}$ .

92.  $2y = \frac{x(y')^2}{y'^2 + 2}$ .

101.  $y = xy' + \frac{1}{2y}$ .

93.  $y = x(y')^2 + (y')^2$ .

102.  $\sqrt{(y')^2 + 1} + xy' - y = 0$ .

94.  $y' + y = x(y')^2$ .

103.  $y = xy' - e^{y'}$ .

95.  $y + xy' = 4\sqrt{y'}$ .

104.  $y = xy' - (2 + y')$ .

96.  $y = x(y')^2 - 2(y')^3$ .

105.  $(y')^3 = 3(xy' - y)$ .

97.  $2xy' - y = \ln y'$ .

106.  $2(y')^2(y - xy') = 1$ .

98.  $xy'' - y = \ln y'$ .

107.  $y = x\left(\frac{1}{x} + y'\right) + y'$ .

## 10- §. Rikkati tenglamasi

Us hbu

$$\frac{dy}{dx} = P(x)y^2 + Q(x)y + R(x) \quad (1.50)$$

ko'rinishdagi tenglama *Rikkatining umumiy tenglamasi* deyiladi. Bu yerda  $P(x)$ ,  $Q(x)$ ,  $R(x)$  – biror  $a < x < b$  oraliqda o'zgaruvchi  $x$  ning uzluksiz fu nksiyalari ( $-\infty < a, b < +\infty$ ).

Tenglamada  $P(x) = 0$  bo'lsa, chiziqli tenglama;  $R(x) = 0$  bo'lsa Bernulli tenglamasi hosil bo'ladidi.

O'zgaruvchilarni quyidagi ha almashtirish natijasida Rikkati tenglamasi o'z ko'rinishini saqla ydi:

1)  $x$  erkli o'zgaruvchi ni ixtiyoriy  $x = \varphi(x_1)$  ko'rinishda ( $\varphi$  – differensiallanuvchi funksiya) o'zgartirish natijasida tenglamaniнg ko'rinishi o'zgarmaydi.

Haqiqatan ham, (1.50) tenglamada bu almashtirishni bajarib, yana Rikkati tenglamasini olamiz:

$$\frac{dy}{dx} = P[\varphi(x_1)]\varphi'(x_1)y^2 + Q[\varphi(x_1)]\varphi'(x_1)y + R[\varphi(x_1)]\varphi'(x_1);$$

2)  $y$  erksiz o'zgaruvchini kasr chiziqli  $y = \frac{\alpha y_1 + \beta}{\gamma y_1 + \delta}$  ko'rinishda ( $\alpha, \beta, \gamma, \delta$  – qaralayotgan oraliqda  $\alpha\delta - \beta\gamma \neq 0$  shartni qanoatlantiruvchi  $x$  ning ixtiyoriy differensiallanuvchi funksiyalarini) almashtirish natijasida ham tenglama o'z ko'rinishini saqlaydi:

$$\frac{dy}{dx} = \frac{(\alpha \frac{dy_1}{dx} + \alpha'y_1 + \beta') \cdot (\gamma y_1 + \delta) - (\gamma \frac{dy_1}{dx} + \gamma'y_1 + \delta') \cdot (\alpha y_1 + \beta)}{(\gamma y_1 + \delta)^2} =$$

$$= \frac{(\alpha\delta - \beta\gamma) \frac{dy_1}{dx} + (\alpha'\gamma - \gamma'\alpha) y_1^2 + (\alpha'\delta + \beta'\gamma - \alpha\delta' - \beta\gamma') y' + (\beta'\delta - \delta'\beta)}{(\gamma y_1 + \delta)^2}.$$

Natijani (1.50) tenglamaga qo'yساқ, yana Rikkati tenglamasi hosil bo'lganiga ishonch hosil qilamiz.

Erkli o'zgaruvchi  $x$  yoki erksiz o'zgaruvchi  $y$  ning bunday shakl almashtirishlarini bajarib, Rikkati tenglamasi soddaroq (kanonik) ko'rinishga keltiriladi.

1) Tenglamada  $y^2$  oldidagi koeffitsiyentni  $y=w(x)z$  chiziqli almashtirish orqali ±iga tenglashtirish mumkin. Bu yerda  $w(x)$  hozircha noma'lum funksiya, tegishli hosilalarni topib (1.50) tenglamaga qo'yamiz, u holda

$$w \frac{dz}{dx} + zw' = P(x)w^2 z^2 + Q(x)wz + R(x)$$

yoki

$$\frac{dz}{dx} = P(x)wz^2 + \left(Q(x) - \frac{w'}{w}\right)z + \frac{R(x)}{w}.$$

Agar  $w = \pm \frac{1}{P(x)}$  deb olinsa, tenglama ushbu ko'rinishga keladi:

$$\frac{dz}{dx} = \pm z^2 + \left(Q(x) - \frac{P'(x)}{P(x)}\right)z \pm P(x) \cdot R(x).$$

Bu almashtirish  $x$  ning  $P(x) \neq 0$  bo'lgan o'zgarish oralig'i uchun o'rinnlidir.

2) Tenglamada qidirilayotgan  $y$  funksiya oldidagi koeffitsiyentni  $y = u + \alpha(x)$  almashtirish orqali nolga teng holga keltirish mumkin.

Tegishli hosilalarini topib, (1.50) tenglamaga qo'yamiz, u holda

$$\frac{du}{dx} = P(x)u^2 + [Q(x) + 2P(x)\alpha(x)]u + R(x) + P(x)\alpha^2.$$

$u$  oldidagi koeffitsiyentning 0 ga teng bo'lishi uchun  $\alpha(x) = -\frac{Q(x)}{2P(x)}$ , ( $P(x) \neq 0$ ) qilib tanlab olish kifoyadir.

Keltirilgan almashtirishlarni birgalikda qo'llab, Rikkati tenglamasini  $\frac{dy}{dx} = \pm y^2 + R(x)$  ko'rinishda yozish mumkin.

**1- misol.** Ushbu  $\frac{dy}{dx} = y^2 + \frac{1}{2x^2}$  tenglamani yeching.

**Yechish.**  $y = \frac{1}{z}$  almashtirishni bajarib, tenglamani

$\frac{dz}{dx} = -1 - \frac{1}{2} \left(\frac{z}{x}\right)^2$  shaklga keltiramiz. Bu bir jinsli tenglamani yechish-

da  $\frac{z}{x} = u$  belgilashdan foydalanamiz. U holda  $u + x \frac{du}{dx} = -1 - \frac{1}{2} u^2$ ;

$\frac{du}{u^2 + 2u + 2} = -\frac{dx}{2x}$ ;  $\frac{du}{(u+1)^2} = -\frac{dx}{2x}$  tenglikni integrallab,

$$\operatorname{arcg}(1+u) = \frac{1}{2} \ln x + C$$

yoki

$$u + 1 = \operatorname{tg} \left( C - \frac{1}{2} \ln x \right),$$

$$z = x \left[ -1 + \operatorname{tg} \left( C - \frac{1}{2} \ln x \right) \right]$$

ifodaga ega bo'lamiz. Demak, izlangan yechim quyidagicha bo'ladi:

$$y = \frac{1}{x \left[ -1 + \operatorname{tg} \left( C - \frac{1}{2} \ln x \right) \right]}.$$

Quyidagi tenglamalrni yeching:

108.  $y' + ay^2 - axy - 1 = 0.$

113.  $y' - 2xy + y^2 = 5 - x^2.$

109.  $y' + y^2 = 2/x^2.$

114.  $y' + 2ye^x - y^2 = e^{2x} + e^x.$

110.  $xy^2 + xy + x^2y^2 = 4.$

115.  $3xy' - (2x+3)y + y^2 = -x^2.$

111.  $3y' + y^2 + 2/x^2 = 0.$

116.  $2xy' - (3x+2)y + y^2 = -2x^2.$

112.  $xy' - (2x+1)y + y^2 = -x^2.$

117.  $5xy' - (4x+5)y + y^2 = -3x.$

---

---

## II BOB

### YUQORI TARTIBLI DIFFERENSIAL TENGLAMALAR

#### 1- §. Asosiy tushunchalar

*n*-tartibli oddiy differensial tenglama deb,

$$F(x, y, y', y'', \dots, y^{(n)}) = 0 \quad (2.1)$$

ko'rinishdagi tenglamaga aytildi.

Bu tenglamaning yechimi deb, *n* marta differensiallanuvchi va (2.1) tenglamaga qo'yish natijasida uni ayniyatga aylantiruvchi  $y = \varphi(x)$  funksiyaga aytildi, ya'ni.

$$F[x, \varphi(x), \varphi'(x), \varphi''(x), \dots, \varphi^{(n)}(x)] = 0.$$

**Koshi masalasi.** (2.1) tenglamaning

$$y(x_0) = y_0, \quad y'(x_0) = y'_0, \quad y''(x_0) = y''_0, \quad \dots, \quad y^{(n)}(x_0) = y^{(n)}_0 \quad (2.2)$$

boshlang'ich shartlarni qanoatlaniruvchi yechimi topilsin.

$$y = \varphi(x, C_1, C_2, \dots, C_n)$$

funksiya (2.1) tenglamaning umumiy yechimi bo'lsin.  $C_1, C_2, \dots, C_n$  o'zgarmas sonlarni (2.2) Koshi shartlari orqali aniqlab, tegishli xususiy yechim hosil qilinadi.

Umumiy yechimdan xususiy yechimni hosil qilishda qaralayotgan oral iqning chetki nuqtalarida berilgan chegaraviy shartlardan ham foydalaniлади.

Koshi shartlari deb ataluvchi boshlang'ich shartlar soni tenglamining tartibi bilan teng bo'lishini ta'kidlab o'tamiz.

*n*-tartibli differensial tenglamani faqat ayrim xususiy hollarda gina bevosita integrallash mumkin.

## Tartibini pasaytirish mumkin bo'lgan tenglamalar

### 2- §. $y^{(n)} = f(x)$ ko'rinishdagi tenglama

Bunday ko'rinishdagi tenglamani  $n$  marta ketma-ket integrallash natijasida umumiy yechimi topiladi:

$$y^{(n)} = f(x), \quad (2.3)$$

$$y^{(n-1)} = \int f(x)dx + C_1 = f_1(x) + C_1,$$

$$\begin{aligned} y^{(n-2)} &= \int [f_1(x) + C_1] dx + C_2 = f_2(x) + C_1x + C_2, \\ &\dots \end{aligned}$$

$$y = f_n(x) + \frac{C_1}{(n-1)!} x^{n-1} + \frac{C_2}{(n-2)!} x^{n-2} + \dots + C_{n-1}x + C_n, \quad (2.4)$$

bu yerda  $f_n(x) = \int \int \dots \int f(x)dx^n$ .  $\frac{C_1}{(n-1)!}, \frac{C_2}{(n-2)!}, \dots, C_n$  lar o'zgarmas sonlar bo'lgani uchun (2.4) ni quyidagicha ham yozish mumkin:

$$y = f_n(x) + C_1x^{n-1} + C_2x^{n-2} + \dots + C_{n-1}x + C_n.$$

**1-misol.**  $y''' = \sin x$  tenglamani umumiy yechimi topilsin.

Yechish.  $y''' = \frac{dy''}{dx}$  ekanligini e'tiborga olib, berilgan tenglamani  $\frac{dy''}{dx} = \sin x$  yoki  $dy'' = \sin x dx$  ko'rinishda yozish mumkin. Ketma-ket integrallab, quyidagiga ega bo'lamiz:

$$y'' = \int \sin x dx + C_1 = -\cos x + C_1,$$

$$y' = \int (-\cos x + C_1) dx + C_2 = -\sin x + C_1x + C_2,$$

$$y = \int (-\sin x + C_1x + C_2) dx + C_3 = \cos x + \frac{1}{2}C_1x^2 + C_2x + C_3$$

Demak,  $y = \cos x + Cx^2 + C_2x + C_3$ ,  $C = \frac{1}{2}C_1$ .

Izlangan umumiy yechimga ega bo'ldik.

**2- misol.**  $y'' = xe^{-x}$  tenglamaniň  $y(0) = 1$ ,  $y'(0) = 0$  boshlang'ich shartlarni qanoatlantiruvchi yechimi topilsin.

**Yechish.** Berilgan tenglamani ketma-ket integrallash natija-sida umumi yechimni aniqlaymiz:

$$y' = \int xe^{-x} dx + C_1 = -xe^{-x} - e^{-x} + C_1,$$

$$y = \int (-xe^{-x} - e^{-x} + C_1) dx + C_2 = xe^{-x} + e^{-x} + e^{-x} + C_1 x + C_2$$

yoki

$$y = e^{-x}(x + 2) + C_1 x + C_2.$$

Boshlang'ich shartlarni e'tiborga olsak,

$$1 = e^{-0}(0 + 2) + C_1 \cdot 0 + C_2, C_2 = -1,$$

$$y' = -xe^{-x} - e^{-x} + C_1$$

$$\text{dan } 0 = -0e^{-0} - e^{-0} + C_1, C_1 = 1.$$

Demak, izlangan xususiy yechim quyidagi ko'rinishda bo'ladi:

$$y = e^{-x}(x + 2) + x - 1.$$

**Quyidagi tenglamalarni yeching:**

**118.**  $y'' = \cos^2 x$ ,  $y(0) = \frac{1}{32}$ ,  $y'(0) = 0$ ,  $y''(0) = \frac{1}{8}$ ,  $y'''(0) = 0$ .

**119.**  $y''' = x \sin x$ ,  $y(0) = 0$ ,  $y'(0) = 0$ ,  $y''(0) = 2$ .

**120.**  $y''' \sin^4 x = \sin 2x$ .

**121.**  $y'' = 2 \sin x \cos^2 x - \sin^3 x$ .

**122.**  $y''' = xe^{-x}$ ,  $y(0) = 0$ ,  $y'(0) = 2$ ,  $y''(0) = 2$ .

**123.**  $y''' = \frac{6}{x^3}$ ,  $y(1) = 2$ ,  $y'(1) = 1$ ,  $y''(1) = 1$ .

**124.**  $y'' = 4 \cos 2x$ ,  $y(0) = 0$ ,  $y'(0) = 0$ .

**125.**  $y'' = \frac{1}{1+x^2}$ .

$$126. \quad y'' = \frac{1}{\cos^2 x}, \quad y\left(\frac{\pi}{4}\right) = \ln \sqrt{2}, \quad y'\left(\frac{\pi}{4}\right) = 1.$$

$$127. \quad y''' = x^{-2}.$$

$$128. \quad y^{IV} = \cos x.$$

$$129. \quad y'' = \frac{1}{\sin^2 x}.$$

$$130. \quad y'' = xe^x, \quad y(0) = 1, \quad y'(0) = 2.$$

$$131. \quad y'' = \sin 2x, \quad y(0) = 6, \quad y'(0) = 0.$$

### 3- §. Norma'lum funksiya oshkor holda qatnashmagan tenglamalar

$$F(x, y^{(k)}, y^{(k+1)}, \dots, y^{(n)}) = 0 \quad (2.5)$$

tenglamada  $y$  funksiya oshkor holda qatnashmagan. Bu tenglamada

$$y^{(k)} = p(x) \quad (2.6)$$

almashtirishni bajarib, uni

$$F(x, p, p', \dots, p^{n-k}) = 0$$

ko'rinishga keltiriladi. Shunday qilib, (2.5) tenglamani tartibi  $k$  birlikka pasayadi.

**1-misol.**  $xy'' = y' \ln\left(\frac{y'}{x}\right)$  tenglamaning umumiyl yechimi topilsin.

**Yechish.** Bu tenglamada  $y$  funksiya oshkor holda qatnashmagan uchun  $y' = p(x)$  almashtirishni bajaramiz. Bu holda  $y'' = p'$  o'rinali bo'ladi. Bulamiz tenglama ga qo'ysak,

$$x \cdot p' = p \ln \frac{p}{x} \quad \text{yoki} \quad p' = \frac{p}{x} \ln \frac{p}{x}.$$

Hosil bo'lgan tenglama birinchchi tartibili bir jinsli tenglama bo'lidan  $\frac{p}{x} = t$  yoki  $p = x \cdot t$  almashtirishni bajarsak,  $p' = t + xt'$  ga

ega bo'lamiz. Buni e'tiborga olib, tenglamani  $t + xt' = t \ln t$  yoki  $xt' = t(\ln t - 1)$  ko'rinishda yozish mumkin. O'zgaruvchilarni ajrat-sak,

$$\frac{dt}{t(\ln t - 1)} = \frac{dx}{x}$$

tenglamaga ega bo'lamiz. Integrallash natijasida

$$\ln(\ln t - 1) = \ln x + \ln C_1 \quad \text{yoki} \quad \ln t - 1 = C_1 x ,$$

bundan esa  $t = e^{C_1 x + 1}$  kelib chiqadi.  $t = \frac{p}{x}$  ekanini e'tiborga olsak,

$$p = xe^{C_1 x + 1}$$

hosil bo'ladi.  $p(x) = y'$  dan  $y' = xe^{C_1 x + 1}$  tenglik hosil bo'ladi. Bundan esa izlangan umumiy yechim

$$y = \int xe^{C_1 x + 1} dx = \frac{1}{C_1} xe^{C_1 x + 1} - \frac{1}{C_1^2} e^{C_1 x + 1} + C_2$$

ko'rinishda hosil bo'ladi.

**2- misol.**  $y''(x-1) - y'' = 0$  tenglamaning  $y(2) = 1$ ,  $y'(2) = 1$ ,  $y''(2) = 1$  shartlarni qanoatlaniruvchi yechimi topilsin.

**Yechish.**  $y'' = p(x)$  va  $y''' = p'$  almashtirish bajarsak, dastlabki tenglama  $p'(x-1) = p$  yoki  $\frac{dp}{p} = \frac{dx}{(x-1)}$  ko'rinishga keladi. Integrallash natijasida  $\ln p = \ln(x-1) + \ln C_1$  yoki  $p = C_1(x-1)$  yechim hosil bo'ladi. Dastlabki belgilashni e'tiborga olib,  $y'' = C_1(x-1)$  natijaga ega bo'lamiz. Bu esa tartibi pasayadigan tenglamadan iborat. Ketma-ket integrallab:

$$y' = \int C_1(x-1) dx + C_2 = \frac{1}{2} C_1 x^2 - C_1 x + C_2 ,$$

$$y = \int \left( \frac{1}{2} C_1 x^2 - C_1 x + C_2 \right) dx + C_3 = \frac{C_1}{6} x^3 - \frac{C_1}{2} x^2 + C_2 x + C_3$$

umumiy yechimni hosil qilamiz. Chetki shartlarni e'tiborga olib

$y''(2) = 1$  dan  $1 = C_1(2 - 1)$  yoki  $C_1 = 1$ ,

$y'(2) = 1$  dan  $1 = \frac{1}{2} \cdot 4 - 2 + C_2$  yoki  $C_2 = 1$ ,

$y(2) = 2$  dan  $2 = \frac{8}{6} - \frac{4}{2} + 2 + C_3$  yoki  $C_3 = \frac{2}{3}$

natijalarni hosil qilamiz. Bunda esa

$$y = \frac{1}{6}x^3 - \frac{1}{2}x^2 + x + \frac{2}{3}$$

xususiy yechimni topamiz.

**3- masala.**  $m$  massali jism samolyotdan boshlang'ich teziksiz tashlandi. Unga o'z tezligining kvadratiga teng miqdorda havo qarshilik ko'rsatmoqda. Jismning harakat qonunini toping.

Yechish. Quyidagi belgilashlarni kiritamiz:

$s$  — jism bosib o'tgan masofa;

$$v = \frac{ds}{dt} — jism tezligi; \quad w = \frac{d^2s}{dt^2} — tezlanish.$$

Jismga quyidagi kuchlar ta'sir etadi:

$p = mg$  — harakati yo'nalishidagi og'irlik kuchi;

$$F = mv^2 = k \left( \frac{ds}{dt} \right)^2 — qarama-qarshi yo'nalishdagi havo qarshiligi.$$

Nyutonning ikkinchi qonuniga asosan jismning harakat qonuni ni ifodalovchi quyidagi differentzial tenglamani yozamiz:

$$mw = p - k v^2 \text{ yoki } m \frac{d^2s}{dt^2} = mg - k \left( \frac{ds}{dt} \right)^2 \cdot \frac{ds}{dt} = v \text{ ekanini e'tibor-}$$

ga olsak,  $m \frac{dv}{dt} = mg - kv^2$  yoki  $\frac{dv}{dt} = \frac{k}{m} \left( \frac{gm}{k} - v^2 \right)$  tenglama hosil bo'ladi.

$a^2 = \frac{gm}{k}$  belgilash bajarsak, o'zgaruvchilari ajraladigan

$$\frac{dv}{dt} = \frac{k}{m} (a^2 - v^2) \text{ tenglamani hosil qilamiz.}$$

O'zgaruvchilarini ajratib,  $\frac{dv}{(a^2 - v^2)} = \frac{k}{m} dt$  integrallash yordamida

$$\frac{1}{2a} \ln \left| \frac{a+v}{a-v} \right| = \frac{k}{m} t + C_1$$

natijani hosil qilamiz.

Masala shartiga ko'ra,  $t=0$  da  $v(0)=0$  ekanligini e'tiborga olsak,  $C_1=0$  kelib chiqadi. Shunday qilib,  $\ln \left| \frac{a+v}{a-v} \right| = \frac{2ak}{m} t$  tenglikdan  $v$  ni

$$\text{topsak, } v = a \left( e^{\frac{2akt}{m}} - 1 \right) / \left( e^{\frac{2akt}{m}} + 1 \right) = a \frac{e^{\frac{akt}{m}} - e^{-\frac{akt}{m}}}{e^{\frac{akt}{m}} + e^{-\frac{akt}{m}}} = a \operatorname{th} \frac{akt}{m}$$

hosil

bo'ldi.

$$\frac{ak}{m} = \sqrt{\frac{mg}{k}} \cdot \frac{k}{m} = \sqrt{\frac{kg}{m}}$$

va

$$v = \frac{ds}{dt}$$

ekanini hisobga olib,

$$\frac{ds}{dt} = a \operatorname{th} \sqrt{\frac{kg}{m}} t$$

tenglamani hosil qilamiz va uning yechimi

$$s = \sqrt{\frac{m}{kg}} a \ln \operatorname{ch} \sqrt{\frac{kg}{m}} t + C_2 = \frac{m}{k} \ln \operatorname{ch} \sqrt{\frac{kg}{m}} t + C_2$$

,  $t=0$  da  $s(0)=0$  ekanli-

gidan  $C_2=0$  bo'lib, jismni bosib o'tgan yo'li  $s = \frac{m}{k} \ln \operatorname{ch} \sqrt{\frac{kg}{m}} t$  formu-

la bilan, tezligi esa  $v = a \operatorname{th} \sqrt{\frac{kg}{m}} t$  formula bilan ifodalanadi.

$$\text{Bu formuladagi } a = \sqrt{\frac{mg}{k}}, \lim_{t \rightarrow \infty} v = a \lim_{t \rightarrow \infty} \operatorname{th} \sqrt{\frac{kg}{m}} t = a = \sqrt{\frac{p}{k}}$$

ekan-

Ligida n tushish tezligi cheksiz orta olmaydi hamda tezda  $v = \sqrt{\frac{p}{k}}$  limit qiyamatga erishadi va xuddi shu holat parashyut bilan sakrashda ham sodir bo'ldi.

## Quyidagi tenglama larnı yeching:

$$132. \ x^3 y'' + x^2 y' = 1.$$

$$133. \ y'' + y' \operatorname{tg} x = \sin 2x.$$

$$134. \ y'' x \ln x = y'.$$

$$135. \ xy'' - y' = e^x - x^2.$$

$$136. \ y'' + 2xy'^2 = 0.$$

$$137. \ (1 - x^2) y'' - xy' = 2.$$

$$138. \ 2xy''' + y'' = y''^2 - a^2.$$

$$139. \ (1 + x^2) y'' + 1 + y'^2 = 0.$$

$$140. \ x^2 y'' = y'^2.$$

$$141. \ y''(e^x + 1) + y' = 0.$$

$$142. \ (1 + x^2) y'' + 2xy' = x^3.$$

$$143. \ y'' \operatorname{tg} x = y' + 1.$$

$$144. \ xy'' + y' + x = 0$$

$$145. \ y'' - \frac{1}{x-1} y' = x(x-1), \\ y(2) = 1, y'(2) = -1.$$

$$146. \ xy'' = y' + x \sin \frac{y'}{x}.$$

$$147. \ (1 - x^2) y'' + xy' = 2.$$

## 4-§. Argument oshkor holda qatnashmagan tenglama

$$F(y, y', y'', \dots, y^{(n)}) = 0 \quad (2.7)$$

tenglamada erkli o‘zgaruvchi x oshkor holda ishtirot etmaydi. Bu tenglama

$$y' = p(y) \quad (2.8)$$

almashtirish bilan tartibini bittaga pasaytirib yechiladi.

$$(2.8) \text{ almashtirishda: } y'' = p'(y) \cdot y' = p \cdot p',$$

$$y''' = p[p \cdot p'' + p'^2], \dots$$

o‘rniga qo‘yishlar bajariladi.

**1-misol.**  $1 + y'^2 = y \cdot y''$  tenglamaning umumiy yechimini toping.

Yechish.  $y' = p(y)$  va  $y'' = pp'$  almashtirishlarni bajarsak, dastlabki tenglama  $1 + p^2 = y \cdot p \cdot p'$  ko‘rinishga keladi, bu esa birinchi tartibli o‘zgaruvchilari ajraladigan tenglamadir.

O'zgaruvchilarni ajratib,  $\frac{pdP}{1+p^2} = \frac{dy}{y}$  tengla mani hosil qilamiz.

Tenglikni integrallab, quyidagiga ega bo'lamiz:

$$\frac{1}{2} \ln |1 + p^2| = \ln y + \ln C_1 \text{ yoki } 1 + p^2 = C_1^2 y^2, \quad p = \pm \sqrt{C_1^2 y^2 - 1}.$$

Dastlabki o'zgaruvchi  $y$  ga qaytib,  $y' = \pm \sqrt{C_1^2 y^2 - 1}$  yoki  
 $\frac{dy}{\sqrt{C_1^2 y^2 - 1}} = \pm dx$  natijaga ega bo'lamiz. Tenglikni integrallab,  
 $\frac{1}{C_1} \ln (C_1 y + \sqrt{C_1^2 y^2 - 1}) = \pm (x + C_2)$  yoki  $y = \frac{1}{2C_1} (e^{\pm(x+C_2)C_1} + e^{\mp(x+C_2)C_1}) =$   
 $= \frac{1}{C_1} \operatorname{ch} C_1 (x + C_2)$  izlangan umumiy yechimni hosil qilamiz.

**2- misol.**  $M(0; 1)$  nuqtadagi urinmasi  $OX$  o'q bilan  $\alpha=45^\circ$  bur-chak taslikil qiluvchi va egrilik radiusi normalning kubiga teng bo'lgan chiziq tenglamasini tuzing.

**Yechish.** Egri chiziqning egrilik radiusi va normali tenglamalari quyidagicha edi:

$$R = (1 + y'^2)^{3/2} / y'', \quad N = y \sqrt{1 + y'^2}.$$

**Masala** shartiga asosan  $R=N^3$  ekanligidan, quyidagi differensial tenglama ga ega bo'lamiz:

$$(1 + y'^2)^{3/2} / y'' = y^3 (\sqrt{1 + y'^2})^3.$$

Tenglikning har ikki tomonini  $(1 + y'^2)^{3/2}$  ga bo'lib,  $1/y'' = y^3$  yoki  $y'' y^{-3} = 1$  tenglamani hosil qilamiz.  $y' = p(y)$  va  $y'' = pp'$  almashitirish bajarsak,  $pp' y^3 = 1$  tenglik hosil bo'ladi. O'zgaruvchilarni ajratib va integrallab, quyidagi yechimni hosil qilamiz:

$$\frac{pdP}{dy} y^3 = 1, \quad pdP = y^{-3} dy, \quad \frac{1}{2} p^2 = -\frac{1}{2} y^{-2} + \frac{1}{2} C_1$$

yoki

$$p^2 = C_1 - y^{-2}.$$

Dastlabki o'zgaruvchiga qaytsak,  $y'' = C_1 - y^{-2}$  tenglama hosil bo'ladi. Masala shartiga asosan  $y'(x_0) = \operatorname{tg} 45^\circ = 1$  yoki  $y(0) = 1$ ,  $y'(0) = 1$ , bundan  $1 = C_1 - 1$ , ya'ni  $C_1 = 2$ . Shunday qilib, noma'lum funksiyani aniqlash uchun birinchi tartibli  $y'' = 2 - y^{-2}$  yoki  $y' = \frac{\sqrt{2y^2 - 1}}{y}$  tenglama kelib chiqadi. Bu tenglamaning o'zgaruvchilarini ajratib, integrallaymiz:

$$\frac{ydy}{\sqrt{2y^2 - 1}} = dx, \quad \frac{1}{2}\sqrt{2y^2 - 1} = x + \frac{1}{2}C_2$$

yoki  $y = \frac{1}{2}[(2x + C_2)^2 + 1]$ . Izlangan chiziqning  $M(0; 1)$  dan o'tishi shini e'tiborga olsak,  $1 = \frac{1}{2}[(2 \cdot 0 + C_2)^2 + 1]$ ,  $C_2 = 1$ .

Demak,  $y = 2x^2 + 2x + 1$  yechim hosil bo'ladi.

### Quyidagi tenglamalarni yeching:

**148.**  $y \cdot y'' + y'^2 = 0$ .

**153.**  $y''(1+y) = y'^2 + y'$ .

**149.**  $y'' + 2y(y')^3 = 0$ .

**154.**  $yy'' + y = y'^2$ .

**150.**  $y''\operatorname{tgy} = 2y'^2$ .

**155.**  $y'^2 + 2yy'' = 0$ .

**151.**  $y''(2y+3) - 2y'^2 = 0$ .

**156.**  $yy'' - y'^2 = 0$ ,

**152.**  $y(1 - \ln y)y'' + (1 + \ln y)y'^2 = 0$ .  $y(0) = 1$ ,  $y'(0) = 2$ .

**157.** Egrilik radiusining  $OY$  o'qdagi proyeksiyasini o'zgarmas a bo'lib,  $OX$  o'q bilan esa koordinata boshida kesishuvchi egri chiziq tenglamasini tuzing.

**158.** Suyuqlikka tashlangan  $m$  massali jism o'z og'irligi tufayli cho'ka boshladi. Agar suyuqlik qarshiligi jism tezligiga proporsional bo'lsa, harakat qonunini toping.

**159.**  $2yy'' = (y')^2$ .

**160.**  $y''y^3 = 1$ .

$$161. \quad 2yy'' = 1 + y'^2.$$

$$162. \quad y \cdot y'' = y'^2 + y^2 \ln y.$$

$$163. \quad y'' = y' / \sqrt{y}.$$

### 5- §. Noma'lum funksiya va hosilalarga nisbatan bir jinsli tenglamalar

$$F(x, y, y', y'', \dots, y^{(n)}) = 0 \quad (2.9)$$

tenglama  $x, y, y', y'', \dots, y^{(n)}$  larga nisbatan bir jinsli bo'lsa,

$$\frac{y'}{y} = p(x) \quad (2.10)$$

almashtirish yordamida (2.9) ni tartibini bittaga pasaytirib yechiladi.

**1- misol.**  $3y'^2 = 4y \cdot y'' + y^2$  tenglamani yeching.

Yechish. Berilgan tenglama  $y, y', y''$  larga nisbatan bir jinsli ekanligidan, tenglamaning har ikki tomonini  $y^2$  ga bo'lib,

$$3 \cdot \left(\frac{y'}{y}\right)^2 - 4 \cdot \frac{y''}{y} = 1 \quad \text{korinishga keltiramiz.} \quad \frac{y'}{y} = p(x), \quad \text{ya'ni}$$

$$p'(x) = \frac{y''y - y'^2}{y^2}, \quad \frac{y''}{y} - \left(\frac{y'}{y}\right)^2 = p' \quad \text{yoki} \quad \frac{y''}{y} = p' - p^2 \quad \text{almashtirish bajarib, o'zgaruvchilari ajraladigan} \quad 3p^2 - 4p^2 - 4p' = 1 \quad \text{yoki} \quad 4p' = -1 - p^2$$

birinchi tartibli tenglamaga ega bo'lamiz.

O'zgaruvchilarni ajratib va integrallab, quyidagi natijaga kelamiz:

$$\frac{dp}{1+p^2} = -\frac{1}{4} dx \quad \text{yoki} \quad \operatorname{arctg} p = C_1 - \frac{1}{4} x, \quad \text{bundan esa} \quad p = \operatorname{tg}\left(C - \frac{x}{4}\right)$$

yoki  $\frac{y'}{y} = \operatorname{tg}\left(C - \frac{x}{4}\right)$  hosil bo'lgan tenglamaning o'zgaruvchilarini ajratgandan so'ng, integrallab  $\ln|y| = 4 \ln \left| \cos \left( C_1 - \frac{x}{4} \right) \right| + \ln |C_2|$  yoki

$$y = C_2 \cos^4 \left( C_1 - \frac{x}{4} \right) \quad \text{yechimga ega bo'lamiz.}$$

**2- misol.**  $y'^2 + yy'' = yy'$  tenla mani yeching.

Yechish. Bu tenglama ham avvalgi tenglama kabi  $y, y', y''$  larga nisbatan bir jinsli bo'lgani uchun yuqoridagi usulni qo'llash mumkin. Lekin tenglamaning chap tomonidagi ifoda  $(yy)'$  ga tengligi, ya'ni  $(yy)' = y'^2 + yy''$  ekanligidan  $(yy)' = yy'$  tenglamaga ega bo'larniz.  $yy' = z$  almashtirish bajarsak, sodda  $z' = z$  tenglamaga ega bo'lamiz va uning umumiy yechimi  $z = C_1 e^x$  ko'rinishda bo'ladi. Belgilashga asosan  $yy' = C_1 e^x$  yoki  $ydy = C_1 e^x dx$  ni integrallab, quyidagi umumiy yechimni hosil qilamiz:

$$y^2 = 2C_1 e^x + C_2.$$

**Quyidagi tenglamalarni yeching:**

$$164. \quad yy'' - y'^2 = 0.$$

$$171. \quad xyy'' + xy'^2 = 2yy'.$$

$$165. \quad (y + y')y'' + y'^2 = 0.$$

$$172. \quad x^2 yy'' = (y - xy')^2.$$

$$166. \quad 2xy''' \cdot y'' = y'^2 - a^2.$$

$$173. \quad y'' + \frac{y'}{x} + \frac{y}{x^2} = \frac{y'^2}{y}.$$

$$167. \quad y'' = y'e^y, \quad y(0) = 0, \quad y'(0) = 1.$$

$$174. \quad x^2 yy'' + y'^2 = 0.$$

$$168. \quad xyy' - xy'^2 = yy'.$$

$$175. \quad x^2(y'^2 - 2yy'') = y^2.$$

$$169. \quad yy'' = y'^2 + 15y^2\sqrt{x}.$$

$$176. \quad xyy'' = y'(y + y').$$

$$170. \quad (1 + x^2)(y'^2 - yy'') = xyy'.$$

$$177. \quad 4x^2y^3y'' = x^2 - y^4.$$

$$178. \quad x^3y'' = (y - xy')(y - xy' - x).$$

## 6- §. Yuqori tartibli chiziqli tenglama

$$y^{(n)} + a_1(x)y^{(n-1)} + a_2(x)y^{(n-2)} + \dots + a_{n-1}(x)y' + a_n(x)y = f(x) \quad (2.11)$$

ko'rinishdagi tenglama *n-tartibli chiziqli bir jinsli bo'lmagan tenglama* deyiladi. Bu yerda  $a_1(x), a_2(x), \dots, a_n(x)$  va  $f(x)$  — ma'lum va biror oraliqda uzlusiz bo'lgan funksiyalar.

Agar  $f(x) = 0$  bo'lsa, bu tenglama chiziqli bir jinsli tenglama deyiladi.

Chiziqli bir jinsli tenglamaning birorta  $y_1$  xususiy yechimini bilgan holda

$$y = y_1 \cdot \int z(x) dx \quad (2.12)$$

chiziqli almashtirish yordamida berilgan tenglamaning tartibini bit-taga pasaytirish mumkin. U holda mos bir jinsli bo'limgan tenglama ham  $z(x)$  ga nisbatan  $(n-1)$ -tartibli chiziqli tenglamaga keladi.

**1- misol.**  $y''' + \frac{2}{x} y'' - y' + \frac{1}{x \ln x} y = x$  tenglamani  $y_1 = \ln x$  xususiy yechimini bilgan holda tartibini pasaytiring.

**Y e c h i s h .** (2.12) formulaga asosan  $y = \ln x \int z(x) dx$  almash-tirishni bajaramiz. Tegishli hosilalar

$$y' = \frac{1}{x} \int z dx + z \ln x, \quad y'' = -\frac{1}{x^2} \int z dx + \frac{2z}{x} + z' \ln x,$$

$$y''' = \frac{2}{x^3} \int z dx - \frac{3z}{x^2} + \frac{3z'}{x} + z'' \ln x$$

ni berilgan tenglamaga qo'yib,  $z(x)$  ga nisbatan quyidagi ikkinchi tartibli tenglamaga ega bo'lamiz:

$$z'' \ln x + \left( \frac{3}{x} + \frac{2 \ln x}{x} \right) \cdot z' + \left( \frac{1}{x^2} - \ln x \right) z = x.$$

**2- misol.**  $y''' + \frac{2}{x} y'' + y = 0$  tenglamaning xususiy yechimi  $y_1 = \frac{\sin x}{x}$  ekanligini bilgan holda uning umumiy yechimini toping.

**Y e c h i s h .** (2.12) formulaga ko'ra  $y = \frac{\sin x}{x} \int z(x) dx$  almashtiri-shni bajaramiz. Tegishli hosilalarni

$$y' = \frac{x \cos x - \sin x}{x^2} \int z dx + \frac{\sin x}{x} z,$$

$$y'' = \frac{\sin x}{x} z' + \frac{2(\cos x - \sin x)}{x^2} \cdot z - \frac{(x^2 - 2) \sin x + 2x \cos x}{x^3} \int z dx$$

tenglamaga qo‘ysak, quyidagi birinchi tartibli tenglama hosil bo‘ladi:

$$\sin x \cdot z' + 2 \cos x \cdot z = 0 \quad \text{yoki} \quad \frac{dz}{z} = -2 \frac{\cos x}{\sin x} dx.$$

Tenglikni integra llab,  $z = \frac{C_1}{\sin^2 x}$  yechimga ega bo‘lamiz.

Natijani dastlabki alma shirishga qo‘yib,

$$y = \frac{\sin x}{x} \int \frac{C_1}{\sin^2 x} dx = \frac{\sin x}{x} (C_2 - C_1 \operatorname{ctgx})$$

yoki

$$y = C_2 \frac{\sin x}{x} - C_1 \frac{\cos x}{x}$$

izlangan umumiy yechimni topamiz.

**Misollami yeching:**

**179.**  $y'' \sin^2 x = 2y$  tenglamaning  $y = \operatorname{ctgx}$  xususiy yechimini bilgan holda tartibini pasaytiring.

**180.**  $y'' - \frac{y'}{x} + \frac{y}{x^2} = 0$  tenglamaning  $y=x$  xususiy yechimini bilgan holda tartibini pasaytirib integrallang.

**181.**  $y'' + (\operatorname{tg} x - 2 \operatorname{ctgx}) y'' + 2 \operatorname{ctg}^2 x y = 0$  tenglamaning  $y=\sin x$  xususiy yechimini bilgan holda tartibini pasaytirib, uning umumiy yechimini toping.

## 7- §. Chiziqli bir jinsli tenglamalar

(2.11) tenglamada  $f(x)=0$  bo‘lsin, ya’ni

$$y^{(n)} + a_1(x)y^{(n-1)} + a_2(x)y^{(n-2)} + \dots + a_n(x)y = 0 \quad (2.13)$$

ko‘rinishdagi tenglama berilgan.  $y_1, y_2, \dots, y_n$  funksiyalar (2.13) tenglamaning chiziqli erkli xususiy yechimlari bo‘lsa, quyidagi teorema o‘rinli.

**Teorema.** Agar (2.13) tenglamaning xususiy chiziqli erkli yechimlari  $y_1, y_2, \dots, y_n$  funksiyalar bo'lsa,

$$y = C_1 y_1 + C_2 y_2 + \dots + C_n y_n \quad (2.14)$$

funksiya (2.13) tenglamaning umumiy yechimi bo'ladi ( $C_1, C_2, \dots, C_n$  — ixtiyoriy o'zgarmas sonlar).

**Izoh.**  $y_1, y_2, \dots, y_n$  funksiyalar ( $a; b$ ) oraliqda

$$\alpha_1 y_1 + \alpha_2 y_2 + \dots + \alpha_n y_n \neq 0 \quad (2.15)$$

shart noldan farqli  $\alpha_1, \alpha_2, \dots, \alpha_n$  sonlar uchun o'rini bo'lsa, bu funksiyalar chiziqli erkli funksiyalar, aks holda chiziqli bog'liq funksiyalar deyiladi.

Ikkita funksiya uchun  $\alpha_1 y_1 + \alpha_2 y_2 \neq 0$  (2.15) shart  $\frac{y_1}{y_2} \neq -\frac{\alpha_1}{\alpha_2} = C$

shartga mos keladi, ya'ni ikkita funksiya chiziqli erkli bo'lishi uchun ularning nisbati o'zgarmas son bo'lmasligi kerak.

**Masalan.** 1.  $y_1 = x, y_2 = x^2$  funksiyalar  $\frac{y_1}{y_2} = \frac{x}{x^2} = \frac{1}{x} \neq C$

bo'lgani uchun chiziqli erkli.

2.  $y_1 = e^x, y_2 = e^{-x}$  funksiyalar  $\frac{y_1}{y_2} = e^{2x} \neq C$  bo'lganidan chiziqli erkli.

3.  $y_1 = 2e^{3x}, y_2 = 5e^{3x}$  funksiyalar  $\frac{y_1}{y_2} = \frac{2}{5} = 0,4$  bo'lgani uchun chiziqli bog'liq. ( $a, b$ ) oraliqda berilgan  $(n-1)$ -tartibgacha uzluksiz hosilaga ega bo'lgan  $n$  ta funksiyadan chiziqli erkli bo'lishining yetarli sharti bo'lib,  $W(y_1, y_2, \dots, y_n)$  — Vronskiy determinantining noldan farqli bo'lishi xizmat qiladi, ya'ni

$$W(y_1, y_2, \dots, y_n) = \begin{vmatrix} y_1 & y_2 & \dots & y_n \\ y'_1 & y'_2 & \dots & y'_n \\ \dots & \dots & \dots & \dots \\ y_1^{(n-1)} & y_2^{(n-1)} & \dots & y_n^{(n-1)} \end{vmatrix} \neq 0. \quad (2.16)$$

Agar  $y_1, y_2, \dots, y_n$  funksiyalar (2.13) tenglamaning xususiy yechimlari bo'lsa, vronskianning noldan farqli bo'lishi zarur va yetarli.

(2.13) tenglamarning vronskiani (2.16)  $a_1(x)$  koeffitsiyent bilan ( $a, b$ ) oraliqning  $x_0$  nuqtasida

$$W(y_1, y_2, \dots, y_n) = W(y_1, y_2, \dots, y_n) \Big|_{x=x_0} \cdot e^{-\int_{x_0}^x a_1(x) dx} \quad (2.17)$$

*Liuvilli-Ostragradskiy formulasi* bilan ifodalanadi.

(2.13) tenglamanning chiziqli erkli yechimlari to'plami yechimlarning fundamental sistemasi deyiladi.

Ikkinci tartibli

$$y'' + a_1(x)y' + a_2(x)y = 0 \quad (2.18)$$

chiziqli bir jinsli tenglamanning fundamental sistemasi  $y_1(x)$  va  $y_2(x)$  funksiyalardan iborat bo'lsa, uning umumiy yechimi

$$y = C_1 y_1(x) + C_2 y_2(x) \quad (2.19)$$

ko'rinishda bo'ladi.

Agar (2.18) tenglamanning bitta xususiy yechimi  $y_1(x)$  ma'lum bo'lsa, ikkinchi chiziqli erkli yechim Liuvilli-Ostragradskiy formulasi, ya'ni

$$y_2(x) = y_1(x) \int \frac{e^{-\int a_1(x) dx}}{y_1^2(x)} dx \quad (2.20)$$

yordamida aniqlanaadi. Bu usul ikkinchi tartibli bir jinsli tenglamanning bitta yechimi ma'lum bo'lganda, uning tartibini pasaytirmsadan bordaniga (2.20) formula yordamida  $y_2(x)$  ni topib, (2.19) formula orqali umumiy yechimni yozishga imkon beradi.

**1-misol.**  $y'' + \frac{2}{x} y' + y = 0$  tenglamanning xususiy yechimi

$$y_1 = \frac{\sin x}{x} bo'lgan holda uning umumiy yechimini toping.$$

Yechish. (2.20) formula yordamida  $y_2(x)$  ni topamiz:

$$y_2(x) = \frac{\sin x}{x} \int \frac{e^{-\int \frac{2}{x} dx}}{\left(\frac{\sin x}{x}\right)^2} dx = \frac{\sin x}{x} \int \frac{dx}{\sin^2 x} = -\frac{\cos x}{x}.$$

Demak, (2.19) formulaga asosan tenglamaning umumiy yechimi quyidagi ko'rinishda bo'ladi:

$$y = C_1 \frac{\sin x}{x} - C_2 \frac{\cos x}{x}.$$

**2- misol.**  $y = C_1 e^{3x} + C_2 e^{-3x}$  funksiya  $y'' - 9y = 0$  tenglamaning umumiy yechimi ekanini ko'rsating.

Yechish.  $y_1 = e^{3x}$  va  $y_2 = e^{-3x}$  funksiyalarning har biri berilgan tenglamani qanoatlantiradi. Bu xususiy yechimlar o'zaro chiziqli erkli, chunki  $\frac{y_1}{y_2} = \frac{e^{3x}}{e^{-3x}} = e^{6x} \neq C$ . Shuning uchun bu ikki yechim fundamental sistemaning tashkil etadi, demak,

$$y = C_1 y_1 + C_2 y_2 = C_1 e^{3x} + C_2 e^{-3x}$$

umumiy yechim bo'ladi.

**3- misol.**  $y'' - y' = 0$  tenglamaning  $y_1 = e^x$ ,  $y_2 = e^{-x}$ ,  $y_3 = \operatorname{ch}x$  xususiy yechimlari fundamental sistema tashkil etadimi?

Yechish. Buning uchun vronskianni hisoblaymiz:

$$W(x) = \begin{vmatrix} y_1 & y_2 & y_3 \\ y_1' & y_2' & y_3' \\ y_1'' & y_2'' & y_3'' \end{vmatrix} = \begin{vmatrix} e^x & e^{-x} & \operatorname{ch}x \\ e^x & -e^{-x} & \operatorname{sh}x \\ e^x & e^{-x} & \operatorname{ch}x \end{vmatrix} = 0,$$

chunki birinchi va uchinchi satr elementlari bir xil. Shunday qilib, bu funksiyalar chiziqli bog'liq, ya'ni ular fundamental sistemani tashkil etmaydi. Demak, ulardan umumiy yechim tuzib bo'lmaydi.

### Misollarни yeching:

**182.**  $y_1 = \operatorname{sh}x$  va  $y_2 = \operatorname{ch}x$  funksiyalar  $y''' - y = 0$  tenglamaning xususiy yechimlari bo'lsa, ular fundamental sistema tashkil etadimi?

**183.**  $y'' + \frac{1}{x} y' + \left(1 - \frac{1}{4x^2}\right)y = 0$ ,  $x \neq 0$  tenglamaning  $y_1 = \frac{1}{\sqrt{x}} \sin x$ ,

$y_2 = \frac{1}{\sqrt{x}} \cos x$  xususiy yechimlaridan umumiy yechim tuzib bo'ladi mi?

**Quyida berilgan funksiyalar o'zining aniqlanish sohasida chiziqli erklı bo'lishi yoki bo'lm asligini aniqlang:**

184.  $x+1, \quad 2x+1, \quad x+2.$

185.  $2x^2+1, \quad x^2-1, \quad x+2.$

186.  $\sqrt{x}, \quad \sqrt{x+a}, \quad \sqrt{x+2a}.$

187.  $\ln(2x), \quad \ln(3x), \quad \ln(4x).$

188.  $y_1 = e^{-2x}$  va  $y_2 = e^x$  funksiyalari  $y'' + y' - 2y = 0$  tenglamaring xususiy yechimlari bo'lsa, umumiy yechim tuzilsin.

189.  $y_1 = 1$  va  $y_2 = e^{2x}$  funksiyalari  $y'' - 2y' = 0$  tenglamaga xususiy yechim bo'lishini va fundamental sistema tashkil etishini ko'r-sating.

190.  $y'' - 4y' + 5y = 0$  tenglama uchun  $y_1 = e^{2x} \cos x$ ,  $y_2 = e^{2x} \sin x$  funksiyalar xususiy yechim bo'lsa, ularni fundamental sistema tashkil etishini ko'rsating va umumiy yechimni yozing.

191.  $y'' - y = 0$  tenglamaga  $y_1 = e^{-x}$  xususiy yechim bo'lsa,  $y_2$  ikkinchi xususiy yechimni toping va umumiy yechimni yozing.

## 8- §. O'zgarmas koeffitsiyentli chiziqli bir jinsli tenglama

$$y^{(n)} + a_1 y^{(n-1)} + a_2 y^{(n-2)} + \dots + a_{n-1} y' + a_n y = 0 \quad (2.21)$$

tenglama o'zgarmas koeffitsiyentli chiziqli bir jinsli tenglama deyiladi, bu yerda  $a_1, a_2, \dots, a_n$  — o'zgarmas haqiqiy sonlar.

(2.21) tenglamaning yechimini

$$y = e^{kx} \quad (2.22)$$

ko'rinishda qidirib, uni tenglamaga qo'yish orqali, (2.21) ning xarakteristik tenglamasi deb ataluvchi

$$k^n + a_1 k^{n-1} + a_2 k^{n-2} + \dots + a_{n-1} k + a_n = 0 \quad (2.23)$$

algebraik tenglamani hosil qilamiz.

(2.21) tenglamaning yechimi (2.23) xarakteristik tenglamaning yechimiga mos ravishda:

1) har bir oddiy haqiqiy  $k$  yechimga  $Ce^{kx}$  qo'shiluvchi mos keladi, bu holda umumiy yechim quyidagi cha bo'ldi:

$$y = C_1 e^{k_1 x} + C_2 e^{k_2 x} + \dots + C_n e^{k_n x}; \quad (2.24)$$

2) har bir karrali yechimga

$$y = (C_1 + C_2 x + \dots + C_m x^{m-1}) e^{kx} \quad (2.25)$$

ko'rinishdagi yechim mos keladi;

3) har bir  $k_{1,2} = \alpha \pm i\beta$  oddiy kompleks yechimga esa

$$e^{\alpha x} (C_1 \cos \beta x + C_2 \sin \beta x) \quad (2.26)$$

qo'shiluvchi mos keladi;

4) har bir  $k_{1,2} = \alpha \pm i\beta$   $m$ -karrali yechimga

$$e^{\alpha x} [(C_1 + C_2 x + \dots + C_{m-1} x^{m-1}) \cos \beta x + (C_1 + C_2 x + \dots + C_{m-1} x^{m-1}) \cdot \sin \beta x]$$

qo'shiluvchi mos keladi.

**1- misol.**  $y'' - 7y' + 6y = 0$  tenglamaning umumiy yechimi topilsin.

**Yechish.**  $k^2 - 7k + 6 = 0$  xarakteristik tenglamani tuzib,  $k_1=1$  va  $k_2=6$  ildizlarga ega bo'lamiz, bularga esa  $e^x$  va  $e^{6x}$  xususiy yechimlar mos keladi. Bu yechimlar chiziqli erkli bo'lganidan, umumiy yechim (2.29) formulaga asosan quyidagi ko'rinishda yoziladi:

$$y = C_1 e^x + C_2 e^{6x}.$$

**2- misol.**  $y'''' - 13y'' + 36y = 0$  tenglamaning umumiy yechimi topilsin.

**Yechish.** Xarakteristik tenglarna  $k^4 - 13k^2 + 36 = 0$  ko'rinishda bo'lib, uning ildizlari  $k_{1,2} = \pm 3$ ,  $k_{3,4} = \pm 2$ . Bunga mos  $e^{-3x}$ ,  $e^{3x}$ ,  $e^{-2x}$ ,  $e^{2x}$  funksiyalar chiziqli erkli bo'lganligidan, umumiy yechim (2.24) formulaga asosan

$$y = C_1 e^{-3x} + C_2 e^{3x} + C_3 e^{-2x} + C_4 e^{2x}.$$

3- misol.  $y'' - y' - 2y = 0$  tenglamaniнg  $y(0)=0$  va  $y'(0) = 3$  boshlang'ich shartlarni qanoatlantiruvchi xususiy yechimi topilsin.

Yechish . Mos xarakteristik tenglama  $k^2 - k - 2 = 0$  ko'rinishda bo'ladi va uning yechimlari  $k_1 = -1$ ,  $k_2 = 2$ . Umumiy yechim esa (2.24) formuladan

$$y = C_1 e^{-x} + C_2 e^{2x}$$

ko'rinishda bo'ladi.

Boshlang'ich shartlardan  $C_1$  va  $C_2$  larga nisbatan

$$\begin{cases} C_1 + C_2 = 0, \\ -C_1 + 2C_2 = 3 \end{cases}$$

sistema hosil bo'ladi va  $C_1 = -1$ ,  $C_2 = 1$  ekanligini topamiz. Demak, xususiy yechim  $y = -e^{-x} + e^{2x}$ .

4- misol.  $y'' - 2y' = 0$  tenglamaniнg  $y(0)=0$  va  $y(\ln 2)=3$  chegaraviy shartlarni qanoatlantiruvchi yechimi topilsin.

Yechish . Xarakteristik tenglama  $k^2 - 2k = 0$  ko'rinishda bo'ladi va  $k_1=0$ ,  $k_2=2$  uning yechimlari bo'ladi. Demak, umumiy yechim (2.24) formuladan  $y(x) = C_1 + C_2 e^{2x}$  ko'rinishda bo'ladi.

Chegaraviy shartlarga ko'ra quyidagi sistemaga ega bo'lamiz:

$$\begin{cases} C_1 + C_2 = 0, \\ C_1 + C_2 e^{2\ln 2} = 3 \end{cases} \text{ yoki } \begin{cases} C_1 + C_2 = 0, \\ C_1 + 4C_2 = 3. \end{cases}$$

Bundan esa  $C_1=-1$ ,  $C_2=1$ . Izlangan xususiy yechim  $y(x) = e^{2x} - 1$  ko'rinishda bo'ladi.

5- misol.  $y''' - 2y'' + y' = 0$  tenglamaniнg umumiy yechimi topilsin.

Yechish . Xarakteristik tenglarna  $k^3 - 2k^2 + k = 0$  ko'rinishda bo'lib,  $k_1=0$ ,  $k_2=k_3=1$ . Bu yerda 1 ikki karrali yechim bo'lgani uchun  $e^{ox}$ ,  $e^{x^2}$ ,  $x \cdot e^x$  funksiyalar xususiy yechimlar bo'lib xizmat qiladi va umumiy yechim (2.25) formuladan  $y = C_1 + C_2 e^x + C_3 x e^x$  ko'rinishda bo'ladi.

**6-misol.**  $y'' - 4y' + 13y = 0$  tenglamaning umumiy yechimi topilsin.

Yechish. Xarakteristik tenglama  $k^2 - 4k + 13 = 0$  ko'rinishda bo'lib,  $k_{1,2} = 2 \pm 3i$ . Bularga mos xususiy yechimlar  $e^{2x} \cos 3x$  va  $e^{2x} \sin 3x$  ko'rinishda bo'lgani uchun urnumiyl yechim, (2.26) formulaga asosan,  $y = e^{2x}(C_1 \cos 3x + C_2 \sin 3x)$ .

**Quyidagi tenglamalarning umumiy yechimlari topilsin:**

192.  $y'' - 4y' + 3y = 0.$

202.  $y'''' - 2y''' + y'' = 0.$

193.  $y'' - 4y' + 4y = 0.$

203.  $y'''' + a^4 y = 0.$

194.  $y'' - 4y' + 13y = 0.$

204.  $y'''' + 5y'' + 4y = 0.$

195.  $y'' - 4y = 0.$

205.  $y'' - 3y' + 2y = 0.$

196.  $y'' + 4y = 0.$

206.  $y'' + 2ay' + a^2 = 0.$

197.  $y'' + 4y' = 0.$

207.  $y'' + 2y' + 5y = 0.$

198.  $y'' - y' - 2y = 0.$

208.  $x''(t) - 2x'(t) - 3x(t) = 0.$

199.  $y'' + 25y = 0.$

209.  $x''(t) + w^2 x(t) = 0 (w = \text{const}).$

200.  $y'' - y' = 0.$

210.  $s''(t) + as'(t) = 0 (a = \text{const}).$

201.  $y'' + 4y' + 4y = 0.$

**Quyidagi tenglamalarning boshlang'ich yoki chetki shartlarni qanoatlantiruvchi yechimi topilsin:**

211.  $y'' + 5y' + 6y = 0, \quad y(0) = 1, \quad y'(0) = -6.$

212.  $y'' - 10y' + 25y = 0, \quad y(0) = 0, \quad y'(0) = 1.$

213.  $y'' - 2y' + 10y = 0, \quad y\left(\frac{\pi}{6}\right) = 0, \quad y'\left(\frac{\pi}{6}\right) = e^{\frac{\pi}{6}}.$

214.  $y'' + 3y' = 0, \quad y(0) = 1, \quad y'(0) = 2.$

215.  $y'' + 9y = 0, \quad y(0) = 0, \quad y\left(\frac{\pi}{4}\right) = 1.$

$$216. \quad y'' + y = 0, \quad y(0) = 1, \quad y'\left(\frac{\pi}{3}\right) = 0.$$

$$217. \quad 9y'' + y = 0, \quad y\left(\frac{3\pi}{2}\right) = 2, \quad y'\left(\frac{3\pi}{2}\right) = 0.$$

$$218. \quad y'' - y = 0, \quad y(0) = 2, \quad y'(0) = 4.$$

$$219. \quad y'' + 2y' + 2y = 0, \quad y(0) = 1, \quad y'(0) = 1.$$

## 9- §. Chiziqli bir jinsli bo'lmagan tenglama

$$y^{(n)} + a_1(x)y^{(n-1)} + \dots + a_{n-1}(x)y' + a_n(x)y = f(x) \quad (2.28)$$

tenglama *chiziqli bir-jinsli bo'lmagan*, ya'ni o'ng tomoni 0 dan farqli tenglama deyiladi. (2.28) tenglamaning umumi yechimi quyidagi teorema bilan aniqlanadi.

**Teorema.** Agar  $U = U(x)$  funksiya (2.28) tenglamaning birorta xususiy yechimi bo'lib,  $y_1, y_2, \dots, y_n$  funksiyalar esa mos bir jinsli tenglamaning fundamental yechimlari sistemasini tashkil etsa, bir jinsli bo'lmagan tenglamaning umumi yechimi.

$$y = U + C_1 y_1 + C_2 y_2 + \dots + C_n y_n \quad (2.29)$$

ko'rinishda bo'ladi.

Boshqacha aytganda, bir jinsli bo'lmagan tenglamaning umumi yechimi uning biror xususiy yechimi bilan unga mos bir jinsli tenglamaning umumi yechimlari yig'indisiga teng.

Masalaning muhim jihat shundaki, bir jinsli tenglamaning umumi yechimini xarakteristik tenglama orqali topishni bilamiz, ammo bir jinsli bo'lmagan tenglamaning birorta xususiy yechimini topish masalasi ancha murakkab.

Chiziqli bir jinsli bo'lmagan tenglamaning birorta xususiy yechimini topishning ikki usuli bilan tanishib o'tamiz. (Mos bir jinsli tenglamaning umumi yechimi ma'lum deb olamiz)

### I. O'zgarmasni variatsiyalash usuli

Bu usul bir jinsli bo'lmagan tenglamaning birorta xususiy yechimi topish uchun qo'llaniladi va koeffitsiyentlar o'zgarmas bo'lgani hol uchun ham yaroqlidir.

Mos bir jinsli tenglamaning fundamental yechimlari  $y_1, y_2, \dots, y_n$  ma'lum bo'ssa, (2.28) ning birorta xususiy yechimini

$$U(x) = C_1(x)y_1 + C_2(x)y_2 + \dots + C_n(x)y_n \quad (2.30)$$

ko'rinishda qid iramiz.

(2.30) ni (2.28) ga qo'yib,  $C_1(x), C_2(x), \dots, C_n(x)$  funksiyalarni aniqlash uchun quyidagi sistemani hosil qilamiz:

$$\begin{cases} C'_1(x)y_1 + C'_2(x)y_2 + \dots + C'_n(x)y_n = 0, \\ C'_1(x)y'_1 + C'_2(x)y'_2 + \dots + C'_n(x)y'_n = 0, \\ \dots \\ C'_1(x)y_1^{(n-2)} + C'_2(x)y_2^{(n-2)} + \dots + C'_n(x)y_n^{(n-2)} = 0, \\ C'_1(x)y_1^{(n-1)} + C'_2(x)y_2^{(n-1)} + \dots + C'_n(x)y_n^{(n-1)} = f(x). \end{cases} \quad (2.31)$$

Bu siste madan  $C_1(x), C_2(x), \dots, C_n(x)$  lami aniqlab (2.30) ga qo'ysak, qidirilgan xususiy yechimga ega bo'lamiz.

Yuqoridagi sistema

$$y'' + a_1(x)y' + a_2(x)y = f(x)$$

ikkinchi tartibli tenglama uchun

$$\begin{cases} C'_1(x)y_1 + C'_2(x)y_2 = 0, \\ C'_1(x)y'_1 + C'_2(x)y'_2 = f(x) \end{cases} \quad (2.32)$$

ko'rinishni oladi va bu siste maning yechimi quyidagi ko'rinishda bo'ladi:

$$C_1(x) = - \int_{W(y_1, y_2)}^{} y_2 f(x) dx; \quad C_2(x) = \int_{W(y_1, y_2)}^{} y_1 f(x) dx.$$

U holda (2.30) formulaga asosan xususiy yechim

$$U(x) = -y_1 \int_{W(y_1, y_2)}^{} y_2 f(x) dx + y_2 \int_{W(y_1, y_2)}^{} y_1 f(x) dx \quad (2.33)$$

ko'rinishda bo'lib, bu yerda  $W(y_1, y_2) = y_1 - y_2$  va  $y_1$  yechimlar vrons-kianidir.

**1- misol.**  $y'' + \frac{2}{x}y' + y = \frac{\operatorname{ctgx}}{x}$  tenglamaning umumiy yechimini toping.

Yechish.  $y'' + \frac{2}{x}y' + y = 0$  bir jinsli tenglama uchun 7- § dagi

1- misolda  $y_1 = \frac{\sin x}{x}$  ekanini bilgan holda  $y_2 = -\frac{1}{x} \cos x$  ni aniqla-

$$\text{gan edik va } W(y_1, y_2) = \begin{vmatrix} \frac{\sin x}{x} & -\frac{\cos x}{x} \\ x \cos x - \sin x & x \sin x + \cos x \end{vmatrix} = \frac{1}{x^2}.$$

Demak,  $y_1$  va  $y_2$  yechimlar chiziqli erkli, ya'ni fundamental sistemani tashkil etadi. U holda bir jinsli tenglamaning umumiy yechimi  $y = C_1 \frac{\sin x}{x} - C_2 \frac{\cos x}{x}$  ko'rinishda bo'ladi. Bunda esa xususiy yechimni (2.33) formulaga asosan aniqlash mumkin:

$$U(x) = -\frac{\sin x}{x} \int \frac{\cos x \operatorname{ctgx}}{\frac{1}{x^2}} dx - \frac{\cos x}{x} \int \frac{\sin x \operatorname{ctgx}}{\frac{1}{x^2}} dx = \frac{\sin x}{x} \int \frac{\cos^2 x}{\sin x} dx - \frac{\cos x}{x} \int \cos x dx = \frac{\sin x}{x} \left[ \ln \left| \operatorname{tg} \frac{x}{2} \right| + \cos x \right] - \frac{\cos x}{x} \sin x = \frac{\sin x}{x} \ln \left| \operatorname{tg} \frac{x}{2} \right|.$$

Natijada (2.29) formulaga asosan

$$y = C_1 \frac{\sin x}{x} - C_2 \frac{\cos x}{x} + \frac{\sin x}{x} \ln \left| \operatorname{tg} \frac{x}{2} \right|$$

umumiy yechimni hosil qilamiz.

Yuqoridagi misoldan ko'rindaniki, (2.28) tenglamaning bir jinsli tenglamasining  $y_1(x)$  birorta xususiy yechimi ma'lum bo'lsa, uning umumiy yechimi

$$y = C_1 y_1 + C_2 y_2 + U(x)$$

ko'rinishda aniqlanib, bu yerda

$$y_2 = y_1 \int \frac{e^{-\int a_1(x) dx}}{y_1^2} dx$$

formul a orqali,  $U(x)$  esa (2.30) formuladan topilar ekan.

## II. Noma'lum koeffitsiyentlar usuli

Bu usuldan faqat (2.28) tenglamada koeffitsiyentlar o'zgarmas bo'lgan hol dagina foydalanish mumkin.

$$y^{(n)} + a_1 y^{(n-1)} + a_2 y^{(n-2)} + \dots + a_n y = f(x) \quad (2.34)$$

tenglarna berilgan bo'lib,

$$f(x) = e^{\alpha x} [P_n(x) \cos \beta x + Q_m(x) \sin \beta x] \quad (2.35)$$

ko'rinishda bo'lsa (bu yerda  $P_n(x)$  va  $Q_m(x)$  – mos ravishda  $n$  va  $m$  darajali ko'phadlar), u holda birorta xususiy yechim

$$U(x) = x^r e^{\alpha x} [P_l(x) \cos \beta x + Q_l(x) \sin \beta x]$$

ko'rinishda qidiriladi, bu yerda  $r$  daraja –  $k^n + a_1 k^{n-1} + \dots + a_n = 0$  xarakteristik tenglamaning  $\alpha + \beta i$  ildizi tartibiga teng bo'lgan sondir. Agar xarakteristik tenglama  $\alpha + \beta i$  kompleks ildizga ega bo'lmasa,  $r=0$  olinadi.  $P_l(x)$  va  $Q_l(x)$  lar esa  $l$  tartibli ko'phadlar bo'lib,  $l = \max(n, m)$  va  $P_l(x) = A_0 x^l + A_1 x^{l-1} + \dots + A_l$ ,  $Q_l(x) = B_0 x^l + B_1 x^{l-1} + \dots + B_l$ .

$$y'' + a_1 y' + a_2 y = f(x) \quad (2.36)$$

tenglarna uchun yuqorida aytilganlarni tartiblab, quyidagicha yozish mumkin.

1.  $f(x) = P_n(x) e^{\alpha x}$  bo'lgan holda:

a)  $\alpha$  son  $k^2 + a_1 k + a_2 = 0$  xarakteristik tenglamaning ildizi bo'lmasa, xususiy yechim

$$U(x) = Q_n(x) e^{\alpha x} \quad (2.37)$$

ko'rinishda qidiriladi;

b) α son xarakteristik tenglamaning bir karrali ildizi bo'lsa, xususiy yechim

$$U(x) = x Q_n(x) e^{\alpha x} \quad (2.38)$$

ko'rinishda qidiriladi;

d) α son xarakteristik tenglamaning ikki karrali ildizi bo'lsa, xususiy yechim

$$U(x) = x^2 Q_n(x) e^{\alpha x} \quad (2.39)$$

ko'rinishda qidiriladi.

2.  $f(x) = e^{\alpha x} [P_n(x) \cos \beta x + Q_m(x) \sin \beta x]$  bo'lgan holda:

a)  $\alpha + \beta i$  xarakteristik tenglamaning ildizi bo'lmasa, u holda xususiy yechim

$$U(x) = e^{\alpha x} [P_l(x) \cos \beta x + Q_l(x) \sin \beta x] \quad (2.40)$$

ko'rinishda qidiriladi, bu yerda  $l = \max(n, m)$ ;

b)  $\alpha + \beta i$  son xarakteristik tenglamaning ildizi bo'lsa, xususiy yechim

$$U(x) = x \cdot e^{\alpha x} [P_l(x) \cos \beta x + Q_l(x) \sin \beta x] \quad (2.41)$$

ko'rinishda qidiriladi, bu yerda  $l = \max(n, m)$ .

2-misol.  $y'' - 2y' - 3y = e^{4x}$  tenglamaning  $y(\ln 2) = 1$ ,  $y(2\ln 2) = 1$  chegaraviy shartlarni qa noatlantiruvchi xususiy yechimi topilsin.

**Yechish.** Xarakteristik tenglamaning  $k^2 - 2k - 3 = 0$  yechimlari  $k_1 = -1$ ,  $k_2 = 3$ . Demak, bir jinsli tenglamaning umumiy yechimi

$$y = C_1 e^{-x} + C_2 e^{3x}$$

ko'rinishda bo'ladi.  $\alpha = 4$ ,  $P_0(x) = 1$  bo'lgani uchun xususiy yechimni (2.37) formulaga asosan

$$U(x) = Ae^{4x}$$

ko'rinishda izlaymiz. Bu yechimni tenglamaga qo'ysak:

$$16Ae^{4x} - 8Ae^{4x} - 3Ae^{4x} = e^{4x} \text{ yoki } 5A = 1, A = \frac{1}{5}.$$

Dernak, umurniy yechim (2.29) formulaga asosan

$$y = C_1 e^{-x} + C_2 e^{3x} + \frac{1}{5} e^{4x}$$

ko'rinishda bo'ladi.  $C_1$  va  $C_2$  larni aniqlash uchun chegaraviy shartlardan foydalanamiz:

$$\begin{cases} C_1 e^{-\ln 2} + C_2 e^{3\ln 2} + \frac{1}{5} e^{4\ln 2} = 1, \\ C_1 e^{-2\ln 2} + C_2 e^{6\ln 2} + \frac{1}{5} e^{8\ln 2} = 1. \end{cases}$$

$$\begin{cases} \frac{1}{2}C_1 + 8C_2 + \frac{16}{5} = 1, \\ \frac{1}{4}C_1 + 64C_2 + \frac{256}{5} = 1 \end{cases} \text{ yoki } C_1 = \frac{652}{75}, C_2 = -\frac{491}{600}.$$

Dernak, izlanayotgan xususiy yechim:

$$y = \frac{652}{75} e^{-x} - \frac{491}{600} e^{3x} + \frac{1}{5} e^{4x}.$$

**3- misol.**  $y'' + y' - 2y = \cos x - 3\sin x$  tenglamaning  $y(0)=1$ ,  $y'(0)=2$  boshlang'ich shartlarni qanoatlantiruvchi yechimi topilsin.

**Yechish.** Xarakteristik tenglama  $k^2 + k - 2 = 0$ , uning yechimlari esa  $k_1 = -2$ ,  $k_2 = 1$  bo'lgani uchun bir jinsli tenglamaning umumiy yechimi

$$y = C_1 e^{-2x} + C_2 e^x$$

ko'rinishda bo'ladi.  $f(x) = e^{0x}(\cos x - 3\sin x)$ , ya'ni  $\alpha=0$ ,  $\beta=1$  bo'lgani uchun xususiy yechimi ni (2.40) formulaga asosan

$$U(x) = A\cos x + B\sin x$$

ko'rinishda izlaymiz.  $U(x)$  ni tenglamaga qo'ysak:

$$-A\cos x - B\sin x - A\sin x + B\cos x - 2A\cos x - 2B\sin x = \cos x - 3\sin x$$

yoki

$$(B - 3A)\cos x - (3B + A)\sin x = \cos x - 3\sin x.$$

Mos koeffitsiyentlarni tenglab, quyidagi siste maga ega bo'lamiz:

$$\begin{cases} B - 3A = 1, \\ 3B + A = 3 \end{cases} \quad \text{yoki} \quad A = 0, \quad B = 1.$$

Bundan esa umumiy yechim  $y = C_1 e^{-2x} + C_2 e^x + \sin x$  ko'rinishda ekanligini topamiz.  $C_1$  va  $C_2$  koeffitsiyentlarni topish uchun boshlang'ich shartlaridan foydalanib, quyidagi sistemani hosil qilamiz:

$$\begin{cases} C_1 e^0 + C_2 e^0 + \sin 0 = 1, \\ -2C_1 e^0 + C_2 e^0 + \cos 0 = 2 \end{cases} \quad \text{yoki} \quad C_1 = 0, \quad C_2 = 1. \quad \text{Demak, } y = e^x + \sin x \text{ izlangan yechim bo'ladi.}$$

**4- misol.**  $y'' - y' = \operatorname{ch} 2x$  tenglamaning  $y(0) = y'(0) = 0$  boshlang'ich shartlarni qanoatlantiruvchi yechimi topilsin.

**Yechish.** Xarakteristik tenglama  $k^2 - k = 0$  va uning yechimlari  $k_1 = 0$ ,  $k_2 = 1$  bo'lgani uchun bir jinsli tenglamaning umumiy yechimi

$$y = C_1 + C_2 e^x$$

ko'rinishda bo'ladidi.  $f(x) = e^{0x} (\operatorname{ch} 2x + 0 \cdot \operatorname{sh} 2x)$  bo'lgani uchun (2.40) formulaga asosan xususiy yechimni

$$U(x) = A\operatorname{ch} 2x + B\operatorname{sh} 2x$$

ko'rinishda izlanadi.  $U(x)$  ni tenglamaga qo'syk:

$$4A\operatorname{ch} 2x + 4B\operatorname{sh} 2x - 2A\operatorname{sh} 2x - 2B\operatorname{ch} 2x = \operatorname{ch} 2x$$

yoki

$$(4A - 2B)\operatorname{ch} 2x + (4B - 2A)\operatorname{sh} 2x = \operatorname{ch} 2x + 0 \cdot \operatorname{sh} 2x.$$

Shunday qilib, mos koeffitsiyentlarni tenglab, quyidagi sistemaga ega bo'lamiz:

$$\begin{cases} 4A - 2B = 1, \\ -2A + 4B = 0. \end{cases} \quad \text{Buning yechimi } A = \frac{1}{3}, \quad B = \frac{1}{6}.$$

Demak, umumiyyechim quyidagi ko'rinishda bo'ladi:

$$y = C_1 + C_2 e^x + \frac{1}{3}\operatorname{ch} 2x + \frac{1}{6}\operatorname{sh} 2x.$$

Noma'lum koeffitsiyentlarni aniqlash uchun boshlang'ich shartlardan foydalana miz:

$$\begin{cases} C_1 + C_2 e^0 + \frac{1}{3} \operatorname{ch} 0 + \frac{1}{6} \operatorname{sh} 0 = 0, \\ C_2 e^0 + \frac{2}{3} \operatorname{sh} 0 + \frac{1}{3} \operatorname{ch} 0 = 0 \end{cases}$$

yoki

$$\begin{cases} C_1 + C_2 = -\frac{1}{3}, \\ C_2 + \frac{1}{3} = 0. \end{cases}$$

Bundan,  $C_1 = 0$ ,  $C_2 = -\frac{1}{3}$ . Demak, boshlang'ich shartlarni bajaruvchi xususiy yechim  $y = -\frac{1}{3}e^x + \frac{1}{3}\operatorname{ch} 2x + \frac{1}{6}\operatorname{sh} 2x$  ko'rinishda bo'ladidi.

**Izoh:**  $f(x) = \operatorname{ch} 2x = \frac{e^{2x} + e^{-2x}}{2} = \frac{1}{2}(e^{2x} + e^{-2x})$  ekanligidan xususiy yechimni  $U = U_1 + U_2 = A_1 e^{2x} + B_1 e^{-2x}$  ko'rinishda qidirsak ham aynan yuqorida yechim hosil bo'ldi.

**5-misol.**  $y'' - 2y' + 2y = x^2$  tenglamaning umumiy yechimi topilsin.

**Yechish.** Xarakteristik tenglama  $k^2 - 2k + 2 = 0$  va uning ildizlari  $k_{1,2} = 1 \pm i$  bo'lgani uchun bir jinsli tenglamaning umumiy yechimi

$$y = e^x (C_1 \cos x + C_2 \sin x)$$

ko'rinishda bo'ladidi.

$f(x) = x^2 = e^{0x} P_2(x)$  bo'lgani uchun xususiy yechimni  $U(x) = Ax^2 + Bx + C$  ko'rinishda qidiramiz. Tenglamaga qo'yish natijasi da

$$2A - 4Ax - 2B + 2Ax^2 + 2Bx + 2C = x^2 \text{ yoki}$$

$$2Ax^2 + (-4A + 2B)x + 2A - 2B + 2C = x^2 + 0x + 0$$

ekanligidan quyidagi larini hosil qilamiz:

$$\begin{cases} 2A = 1, \\ -4A + 2B = 0, \quad \text{yoki} \quad A = \frac{1}{2}, \quad B = 1, \quad C = \frac{1}{2}. \\ 2A - 2B + 2C = 0 \end{cases}$$

Bundan esa dastlabki tenglamanining umumiy yechimini

$$y = e^x (C_1 \cos x + C_2 \sin x) + \frac{1}{2}(x+1)^2.$$

**6-misol.**  $y'' + y = xe^x + 2e^{-x}$  tenglamanining umumiy yechimini toping.

Yechish. Xarakteristik tenglama  $k^2 + 1 = 0$ , uning ildizlari esa  $k_{1,2} = \pm i$  bo'ladi. Shuning uchun bir jinsli tenglamanining umumiy yechimi

$$y = C_1 \cos x + C_2 \sin x$$

ko'rinishda bo'ladi.  $f(x) = f_1(x) + f_2(x) = xe^x + 2e^{-x}$  bo'lgani uchun  $\alpha_1 = 1$ ,  $\alpha_2 = -1$ ,  $\beta_1 = \beta_2 = 0$ ,  $p_1(x) = x$ , demak, xususiy yechimni  $U(x) = U_1(x) + U_2(x) = (Ax + B)e^x + Ce^{-x}$  ko'rinishda izlaysiz. Tegishli hosilalarini hisoblab tenglamaga qo'ysak:

$$\begin{aligned} 2Ae^x + (Ax + B)e^x + Ce^{-x} + (Ax + B)e^{-x} &= xe^x + 2e^{-x}, \\ (2Ax + 2A + 2B)e^x + 2Ce^{-x} &= (1x + 0)e^x + 2e^{-x}. \end{aligned}$$

Nomalum koeffitsiyentlarni aniqlash uchun quyidagi sistemanini hosil qilamiz:

$$\begin{cases} 2A = 1, \\ 2A + 2B = 0, \quad \text{yoki} \quad A = \frac{1}{2}, \quad B = -\frac{1}{2}, \quad C = 1. \\ C = 1 \end{cases}$$

Demak, dastlabki tenglamanining umumiy yechimi quyidagicha bo'ladi:

$$y = C_1 \cos x + C_2 \sin x + \frac{1}{2}(x-1)e^x + e^{-x}.$$

**7- misol.**  $y'' + y' - 2y = x - e^x$  tenglamaning umumiy yechimi ni toping.

**Yechish.** Xarakteristik tenglamasi  $k^3 + k^2 - 2k = 0$ , uning ildizlari esa  $k_1 = -2$ ,  $k_2 = 0$ ,  $k_3 = 1$  bo'ladi. Demak, bir jinsli tenglamaning umumiy yechimi quyidagicha bo'ladi:

$$y = C_1 + C_2 e^x + C_3 e^{-2x},$$

$$f(x) = f_1(x) + f_2(x) = x - e^x.$$

$\alpha_1 = 0$ ,  $P_1(x) = x$ ,  $\alpha_2 = 1$ ,  $P_0(x) = -1$ ,  $\beta_1 = \beta_2 = 0$  bo'lgani uchun xususiy yechimni (2.38) formulaga asosan:

$$U(x) = U_1(x) + U_2(x) = x \cdot (Ax + B) + x \cdot Ce^x$$

ko'rinishga qidiramiz. Buni asosiy tenglamaga qo'yib,

$$3Ce^x + Cxe^x + 2A + 2Ce^x + Cxe^x - 4Ax - 2B - 2Ce^x - 2Cxe^x = x - e^x$$

yoki

$$-4Ax + (2A - 2B) + 3Ce^x = x - e^x.$$

ifodani hosil qilamiz. Noma'lum koefitsiyentlarni aniqlash uchun quyidagi sistema hosil bo'ladi:

$$\begin{cases} -4A = 1, \\ 2A - 2B = 0, \text{ yoki } A = -\frac{1}{4}, B = -\frac{1}{4}, \\ 3C = -1 \end{cases}$$

Natijada dastlabki tenglamaning izlangan umumiy yechimiga ega bo'lamiiz:

$$y = C_1 + C_2 e^x + C_3 e^{-2x} - \frac{1}{4}x(x+1) - \frac{1}{3}xe^x.$$

**8- misol.**  $y'' + y = 3 \sin x$  tenglamaning  $y(0) + y'(0) = 0$ ,  $y\left(\frac{\pi}{2}\right) + y'\left(\frac{\pi}{2}\right) = 0$  chegaraviy shartlarni qanoatlantiruvchi yechimi topilsin.

Yechish. Xarakteristik tenglama  $k^2 + 1 = 0$  va uning ildizlari  $k_{1,2} = \pm i = 0 \pm i$  bo'lgani uchun mos bir jinsli tenglamaning umumiy yechimi quyidagicha bo'ladi:

$$y = C_1 \cos x + C_2 \sin x.$$

$f(x) = e^{0x} (3\sin x + 0\cos x)$ , ya'ni  $\alpha + \beta i = 0 + i$ ,  $\alpha = 0$ ,  $\beta = 1$  bo'lgani hamda bu xarakteristik tenglamaning ildizi bilan aynan bir xil bo'lganligi uchun xususiy yechimni (2.41) formulaga asosan

$$U(x) = x(A \cos x + B \sin x)$$

ko'rinishda izlaymiz.

$$U' = (-A \sin x + B \cos x)x + (A \cos x + B \sin x),$$

$$U'' = 2(-A \sin x + B \cos x) + (-A \cos x - B \sin x)x$$

ifodalarni tenglamaga qo'ysak,

$$-2A \sin x + 2B \cos x - Ax \cos x - Bx \sin x + Ax \cos x + Bx \sin x = 3 \sin x$$

$$\text{yoki } -2A \sin x + 2B \cos x = 3 \sin x + 0 \cos x$$

hosil bo'ladi.

Noma'lum koeffitsiyentlarni aniqlash uchun quyidagi sistemaga ega bo'lamiz:

$$\begin{cases} -2A = 3, \\ 2B = 0 \end{cases} \quad \text{yoki} \quad A = -\frac{3}{2}, \quad B = 0.$$

Natijada, dastlabki tenglamanning umumiy yechimi

$$y = C_1 \cos x + C_2 \sin x - \frac{3}{2}x \cos x$$

ko'rinishda bo'ladi. Noma'lum  $C_1$  va  $C_2$  koeffitsiyentlarni aniqlash uchun chegaraviy shartlarni qarotatlantiramiz:

$$y' = -C_1 \sin x + C_2 \cos x - \frac{3}{2}\cos x + \frac{3}{2}x \sin x,$$

$$y'(0) = C_1 \cos 0 + C_2 \sin 0 - \frac{3}{2} \cdot 0 \cdot \cos 0 = C_1,$$

$$y''(0) = -C_1 \sin 0 + C_2 \cos 0 - \frac{3}{2} \cdot \cos 0 + \frac{3}{2} \cdot 0 \cdot \sin 0 = C_2 - \frac{3}{2},$$

$$y\left(\frac{\pi}{2}\right) = C_1 \cos \frac{\pi}{2} + C_2 \sin \frac{\pi}{2} - \frac{3}{2} \cdot \frac{\pi}{2} \cdot \cos \frac{\pi}{2} = C_2,$$

$$y'\left(\frac{\pi}{2}\right) = -C_1 \sin \frac{\pi}{2} + C_2 \cos \frac{\pi}{2} - \frac{3}{2} \cdot \cos \frac{\pi}{2} + \frac{3}{2} \cdot \frac{\pi}{2} \sin \frac{\pi}{2} = -C_1 + \frac{3\pi}{4}.$$

Shunday qilib,

$$\begin{cases} C_1 + C_2 - \frac{3}{2} = 0, \\ C_2 - C_1 + \frac{3\pi}{4} = 0 \end{cases} \quad \text{yoki} \quad \begin{cases} C_1 + C_2 = \frac{3}{2}, \\ -C_1 + C_2 = -\frac{3\pi}{4} \end{cases}$$

Sistema hosil bo'ladi va uning yechimi  $C_1 = \frac{3(2+\pi)}{8}$ ,  $C_2 = \frac{2-\pi}{8}$  bo'ladi. Demak, berilgan tenglamaning chegaraviy shartlarni qanoatlantiruvchi xususiy yechimi:

$$y = \frac{3}{8}[(\pi+2)\cos x - (\pi-2)\sin x] - \frac{3}{2}x \cos x.$$

**9- misol.**  $y'' + 6y' + 10y = 80e^x \cos x$  tenglamaning  $y(0)=4$ ,  $y'(0)=10$  boshlang'ich shartlarni qanoatlantiruvchi yechimi topilsin.

**Y e c h i s h.** Xarakteristik tenglama  $k^2 + 6k + 10 = 0$  va uning ildizlari  $k_{1,2} = -3 \pm i$  bo'lgani uchun mos bir jinsli tenglamaning umumiy yechimi  $y = e^{-3x}(C_1 \cos x + C_2 \sin x)$  ko'rinishda bo'ladi.  $f(x) = e^x(80 \cos x + 0 \cdot \sin x)$  bo'lgani hamda  $a + \beta i = 1 + i$  ekanligidan xususiy yechimni  $U(x) = e^x(A \cos x + B \sin x)$  ko'rinishda izlaymiz. Tegishli hisoblab tenglamaga qo'syak:

$$\begin{aligned} e^x(-2A \sin x + 2B \cos x) + 6e^x(A \cos x + B \sin x - A \sin x + B \cos x) + \\ + 10e^x(A \cos x + B \sin x) &= 80e^x \cos x. \end{aligned}$$

Noma'lum koeffitsiyentlarni aniqlash uchun quyidagi sistemani hosil qilamiz:

$$\begin{cases} 16A + 8B = 80, \\ -8A + 16B = 0 \end{cases} \quad \text{yoki} \quad A = 4, \quad B = 2.$$

Demak, dastlabki tenglama maning umumiy yechimi

$$y = e^{-3x} (C_1 \cos x + C_2 \sin x) + 2e^x (2 \cos x + \sin x).$$

Boshlang'ich shartlarni qanoatlantirib,  $C_1$  va  $C_2$  larni aniqlaymiz:  
 $y' = e^{-3x} (-3C_1 \cos x - 3C_2 \sin x - C_1 \sin x + C_2 \cos x) + 2e^x (3 \cos x - \sin x)$ ,  
 $y(0) = C_1 + 4 = 4$ ,  $y'(0) = -3C_1 + C_2 + 6 = 10$ , bundan  $C_1 = 0$ ,  $C_2 = 4$ .

Shunday qilib, bo shlang'ich shartlarni qanoatlantiruvchi xususiy yechim:

$$y = 4e^{-3x} \sin x + 2e^x (2 \cos x + \sin x).$$

**10- misol.**  $y'' + y = \operatorname{tg} x$  tenglama ning  $y(0) = y\left(\frac{\pi}{6}\right) = 0$  chegaraviy shartlarni qanoatlantiruvchi yechimi topilsin.

Yechish. Xarakteristik tenglama  $k^2 + 1 = 0$ , uning ildizlari esa  $k_{1,2} = \pm i$ . Shuning uchun mos bir jinsli tenglamadan umumiy yechimi:

$$y = C_1 \cos x + C_2 \sin x.$$

$f(x) = \operatorname{tg} x = e^{0x} \cdot \operatorname{tg} x$  bo'lgani uchun xususiy yechimni nomalum koefitsiyentlar usuli bilan izlab bo'lmaydi.

Shuning uchun, o'zgarmasni variatsiyalash usulidan foydalanamiz.

$U(x) = C_1(x) \cos x + C_2(x) \sin x$  deb olsak,  $C_1(x)$  va  $C_2(x)$  funktsiyalarni aniqlash uchun (2.32) formulaga asosan, quyidagi sistemaga ega bolamiz:

$$\begin{cases} C'_1(x)y_1 + C'_2(x)y_2 = 0, \\ C'_1(x)y'_1 + C'_2(x)y'_2 = f(x) \end{cases} \text{ yoki } \begin{cases} C'_1(x)\cos x + C'_2(x)\sin x = 0, \\ -C'_1(x)\sin x + C'_2(x)\cos x = \operatorname{tg} x. \end{cases}$$

Bu sistemani yechib,

$$C_1(x) = -\int \frac{\sin^2 x}{\cos x} dx + A = \sin x - \ln \left| \operatorname{tg} \left( \frac{x}{2} + \frac{\pi}{4} \right) \right| + A,$$

$$C_2(x) = -\cos x + B$$

ekanligini toparmiz.

Shunday qilib, dastlabki tenglamaning umumiy yechimi:

$$y = A \cos x + B \sin x - \cos x \ln \left| \tg \left( \frac{x}{2} + \frac{\pi}{4} \right) \right|.$$

Chegaraviy shartlarni qanoatlantirib,  $A$  va  $B$  ni aniqlash uchun, quyidagi sistemaga ega bo'lamiz:

$$\begin{cases} A \cos 0 + B \sin 0 - \cos 0 \cdot \ln \left| \tg \left( \frac{\pi}{4} \right) \right| = 0, \\ A \cos \frac{\pi}{6} + B \sin \frac{\pi}{6} - \cos \frac{\pi}{6} \cdot \ln \left| \tg \left( \frac{\pi}{3} \right) \right| = 0. \end{cases}$$

Bunda n  $A = 0$ ,  $B = \frac{\sqrt{3}}{2} \ln 3$ . Demak, chegaraviy shartlarni qanoatlantiruvchi yechim, quyidagicha bo'ladi:

$$y = \frac{\sqrt{3}}{2} \cdot \ln 3 \cdot \sin x - \cos x \cdot \ln \left| \tg \left( \frac{x}{2} + \frac{\pi}{4} \right) \right|.$$

**Quyidagi tenglamalarni yeching:**

220.  $y'' - 2y' + y = e^{2x}$ .

221.  $y'' - 4y = 8x^3$ .

222.  $y'' + 3y' + 2y = \sin 2x + 2 \cos 2x$ .

223.  $y'' + y = x + 2e^x$ .

224.  $y'' + 3y' = 9x$ .

225.  $y'' + 4y' + 5y = 5x^2 - 32x + 5$ .

226.  $y'' - 3y' + 2y = e^x$ .

227.  $y'' + 5y' + 6y = e^{-x} + e^{-2x}$ .

228.  $y''' + y'' = 6x + e^{-x}$ .

229.  $y'' + y' - 2y = 6x^2$ .

230.  $y'' - 5y' + 6y = 13 \sin 3x$ .

231.  $y'' + 2y' + y = e^x$ .

232.  $y'' + y' + 2,5y = 25 \cos 2x$ .

233.  $4y'' - y = x^3 - 24x$ .

234.  $y'' - 4y' + 3y = e^{5x}$ ,  $y(0) = 3$ ,  $y'(0) = 9$ .

235.  $y'' - 8y' + 16y = e^{4x}$ ,  $y(0) = 0$ ,  $y'(0) = 1$ .

$$236. \quad y'' + y = \cos 3x, \quad y\left(\frac{\pi}{2}\right) = 4, \quad y'\left(\frac{\pi}{2}\right) = 1.$$

$$237. \quad 2y' - y' = 1, \quad y(0) = 0, \quad y'(0) = 1.$$

$$238. \quad y'' + 4y = \sin 2x + 1, \quad y(0) = \frac{1}{4}, \quad y'(0) = 0.$$

$$239. \quad y'' + 4y = \cos 2x, \quad y(0) = y\left(\frac{\pi}{4}\right) = 0.$$

$$240. \quad y'' - y = 2 \operatorname{sh} x, \quad y(0) = 0, \quad y'(0) = 1.$$

$$241. \quad y'' - 4y' + 8y = 61e^{2x} \sin x, \quad y(0) = 0, \quad y'(0) = 4.$$

## 10- §. Eyler tenglamasi

O‘zgaruvchi koeffitsiyentli chiziqli

$$x^n y^{(n)} + a_1 x^{n-1} y^{(n-1)} + \dots + a_{n-1} x y^1 + a_n y = f(x) \quad (2.42)$$

yoki

$$(ax + b)^n y^{(n)} + a_1 (ax + b)^{n-1} y^{(n-1)} + \dots + a_{n-1} (ax + b) y' + a_n y = f(x) \quad (2.43)$$

tenglama *Eyler tenglamasi* deb ataladi,  $a_i$  – bu tenglamalar uchun o‘zgarmas koeffitsiyentlar.

(2.42) tenglamani  $x = e^t$  va (2.43) tenglamani esa  $ax + b = e^t$  almashirish orqali O‘zgarmas koeffitsiyentli chiziqli tenglama holiga keltiriladi.

**1- misol.**  $x^2 y'' - xy' + y = 0$  tenglamani yeching.

Yechish.  $x = e^t$  yoki  $t = \ln x$ ,  $\frac{dt}{dx} = \frac{1}{x} = \frac{1}{e^t} = e^{-t}$  almashirish

bajarib,  $y = y(x) = y[x(t)]$  funksiyaning murakkab funksiya sifatida hosilalarini topamiz:

$$y' = \frac{dy}{dx} = \frac{dy}{dt} \cdot \frac{dt}{dx} = \dot{y}e^{-t},$$

$$y'' = \frac{d}{dt} (e^{-t} \dot{y}) \frac{dt}{dx} = (\ddot{y}e^{-t} - e^{-t} \dot{y}) e^{-t} = e^{-2t} (\ddot{y} - \dot{y}).$$

Bu yerda  $\ddot{y}$  va  $\dot{y}$  ko'inishda  $t$  bo'yicha hosilalar belgilandi.

Bularni e'tiborga olsak, dastlabki tenglama quyidagi holga keladi:

$$e^{2t} \cdot e^{-2t} (\ddot{y} - \dot{y}) - e^t \cdot e^{-t} \dot{y} + y = 0$$

yoki

$$\ddot{y} - 2\dot{y} + y = 0.$$

Bu tenglamaning xarakteristik tenglamasi:

$$k^2 - 2k + 1 = 0, (k_{1,2} = 1),$$

umu miy yechimi esa

$$y = (C_1 + C_2 t) e^t = (C_1 + C_2 \ln x) \cdot x$$

ko'inishda bo'ladi.

**2 - misol.**  $(4x - 1)^2 y'' - 2(4x - 1)y' + 8y = 0$  tenglama yechilsin.

**Yechish.**  $4x - 1 = e^t$  yoki  $x = \frac{1}{4}(e^t + 1)$ ,  $\frac{dx}{dt} = \frac{1}{4}e^t$  yoki  $\frac{dt}{dx} = 4e^{-t}$  almashtirishlarni bajarsak,

$$y' = \frac{dy}{dt} \frac{dt}{dx} = 4e^{-t} \dot{y},$$

$$y'' = \frac{d}{dt} (4 \cdot e^{-t} y') \frac{dt}{dx} = (-4e^{-t} \cdot \ddot{y} + 4e^{-t} \dot{y}) 4e^{-t} = 16e^{-2t} (\ddot{y} - \dot{y}).$$

Bularni e'tiborga olsak, dastlabki tenglama

$$16e^{2t}e^{-2t}(\ddot{y} - \dot{y}) - 4 \cdot 2e^t \cdot e^{-t} \dot{y} + 8y = 0$$

yoki

$$2\ddot{y} - 3\dot{y} + y = 0$$

ko'inishdag'i o'zgarmas koeffitsiyentli chiziqli bir jinsli tenglamaga aylanadi. Xarakteristik tenglamasi:

$$2k^2 - 3k + 1 = 0, \left(k_1 = 1, k_2 = \frac{1}{2}\right).$$

Natijada umumiy yechim

$$y = C_1 e^t + C_2 e^{\frac{1}{2}t}$$

yoki

$$y = C_1(4x - 1) + C_2\sqrt{4x - 1}$$

ko'rinishda bo'ladi.

3-misol.  $y'' - xy' + y = \cos(\ln x)$  tenglamani yeching.

Yechish.  $x = e^t$  yoki  $t = \ln x$ ,  $\frac{dt}{dx} = \frac{1}{x} = e^{-t}$  almashtirishlarni bajarib, tegishli hosilalarini hisoblaymiz:

$$y' = e^{-t}\dot{y}, \quad y'' = e^{-2t}(\ddot{y} - \dot{y}).$$

Topilganlarni tenglamaga qo'ysak, quyidagi o'zgarmas koeffitsiyentli tenglama hosil bo'ladi:

$$\ddot{y} - 2\dot{y} + y = \cos t.$$

Xarakteristik tenglama  $k^2 - 2k + 1 = 0$ , ( $k_{1,2} = 1$ ) bo'lganidan, bir jinsli tenglamarning umumiy yechimi

$$y = (C_1 + C_2 t)e^t$$

ko'rinishda bo'ladi.

$f(x) = (1 \cdot \cos t + 0 \cdot \sin t) e^{0t}$  bo'lgani uchun xususiy yechimni

$$U(t) = A \cos t + B \sin t$$

ko'rinishda qidiramiz. Hosilalarni hisoblab:

$U' = -A \sin t + B \cos t, \quad U'' = -A \cos t - B \sin t,$   
tenglamaga qo'ysak,

$$-A \cos t - B \sin t + 2A \sin t - 2B \cos t + A \cos t + B \sin t = \cos t$$

yoki

$$-2B \cos t + 2A \sin t = \cos t.$$

Nomalum koeffitsiyentlarni aniqlaymiz:

$$\begin{cases} -2B = 1, \\ A = 0 \end{cases} \quad \text{yoki} \quad B = -\frac{1}{2}, \quad A = 0.$$

Demak,  $U(t) = -\frac{1}{2}\sin t$  hamda umumi yechim  $y = (C_1 + C_2 t)e^t - \frac{1}{2}\sin t$  ko'rinishda bo'ladi.

Dastlabki o'zgaruvchiga qaytsak,

$$y = (C_1 + C_2 \ln x)x - \frac{1}{2}\sin \ln x$$

umumi yechimni hosil qilamiz.

**Quyidagi** Eyler tenglamalarini yeching:

**242.**  $x^2 y'' - 2y = 0.$

**243.**  $x^2 y'' + 2xy' - n(n+1)y = 0.$

**244.**  $x^2 y'' + 5xy' + 4y = 0.$

**245.**  $x^2 y'' + xy' + y = 0.$

**246.**  $xy'' + 2y' = 10x.$

**247.**  $x^2 y'' - 6y = 12\ln x.$

**248.**  $x^2 y'' - xy' + 2y = 0.$

**249.**  $x^2 y'' - 3xy' + 3y = 3\ln^2 x.$

**250.**  $x^2 y'' + xy' + y = \sin(2\ln x)$

**251.**  $x^2 y'' - 2xy' + 2y = 4x.$

**252.**  $x^3 y'' + 3x^2 y' + xy = 6\ln x.$

**253.**  $x^2 y'' - 4xy' + 6y = x^5.$

**254.**  $x^2 y'' + xy' + y = x.$

**255.**  $x^3 y''' - 3xy' + 3y = 0.$

**256.**  $x^2 y'' + 3xy' + y = \frac{1}{x}, \quad y(1) = 1, \quad y'(1) = 0.$

**257.**  $x^2 y'' - 3xy' + 4y = \frac{1}{2}x^3, \quad y(1) = \frac{1}{2}, \quad y(4) = 0.$

## 11 – §. Differensial tenglamalarni qator yordamida yechish

Ba'zi bir differensial tenglamalarni elementar funksiyalar yordamida integrallash mumkin bo'lmaydi, bunday tenglamalarning yechimini

$$y = \sum_{n=0}^{\infty} C_n (x - x_0)^n \quad (2.44)$$

darajali qator ko‘rinishida izlanadi.

Normalum  $C_n$  koeffitsiyentlarni (2.44) ni tenglamaga qo‘yib, tenglikning har ikki tomonidagi bir xil darajali hadlar oldidagi koefitsiyentlarni tenglab topiladi, ya’ni

$$y' = f(x; y) \quad (2.45)$$

tenglamaga qo‘yilgan  $y(x_0) = y_0$  boshlang‘ich shartni qanoatlatni uchun yechimini to pish haqidagi Koshi masalasining yechimini

$$y = \sum_{n=0}^{\infty} \frac{y^{(n)}(x_0)}{n!} (x - x_0)^n \quad (2.46)$$

Taylor qatori yordamida topish qulay, bu yerda

$$y(x_0) = y_0, \quad y'(x_0) = f(x_0; y_0), \dots$$

**1- misol.**  $y'' - x^2 y = 0$  tenglamani yeching.

Yechish. Bu tenglamaning yechimini

$$y = C_0 + C_1 x + C_2 x^2 + \dots + C_n x^n + \dots$$

darajali qator ko‘rinishda qidiramiz.

Tegishli hosilalarini hisoblab,

$$y' = C_1 + 2C_2 x + 3C_3 x^2 + \dots + nC_n x^{n-1} + \dots ,$$

$$y'' = 2 \cdot 1 \cdot C_2 + 3 \cdot 2 \cdot C_3 x + \dots + n(n-1)C_n x^{n-2} + \dots ,$$

natijalamni tenglama ga qo‘yamiz:

$$\begin{aligned} & 2 \cdot 1 \cdot C_2 + 3 \cdot 2 \cdot C_3 x + \dots + n(n-1)C_n x^{n-2} - \\ & - x^2 (C_0 + C_1 x + C_2 x^2 + \dots + C_n x^n + \dots) = 0. \end{aligned}$$

$x$  ni bir xil darajalarini bo‘yicha guruylasak:

$$\begin{aligned} & 2 \cdot 1 \cdot C_2 + 3 \cdot 2 \cdot C_3 x + (4 \cdot 3C_4 - C_0)x^2 + (5 \cdot 4 \cdot C_5 - C_1)x^3 + \dots \\ & + [(n+4)(n+3)C_{n+4} - C_n]x^{n+2} \dots = 0 \end{aligned}$$

yoki

$$2 \cdot 1 \cdot C_2 + 3 \cdot 2 \cdot C_3 x + \sum_{n=0}^{\infty} [(n+4)(n+3)C_{n+4} - C_n] x^{n+2} = 0.$$

Bundan

$$C_2 = 0, C_3 = 0, \dots, (n+4)(n+3)C_{n+4} - C_n = 0$$

yoki

$$C_{n+4} = \frac{C_n}{(n+3)(n+4)} \quad (n = 0, 1, 2, \dots).$$

Bu tenglik barcha noma'lum koefitsiyentlarni aniqlashga yordam beradi:

$$C_{4n} = \frac{C_0}{3 \cdot 4 \cdot 7 \cdot 8 \dots (4n-1)4n}, \quad C_{4n+1} = \frac{C_1}{4 \cdot 5 \cdot 8 \cdot 9 \dots 4n(4n+1)},$$

$$C_{4n+2} = C_{4n+3} = 0 \quad (n = 0, 1, 2, \dots).$$

Shunday qilib, quyidagi umumi yechimiga ega bo'ldik:

$$y = C_0 \sum_{n=0}^{\infty} \frac{x^{4n}}{3 \cdot 4 \cdot 7 \cdot 8 \dots (4n-1)4n} + C_1 \sum_{n=0}^{\infty} \frac{x^{4n+1}}{4 \cdot 5 \cdot 8 \cdot 9 \dots 4n(4n+1)}.$$

Hosil bo'lgan qator son o'qidagi barcha nuqtalarda yaqinlashuvchi bo'lib, u ikkita chiziqli erkli yechimlar yig'indisidan iborat:

**2- misol.**  $y' = x^2 + y^2$  tenglamaning,  $y(0)=1$  shartni bajaruvchi yechimini Teylor qatori yordamida birinchi oltita hadlari yig'indisi shaklida toping.

Yechish.  $y(0)=1$  boshlang'ich shartga asosan  $y'(0) = 0^2 + 1^2 = 1$ ,

ikkinchchi tartibli hosila  $y'' = 2x + 2y \cdot y'$  va uning qiymati

$$y''(0) = 2 \cdot 0 + 2 \cdot 1 \cdot 1^2 = 2;$$

uchinchchi tartibli hosila  $y''' = 2 + 2y'^2 + 2yy''$  va uning qiymati

$$y'''(0) = 2 + 2 \cdot 1^2 + 2 \cdot 1 \cdot 2 = 8;$$

To'rtinchchi tartibli hosila  $y^{IV} = 6y'y'' + 2yy'''$  va uning qiymati

$$y^{IV}(0) = 6 \cdot 1 \cdot 2 + 2 \cdot 1 \cdot 8 = 28;$$

beshinchi tartibli hosila  $y^V = 6y''^2 + 8y'y''' + 2yy^{IV}$  va uning qiymati  
 $y^V(0) = 6 \cdot 2^2 + 8 \cdot 1 \cdot 8 + 2 \cdot 1 \cdot 28 = 144.$

Izlangan yechim formulasi

$$y = 1 + \frac{x}{1!} y'(0) + \frac{x^2}{2!} y''(0) + \frac{x^3}{3!} y'''(0) + \frac{x^4}{4!} y^{IV}(0) + \frac{x^5}{5!} y^V(0).$$

$$\text{Demak, } y = 1 + \frac{x}{1!} + \frac{2x^2}{2!} + \frac{8x^3}{3!} + \frac{28x^4}{4!} + \frac{144x^5}{5!}.$$

**3- misol.**  $y'' = x + y^2$  tenglamanning  $y(0) = 0, y'(0) = 1$  shartlarni qanoatlantiruvchi yechimini Teylor qatori ko‘rinishida to‘rtta noldan farqli had yig‘indisi ko‘rinishida toping.

**Yechish.** Teylor formulasiga asosan yechim ko‘rinishi

$$y = y(0) + \frac{x}{1!} y'(0) + \frac{x^2}{2!} y''(0) + \frac{x^3}{3!} y'''(0) + \frac{x^4}{4!} y^{IV}(0) + \dots \text{ bo‘lgani uchun boshlang‘ich shartlarda foydalanganib:}$$

$$y''(0) = 0 + 0^2 = 0,$$

$$y''' = 1 + 2yy' \text{ va uning qiymati } y'''(0) = 1 + 2 \cdot 0 \cdot 1 = 1,$$

$$y^{IV} = 2y'^2 + 2yy'' \text{ va uning qiymati } y^{IV}(0) = 2 \cdot 1^2 + 2 \cdot 0 \cdot 0 = 2,$$

$$y^V = 6y'y'' + 2yy''' \text{ va uning qiymati } y^V(0) = 6 \cdot 1 \cdot 1 + 2 \cdot 0 \cdot 1 = 0,$$

$$y^{VI} = 6y''^2 + 8y'y''' + 2y \cdot y^{IV} \text{ va uning qiymati}$$

$$y^{VI}(0) = 6 \cdot 0 + 8 \cdot 1 \cdot 1 + 2 \cdot 0 \cdot 2 = 8.$$

$$\text{Demak, } y = \frac{x}{1!} + \frac{x^3}{3!} + \frac{2x^4}{4!} + \frac{8x^6}{6!} + \dots = x + \frac{x^3}{6} + \frac{x^4}{12} + \frac{x^6}{90} + \dots$$

**Quyidagi differensial tenglamlarning yechimlarini darajali qatorlar ko‘rinishida toping:**

**258.**  $y' + xy = 0.$

**259.**  $y' = x - 2y, y(0) = 0.$

**260.**  $y'' + xy' + y = 0.$

**261.**  $y'' - xy' - 2y = 0.$

**262.**  $y'' + x^2y = 0, \quad y(0) = 0, \quad y'(0) = 1.$

**Quyidagi tenglamalarning yechimlarini ko'rsatilgan aniqlikda noldan farqli Teylor qatori yig'indisi shaklida toping:**

**263.**  $y' = x^2 y + y^3$ ,  $y(0) = 1$ , to'rtta noldan farqli hadlar yig'indisi shaklida.

**264.**  $y' = x + 2y^2$ ,  $y(0) = 0$ , ikkita noldan farqli had yig'indisi shaklida.

**265.**  $y'' - xy^2 = 0$ ,  $y(0) = 1$ ,  $y'(0) = 1$ , to'rtta noldan farqli had yig'indisi shaklida.

**266.**  $y' = 2x - y$ ,  $y(0) = 2$ , aniq yechimi topilsin.

**267.**  $y' = y^2 + x$ ,  $y(0) = 1$ , birinchi beshta hadi yig'indisi ko'rinishidagi yechimi topilsin.

**268.**  $y'' = (2x - 1)y - 1$ ,  $y(0) = 0$ ,  $y'(0) = 1$ , biinchi beshta hadi yig'indisi ko'rinishidagi yechimi topilsin.

## DI FFERENSIAL TENGLAMALAR SIS TEMASI

### 1 – §. Normal sistema

Ushbu

$$\frac{dx_i}{dt} = f_i(t, x_1, x_2, \dots, x_n), \quad (i = \overline{1, n}) \quad (3.1)$$

ko‘rinishdagi sistema *bir-inchi tartibili*  $n$  ta differensial tenglamalarning normal sistemasi yoki  $x_i = x_i(t)$  noma’lum funksiyaning hosilasiga nisbatan yechilgan differensial tenglamalar sistemasi deyiladi. Bunda tenglamalar soni noma’lum funksiyalar soniga teng, deb faraz qilinadi.

Agar (3.1) sistemaning o‘ng tomonidagi  $f_i$  ( $i = \overline{1, n}$ ) funksiyalar  $x_1, x_2, \dots, x_n$  larga nisbatan chiziqli bo‘lsa, u vaqtida (3.1) sistema chiziqli differensial tenglamalar sistemasi deyiladi.

(3.1) sistemaning  $(a; b)$  intervaldagi yechimi deb,  $(a; b)$  intervalda uzluksiz differensial anuvchisi va sistemaning hamma tenglamasini qanoatlanтирадиган  $n$  ta  $x_1(t), x_2(t), x_3(t), \dots, x_n(t)$  funksiya to‘plamiga aytildi.

Differensial tenglamalarni ng normal sistemasi uchun Koshi masalasi shunday yechimni topishidan iboratki, u  $t=t_0$  da berilgan quyidagi qiymatlarni qabul qilsin:

$$x_1|_{t=t_0} = x_{10}, \quad x_2|_{t=t_0} = x_{20}, \dots, \quad x_n|_{t=t_0} = x_{n0}. \quad (3.2)$$

Bu qiymatlardan (3.1) *normal sistemaning boshlang‘ich shartlari* deyiladi. Ularning soni noma’lum funksiyalar soni bilan bir xil.

(3.1) sistemaning umumi yechimi deb,  $n$  ta ixtiyoriy  $C_1, C_2, \dots, C_n$  o‘zgarmas larga bog‘liq bo‘lgan ushbu  $x_i = \varphi_i(t, C_1, C_2, \dots, C_n)$  funksiyalar sistemasiga aytilda. Ixtiyoriy o‘zgarmaslarning mumkin bo‘lgan ba’zi qiymatlarida hosil bo‘ladigan yechimlar xususiy yechimlar deyiladi.

*n*-tartibli bitta differensial tenglamani tenglamalarning normal sistemasiga keltirish mumkin. Umuman aytganda, buning aksi ham o'rinli, ya'ni birinchi tartibli *n* ta differensial tenglamaning normal sistemasi *n*-tartibli bitta differensial tenglamaga ekvivalentdir.

### 1- misol.

$$\left\{ \begin{array}{l} \frac{dx}{dt} = ax + by + f(t), \\ \frac{dy}{dt} = cx + dy + g(t) \end{array} \right. \quad (3.3)$$

$$\left\{ \begin{array}{l} \frac{dx}{dt} = ax + by + f(t), \\ \frac{dy}{dt} = cx + dy + g(t) \end{array} \right. \quad (3.4)$$

Sistemda berilgan bo'lsin. Bu yerda  $a, b, c, d$  – o'zgarmas koefitsiyentlar,  $f(t)$  va  $g(t)$  – berilgan funksiyalar,  $x(t)$  va  $y(t)$  – nomalum funksiyalar.

(3.3) tenglamadan

$$y = \frac{1}{b} \left( \frac{dx}{dt} - ax - f(t) \right) \quad (3.5)$$

ni topamiz va uning ikkala qismini differensiallaymiz:

$$\frac{dy}{dt} = \frac{1}{b} \left( \frac{d^2x}{dt^2} - a \frac{dx}{dt} - \frac{df}{dt} \right). \quad (3.6)$$

(3.5) va (3.6) ni (3.4) ga keltirib qo'yamiz. Natijada  $x(t)$  ga nisbatan ikkinchi tartibli differensial tenglamani hosil qilamiz:

$$A \frac{d^2x}{dt^2} + B \frac{dx}{dt} + Cx + P(t) = 0, \quad (3.7)$$

Bu yerda  $A, B, C$  – o'zgarmaslar.

2- misol. Quyidagi tenglamalar sistemasining yechimini toping:

$$\left\{ \begin{array}{l} \frac{dx}{dt} = y + 1, \\ \frac{dy}{dt} = x + 1. \end{array} \right.$$

Birinchi tenglamadan

$$y = \frac{dx}{dt} - 1 \quad (3.8)$$

ni topib, uning ikkala tomonini  $t$  bo'yicha differensiallaymiz:

$$\frac{dy}{dt} = \frac{d^2x}{dt^2}. \quad (3.9)$$

(3.8) va (3.9) ifodalarini sistemaning ikkinchi tenglamasiga keltirib qo'yib,  $x(t)$  ga nisbatan o'zgarmas koefitsiyentli ikkinchi tartibli differensial tenglamani hosil qilamiz:

$$\frac{d^2x}{dt^2} - x - 1 = 0.$$

Bu tenglamaning umumiy yechimi:

$$x = C_1 e^t + C_2 e^{-t} - 1. \quad (3.10)$$

(3.10) funksiyani  $t$  bo'yicha differensiallab, (3.8) ifodaga keltirib qo'ysak,

$$y = C_1 e^t - C_2 e^{-t} - 1$$

ni topamiz. Demak, sistemaniqning umumiy yechimi:

$$\begin{cases} x = C_1 e^t + C_2 e^{-t} - 1, \\ y = C_1 e^t - C_2 e^{-t} - 1. \end{cases}$$

## 2- §. O'zgarmas koefitsiyentli chiziqli bir jinsli differensial tenglamalar sistemasini Eyler usulida integrallash

Quyidagi bir jinsli chiziqli

$$\begin{cases} \frac{dx}{dt} = ax + by + cz, \\ \frac{dy}{dt} = a_1 x + b_1 y + c_1 z, \\ \frac{dz}{dt} = a_2 x + b_2 y + c_2 z \end{cases} \quad (3.11)$$

sistemani qaraymiz va un dagi koefitsiyentlarni o'zgarmas deb hisoblaymiz. (3.11) sistemaning yechimini ko'satkichli funksiyalar ko'rinishida izlaymiz:

$$x = \lambda e^{rt}, \quad y = \mu e^{rt}, \quad z = \nu e^{rt}, \quad (3.12)$$

bu ye rda  $r$ ,  $\lambda$ ,  $\mu$ ,  $v$  o‘zgarmas bo‘lib, uñarni (3.12) ifodalar (3.11) sistema ni qanoatlantiradigan qilib aniqlash lozim. (3.11) sistemaga (3.12) qiyatlarni qo‘yib,  $e^r$  ga qisqartirib va  $\lambda$ ,  $\mu$ ,  $v$  oldidagi koefitsiyentlarni tanlab, quyidagi algebraik tenglamalar sistemasini hosil qilamiz:

$$\begin{cases} (a - r)\lambda + b\mu + cv = 0, \\ a_1\lambda + (b_1 - r)\mu + c_1v = 0, \\ a_2\lambda + b_2\mu + (c_2 - r)v = 0. \end{cases} \quad (3.13)$$

(3.13) sistema –  $\lambda$ ,  $\mu$ ,  $v$  ga nisbatan chiziqli bir jinsli tenglamalar sistema sidir. Demak, sistema noldan farqli yechimlarga ega bo‘lishi uchun sistemaning determinanti nolga teng bo‘lishi zarur va yetarlidir. Shunday qilib,

$$\Delta = \begin{vmatrix} a - r & b & c \\ a_1 & b_1 - r & c_1 \\ a_2 & b_2 & c_2 - r \end{vmatrix} = 0 \quad (3.14)$$

tenglik bajarilishi kerak.

(3.14) tenglama  $r$  ga nisbatan uchinchi darajali tenglamadir, u (3.11) sistemaning xarakteristik tenglamasi deyiladi.

**a) Xarakteristik tenglamaning  $r_1$ ,  $r_2$ ,  $r_3$  ildizlari haqiqiy va har xil bo‘lsim.** Bu ildizlarning har biri uchun mos (3.13) tenglamalar sistemasini yozamiz va  $\lambda_1$ ,  $\mu_1$ ,  $v_1$ ;  $\lambda_2$ ,  $\mu_2$ ,  $v_2$ ;  $\lambda_3$ ,  $\mu_3$ ,  $v_3$  koeffitsiyentlarni aniqlaymiz. Agar (3.14) tenglamaning  $r_1$ ,  $r_2$ ,  $r_3$  ildizlariga mos (3.11) sistemaning xususiy yechimlarini  $x_1$ ,  $y_1$ ,  $z_1$ ;  $x_2$ ,  $y_2$ ,  $z_2$ ;  $x_3$ ,  $y_3$ ,  $z_3$  orqali belgilasak, (3.11) differensial tenglamalar sistemasining umumiy yechimi

$$\begin{cases} x(t) = C_1 x_1 + C_2 x_2 + C_3 x_3, \\ y(t) = C_1 y_1 + C_2 y_2 + C_3 y_3, \\ z(t) = C_1 z_1 + C_2 z_2 + C_3 z_3 \end{cases} \quad (3.15)$$

ko‘rinishda bo‘ladi.

**1-misol.** Ushbu sistem aning umumi yechimini toping:

$$\begin{cases} \frac{dx}{dt} = 3x - y + z, \\ \frac{dy}{dt} = -x + 5y - z, \\ \frac{dz}{dt} = x - y + 3z. \end{cases} \quad (3.16)$$

Yechish. Sistemning xarakteristik tenglamasini tuzamiz:

$$\begin{vmatrix} 3-r & -1 & 1 \\ -1 & 5-r & -1 \\ 1 & -1 & 3-r \end{vmatrix} = 0$$

yoki  $r^3 - 11r^2 + 36r - 36 = 0$ . Uning ildizlari:  $r_1 = 2$ ,  $r_2 = 3$ ,  $r_3 = 6$ .

Demak, (3.16) sistemiining xususiy yechimlarini

$$\begin{aligned} x_1 &= \lambda_1 e^{2t}, \quad y_1 = \mu_1 e^{2t}, \quad z_1 = v_1 e^{2t}, \\ x_2 &= \lambda_2 e^{3t}, \quad y_2 = \mu_2 e^{3t}, \quad z_2 = v_2 e^{3t}, \\ x_3 &= \lambda_3 e^{6t}, \quad y_3 = \mu_3 e^{6t}, \quad z_3 = v_3 e^{6t} \end{aligned}$$

ko'rinishda izlaymiz.

$r_1 = 2$  da  $\lambda$ ,  $\mu$ ,  $v$  ni aniqlash uchun (3.13) tenglamalar sistemasi quyidagicha yoziladi:

$$\begin{cases} (3-2)\lambda_1 - \mu_1 + v_1 = 0, \\ -\lambda_1 + (5-2)\mu_1 - v_1 = 0, \\ \lambda_1 - \mu_1 + (3-2)v_1 = 0 \end{cases} \quad \text{yoki} \quad \begin{cases} \lambda_1 - \mu_1 + v_1 = 0, \\ -\lambda_1 + 3\mu_1 - v_1 = 0, \\ \lambda_1 - \mu_1 + v_1 = 0. \end{cases}$$

Bu sistema yechimlari:  $\lambda_1 = 1$ ,  $\mu_1 = 0$ ,  $v_1 = -1$ .

$r_2 = 3$  uchun

$$\begin{cases} \lambda_2 - \mu_2 + v_2 = 0, \\ -\lambda_2 + 2\mu_2 - v_2 = 0, \\ \lambda_2 - \mu_2 = 0 \end{cases}$$

sistemani hosil qilamiz. Bu sistemning yechimlari sifatida  $\lambda_2 = 1$ ,  $\mu_2 = 1$ ,  $v_2 = 1$  ni olishi mumkin.

$r_3=6$  da (3.13) tenglamalar sistemi quyidagicha bo'ldi:

$$\begin{cases} -3\lambda_3 - \mu_3 + v_3 = 0, \\ -\lambda_3 - \mu_3 - v_3 = 0, \\ \lambda_3 - \mu_3 - 3v_3 = 0. \end{cases}$$

$\lambda_3=1$  deb,  $\mu_3=-2$ ,  $v_3=1$  larni topamiz.

Shunday qilib, (3.16) sistemaniнг xususiy yechimlari:

$$\begin{aligned} x_1 &= e^{2t}, & y_1 &= 0, & z_1 &= -e^{2t}; \\ x_2 &= e^{3t}, & y_2 &= e^{3t}, & z_2 &= e^{3t}; \\ x_3 &= e^{6t}, & y_3 &= -2e^{6t}, & z_3 &= e^{6t}. \end{aligned}$$

Bu xususiy yechimlar (3.16) sistemaniнг fundamental yechimlar sistemasidır. Demak, (3.16) sistemaniнг umumiy yechimi (3.15) formulaga ko'ra quyidagicha bo'ldi:

$$\begin{aligned} x(t) &= C_1 e^{2t} + C_2 e^{3t} + C_3 e^{6t}, \\ y(t) &= C_2 e^{3t} - 2C_3 e^{6t}, \\ z(t) &= -C_1 e^{2t} + C_2 e^{3t} + C_3 e^{6t}. \end{aligned} \quad (3.17)$$

b) Xarakteristik tenglamaniнг ildizlari kompleks sonlar bo'lgan holni qaraymiz.

2-misol. Sistemaning yechimini toping:

$$\begin{cases} \frac{dx}{dt} = x - 5y; \\ \frac{dy}{dt} = 2x - y. \end{cases} \quad (3.18)$$

**Yechish.** Berilgan sistemaniнг xarakteristik tenglamasi

$$\begin{vmatrix} 1-r & -5 \\ 2 & -1-r \end{vmatrix} = r^2 + 9 = 0$$

ko'rinishda bo'lib, u ildizlarga ega. (3.13) formulaga asosan

$$\begin{cases} (1-r)\lambda - 5\mu = 0, \\ 2\lambda - (1+r)\mu = 0 \end{cases} \quad (3.19)$$

sistemaga ega bo'lamiz.  $r_1=3i$  uchun

$$\begin{cases} (1-3i)\lambda_1 - 5\mu_1 = 0, \\ 2\lambda_1 - (1+3i)\mu_1 = 0. \end{cases}$$

$\lambda_1=5$  deb,  $\mu_1=1-3i$  ni topamiz. U holda

$$x_1 = 5e^{3it}, \quad y_1 = (1-3i)e^{3it} \quad (3.20)$$

xususiy yechimlarni topamiz.  $r_2=-3i$  ni (3.19) ga qo'yib,  $\lambda_2=5$ ,  $\mu_2=1+3i$  larni topamiz.

U holda xususiy yechimlar

$$x_1 = 5e^{-3it}, \quad y_1 = (1+3i)e^{-3it} \quad (3.21)$$

ko'rinishda bo'ladi.

Yangi fundamental yechimlar sistemasiga o'tamiz:

$$\begin{cases} \overline{x_1} = \frac{x_1+x_2}{2}, & \overline{x_2} = \frac{x_1-x_2}{2}, \\ \overline{y_1} = \frac{y_1+y_2}{2}, & \overline{y_2} = \frac{y_1-y_2}{2}. \end{cases} \quad (3.22)$$

Bundan Euler formulasi  $e^{+\alpha it} = \cos \alpha t \pm i \sin \alpha t$  dan foydalanib

$$\begin{aligned} \overline{x_1} &= 5 \cos 3t, & \overline{x_2} &= 5 \sin 3t, \\ \overline{y_1} &= \cos 3t + 3 \sin 3t, & \overline{y_2} &= \sin 3t - 3 \cos 3t \end{aligned}$$

larni topamiz. U holda berilgan sistemaning umumiy yechimi quyidagi ko'rinishda bo'ladi:

$$x(t) = 5C_1 \cos 3t + 5C_2 \sin 3t;$$

$$y(t) = C_1 (\cos 3t + 3 \sin 3t) + C_2 (\sin 3t - 3 \cos 3t).$$

d) Karakteristik tenglamaning ildizlari karrali bo'lsin.

3- misol. Sistemaning yechimini toping:

$$\begin{cases} \frac{dx}{dt} = 2x + y, \\ \frac{dy}{dt} = 4y - x. \end{cases} \quad (3.23)$$

Yechish. Sistemaning xarakteristik tenglamasi

$$\begin{vmatrix} 2-r & 1 \\ -1 & 4-r \end{vmatrix} = r^2 - 6r + 9 = 0$$

$r_1=r_2=3$  ildizga ega. Sistemaning yechimini

$$\begin{cases} x = (\lambda_1 + \mu_1 t) e^{3t}, \\ y = (\lambda_2 + \mu_2 t) e^{3t} \end{cases} \quad (3.24)$$

ko'rinishda izlash kerak. (3.24) ifodani (3.23) sistemaning birinchi tenglamasiga qo'yib

$$3(\lambda_1 + \mu_1 t) + \mu_1 = 2(\lambda_1 + \mu_1 t) + (\lambda_2 + \mu_2 t) \quad (3.25)$$

tenglikka ega bo'lamiz. Chap va o'ng tomondagi bir xil darajali  $t$  ning koeffitsiyenlarini tenglashtirib

$$\begin{cases} 3\lambda_1 + \mu_1 = 2\lambda_1 + \lambda_2, \\ 3\mu_1 = 2\mu_1 + \mu_2 \end{cases}$$

sisteman ni hosil qilamiz. Bundan

$$\begin{cases} \lambda_2 = \lambda_1 + \mu_1, \\ \mu_2 = \mu_1 \end{cases}$$

ni topamiz.  $\lambda_1$  va  $\mu_1$  sonlarni ixtiyoriy parametr deb olishimiz mumkin.  $\lambda_1 = C_1$  va  $\mu_1 = C_2$  deb belgilasak, (3.13) sistemaning umumiy yechimi

$$\begin{cases} x = (C_1 + C_2 t) e^{3t}, \\ y = (C_1 + C_2 + C_2 t) e^{3t} \end{cases}$$

ko'rinishda bo'ladi.

### 3 - §. Differensial tenglamalar sistemasining birinchi integrali

Differensial tenglamalar sistemasi

$$\frac{dx_i}{dt} = f_i(t, x_1, x_2, \dots, x_n), \quad (i = \overline{1, n}) \quad (3.26)$$

ni integrallashning bu usuli quyidagidan iborat: arifmetik amallar (qo'shish, ayirish, ko'paytirish, bo'lish) yordamida (3.26) tenglamalar sistemasi osongina integrallanadigan

$$F\left(t, U, \frac{dU}{dt}\right) = 0 \quad (3.27)$$

tenglamaga keltiriladi, bu yerda  $U = U(t, x_1, x_2, \dots, x_n)$ .

**1-misol.** Sistemaning yechimini toping:

$$\begin{cases} \frac{dx}{dt} = 2(x^2 + y^2)t, \\ \frac{dy}{dt} = 4xyt. \end{cases} \quad (3.28)$$

Yechis **h**. Tenglamalarni hadma-had qo'shib,

$$\frac{d(x+y)}{dt} = 2(x+y)^2 t$$

tenglamani hosil qilamiz. Uni integrallab

$$\frac{1}{x+y} + t^2 = C_1$$

ni topamiz. Tenglamalarni hadma-had ayirib, quyidagini topamiz:

$$\frac{d(x-y)}{dt} = 2t(x-y)^2,$$

bundan

$$\frac{1}{x-y} + t^2 = C_2$$

ni hosil qilamiz. Shunday qilib, sistemaning ikkita birinchi integralini topdik:

$$t^2 + \frac{1}{x+y} = C_1, \quad t^2 + \frac{1}{x-y} = C_2. \quad (3.29)$$

(3.29) ifoda – (3.28) sistemining umumiy integrali. (3.29) sistemani  $x$  va  $y$  noma'lum funksiyalarga nisbatan yechib, (3.28) differentsiyal tenglamalarni umumiy yechirmini topamiz:

$$x(t) = \frac{C_1 + C_2 - 2t^2}{2(C_1 - t^2)(C_2 - t^2)}, \quad y(t) = \frac{C_2 - C_1}{2(C_1 - t^2)(C_2 - t^2)}.$$

**2- misol.** Quyidagi sistemaning yechimini toping:

$$\begin{cases} \frac{dx}{dt} = \frac{x-y}{z-t}, \\ \frac{dy}{dt} = \frac{x-y}{z-t}, \\ \frac{dz}{dt} = x - y + 1, \end{cases} \quad (3.30)$$

**Y e c h i s h .** Sistemaning birinchi tenglamasidan ikkinchi tenglamasini hadima-had ayirib,

$$\frac{d(x-y)}{dt} = 0$$

tenglamani hosil qilamiz. Uni integrallab, (3.30) sistemaning birinchi integralini topamiz:

$$x - y = C_1. \quad (3.31)$$

(3.31) ifodani (3.30) sistemaning ikkinchi va uchinchi tenglamlariga qo'yib, ikki noma'lumli tenglarnalar sistemasiga kelamiz:

$$\begin{cases} \frac{dy}{dt} = \frac{C_1}{z-t}, \\ \frac{dz}{dt} = C_1 + 1. \end{cases} \quad (3.32)$$

(3.32) sistemaning ikkinchi tenglamasidan

$$z = (C_1 + 1)t + C_2 \quad (3.33)$$

ni topamiz. (3.33) ni (3.32) sistemaning birinchi tenglamasiga keltirib qo'yamiz va

$$y = \ln |C_1 t + C_2| + C_3 \quad (3.34)$$

ni topamiz. Shunday qilib, (3.30) sistemaning umumiy yechimi:

$$x(t) = \ln |C_1 t + C_2| + C_1 + C_3,$$

$$y(t) = \ln |C_1 t + C_2| + C_3,$$

$$z(t) = (C_1 + 1)t + C_2.$$

3- misol. Quyidagi

$$\begin{cases} \frac{dx}{dt} = 3x + 5y, \\ \frac{dy}{dt} = -2x - 8y \end{cases} \quad (3.35)$$

sistemaning  $x|_{t=0} = 2$ ,  $y|_{t=0} = 5$  boshlang'ich shartlarni qanoatlantiruvchi xususiy yechimini toping.

Yechish. Sistemaning birinchi tenglamasini 2 ga ko'paytirib, ikkinchi tenglamaga hadma-had qo'shib,

$$\frac{d(2x+y)}{dt} = 2(2x + y)$$

tenglamani hosil qilamiz. Bundan

$$2x + y = C_1 e^{2t}$$

$$\text{yoki} \quad y = C_1 e^{2t} - 2x \quad (3.36)$$

birinchi integralni topamiz. (3.36) ni (3.35) sistemaning birinchi tenglamasiga keltirib qo'yib, x ga nisbatan chiziqli tenglamaga kelimiz:

$$\frac{dx}{dt} + 7x = 5C_1 e^{2t}. \quad (3.37)$$

Bundan

$$x(t) = C_2 e^{-7t} + \frac{5}{9} C_1 e^{2t} \quad (3.38)$$

yechimni topamiz. Shunday qilib, (3.35) sistemaning umumi yechimi

$$\begin{cases} x(t) = C_2 e^{-7t} + \frac{5}{9} C_1 e^{2t}, \\ y(t) = -\frac{1}{9} C_1 e^{2t} - 2C_2 e^{-7t}. \end{cases} \quad (3.39)$$

Sistemaning boshlang'ich shartlarni qanoatlantiruvchi xususiy yechimini topish uchun (3.39) ga t, x va y larning o'rniغا mos

ravishda 0, 2 va 5 sonlarni qo'yib,  $C_1$  va  $C_2$  larga nisbatan quyidagi sistemani hosil qilamiz:

$$\begin{cases} C_2 + \frac{5}{9}C_1 = 2, \\ -\frac{1}{9}C_1 - 2C_2 = 5. \end{cases} \quad (3.40)$$

Buridan  $C_1=9$ ,  $C_2=-3$  ni topamiz, demak, (3.35) sistemaning xussiy yechimi:

$$\begin{aligned} x(t) &= 5e^{2t} - 3e^{-7t}, \\ y(t) &= -e^{2t} + 6e^{-7t}. \end{aligned}$$

#### 4- §. O'zgarmas koefitsiyentli chiziqli bir jinsli bo'Imagan differensial tenglamalar sistemasini integrallash usullari

**1. O'zgarmaslarni variatsiyalash usuli.** Ushbu sistema berilgan bo'lsin:

$$\begin{aligned} x' + a_1x + b_1y + c_1z &= f_1(t), & (1) \\ y' + a_2x + b_2y + c_2z &= f_2(t), & (2) \\ z' + a_3x + b_3y + c_3z &= f_3(t). & (3) \end{aligned} \quad (3.41)$$

Bunda  $f_i(t)$  ( $i=1, 2, 3$ ) o'zgaruvchining berilgan uzliksiz funksiyasi.  
Faraż qilaylik:

$$\begin{cases} x = C_1x_1 + C_2x_2 + C_3x_3, \\ y = C_1y_1 + C_2y_2 + C_3y_3, \\ z = C_1z_1 + C_2z_2 + C_3z_3 \end{cases} \quad (3.42)$$

funksiyalar (3.41) sistemaga mos bir jinsli sistemaning umumiy yechimi bo'lsin. U holda (3.41) sistemaning yechimini

$$\begin{aligned} x &= C_1(t)x_1 + C_2(t)x_2 + C_3(t)x_3, \\ y &= C_1(t)y_1 + C_2(t)y_2 + C_3(t)y_3, \\ z &= C_1(t)z_1 + C_2(t)z_2 + C_3(t)z_3 \end{aligned} \quad (3.43)$$

ko'rinishda izlaymiz, bu yerda  $C_1(t)$ ,  $C_2(t)$ ,  $C_3(t)$  – noma'lum funksiyalar.

(3.43) ifodalarni (3.41) sistemaning (1) tenglamasi quyidagi ko'rinishga keladi:

$$\begin{aligned} C'_1x_1 + C'_2x_2 + C'_3x_3 + C_1(x'_1 + a_1x_1 + b_1y_1 + c_1z_1) + \\ + C_2(x'_2 + a_2x_2 + b_2y_2 + c_2z_2) + C_3(x'_3 + a_3x_3 + b_3y_3 + c_3z_3) = f_1(t). \end{aligned} \quad (3.44)$$

Bunda (3.42) ga asosan barcha qavslar nolga teng, demak,

$$C'_1x_1 + C'_2x_2 + C'_3x_3 = f_1(t). \quad (3.45)$$

Xuddi shuningdek, (3.41) sistemaning (2) va (3) tenglamalaridan

$$\begin{cases} C'_1y_1 + C'_2y_2 + C'_3y_3 = f_2(t) \\ C'_1z_1 + C'_2z_2 + C'_3z_3 = f_3(t) \end{cases} \quad (3.46)$$

tenglamalar sistemasi ni hosil qilamiz.

$C'_1$ ,  $C'_2$ ,  $C'_3$  larga nisbatan chiziqli bo'lgan (3.45), (3.46) sistema yechimiga ega, chun ki uning determinanti Vronskiy determinanti bo'lib, u noldan farqli, ya'ni:

$$\Delta = \begin{vmatrix} x_1 & x_2 & x_3 \\ y_1 & y_2 & y_3 \\ z_1 & z_2 & z_3 \end{vmatrix} \neq 0.$$

(3.45), (3.46) sistemadan  $C'_1$ ,  $C'_2$ ,  $C'_3$  larni topib, so'ng integrallab,  $C_1$ ,  $C_2$ ,  $C_3$  larni topamiz, shu bilan birga (3.41) sistemaning (3.43) yechimini topamiz.

**1- misol.** Ushbu sistemani umumiy yechimini toping:

$$\begin{cases} \frac{dx}{dt} + 2x + 4y = 1 + 4t, \\ \frac{dy}{dt} + x - y = \frac{3}{2}t^2. \end{cases} \quad (3.47)$$

**Yechish.** Avvalo

$$\begin{cases} \frac{dx}{dt} + 2x + 4y = 0, \\ \frac{dy}{dt} + x - y = 0 \end{cases} \quad (3.48)$$

sistemaning umumiy yechimini topamiz. (3.48) sistemaning ikkinchi tenglarnasini

$$x = y - \frac{dy}{dt} \quad (3.49)$$

ko'rinishda yozib, uni  $t$  bo'yicha differensiallab,

$$\frac{dx}{dt} = \frac{dy}{dt} - \frac{d^2y}{dt^2} \quad (3.50)$$

tenglikni hosil qilamiz. (3.49) va (3.50) ifodalarni (3.48) sistemaning birinchi tenglarnasiga keltirib qo'yib,  $y$  ga nisbatan ikkinchi tartibli tenglarnaga kelamiz:

$$\frac{d^2y}{dt^2} + \frac{dy}{dt} - 6y = 0.$$

Bu tenglamaning umumiy yechimi:

$$y = C_1 e^{2t} + C_2 e^{-3t}.$$

(3.49) dan

$$x = -C_1 e^{2t} + 4C_2 e^{-3t}$$

ni topamiz. Demak, (3.48) sistemaning umumiy yechimi:

$$\begin{aligned} x &= -C_1 e^{2t} + 4C_2 e^{-3t}, \\ y &= C_1 e^{2t} + C_2 e^{-3t}. \end{aligned}$$

Endi (3.47) sistemaning yechimini

$$\begin{cases} x = -C_1(t) e^{2t} + 4C_2(t) e^{-3t}, \\ y = C_1(t) e^{2t} + C_2(t) e^{-3t} \end{cases} \quad (3.51)$$

ko'rinishda izlaymiz.

(3.51) ni (3.47) ga keltirib qo'yib va ba'zi bir elementar amallar ni bajarib,  $C_1'(t), C_2'(t)$  larga nisbatan

$$\begin{cases} -C_1'(t) e^{2t} + 4C_2'(t) e^{-3t} = 1 + 4t, \\ C_1'(t) e^{2t} + C_2'(t) e^{-3t} = \frac{3}{2} t^2 \end{cases}$$

chiziqli tenglamalar sistemasiiga kelamiz. Bu ndan

$$C_1(t) = \frac{(6t^2 - 4t - 1)e^{-2t}}{5}, \quad C_2(t) = \frac{(3t^2 + 8t + 2)e^{3t}}{10}$$

larni topib, so'ngra integrallab,

$$C_1(t) = -\frac{1}{5}(t + 3t^2)e^{-2t} + C_3, \quad C_2(t) = \frac{1}{10}(2t + t^2)e^{3t} + C_4 \quad (3.52)$$

ni topamiz, bu yerda  $C_3$  va  $C_4$  — ixtiyoriy o'zgarmaslar. (3.52) ni (3.51) ga keltirib qo'yib, (3.47) sistemaning umumi yechimini hosil qilamiz:

$$\begin{aligned} x(t) &= -C_1 e^{2t} + 4C_2 e^{-3t} + t + t^2, \\ y(t) &= C_1 e^{2t} + C_2 e^{-3t} - \frac{1}{2}t^2. \end{aligned} \quad (3.53)$$

**2. Aniqmas koeffitsiyentlar usuli.** Agar o'zgarmas koeffitsiyentli chiziqli bir jinsli boshmagan differensial tenglamalar sistemasining o'ng tomonidagi ifoda  $f(t)$  — funksiya,  $P_k(t)$  — ko'phad,  $e^{\alpha t}$  — ko'rsatkichli funksiya,  $\sin \beta t$ ,  $\cos \beta t$  — sinus va kosinus yoki ularning ko'paytmasi ko'rini shida bo'lsa, sistemaning xususiy yechimini aniqmas koeffitsiyentlar usuli bilan topish maqsadga muvofiqdir.

## 2-misol. Ushbu

$$\begin{cases} \frac{dx}{dt} = x + 2y, \\ \frac{dy}{dt} = x - 5\sin t \end{cases} \quad (3.54)$$

sistemaning umumi yechimini toping.

Yechish. (3.54) sistemaga mos bo'lган bir jinsli sistema:

$$\begin{cases} \frac{dx}{dt} = x + 2y, \\ \frac{dy}{dt} = x. \end{cases} \quad (3.55)$$

Birinchi tenglarningi t bo'yicha differensiallaymiz:

$$\frac{d^2x}{dt^2} = \frac{dx}{dt} + 2 \frac{dy}{dt}.$$

Bundan

$$\frac{d^2x}{dt^2} - \frac{dx}{dt} - 2x = 0 \quad (3.56)$$

tenglamani hosil qilamiz. Bu tenglama  $\frac{d^2x}{dt^2} - \frac{dx}{dt} - 2x = 10 \sin t$  tenglamaga mos bir jinsli tenglama. (3.56) ning  $k^2 - k - 2 = 0$  xarakteristik tenglamasi  $k_1 = -1$ ,  $k_2 = 2$  ildizlarga ega.

Mos bir jinsli tenglamaning umumiy yechimi

$$\bar{x} = C_1 e^{-t} + C_2 e^{2t} \quad (3.57)$$

bo'ladi. Bir jinsli bo'limgan tenglamaning o'ng tomoni  $f(t) = 10 \sin t$  ko'rinishiga ega. Bunda  $\alpha = 0$ ,  $\beta = 1$ , shuning uchun xususiy yechimni

$$x^* = A \cos t + B \sin t \quad (3.58)$$

ko'rinishda izlaysiz. Bundan  $x^*$ ,  $x''$  larni topamiz:

$$\begin{aligned} x^* &= -A \sin t + B \cos t, \\ x'' &= -A \cos t - B \sin t. \end{aligned} \quad (3.59)$$

(3.58) va (3.59) larni differentsiyal tenglamaga qo'yib, quyidagiغا ega bo'lamiiz:

$$(3A + B) \cos t + (A + B) \sin t = 10 \sin t.$$

$\cos t$  va  $\sin t$  larning koefitsiyentlarini tenglashtirib,

$$\begin{cases} 3A + B = 0, \\ A + B = 10 \end{cases}$$

sistemanı hosil qilamiz. Sistemanı yechib

$$A = -5, \quad B = 15$$

larni topamiz. Demak, xususiy yechim

$$x^* = -5 \cos t + 10 \sin t$$

ko'rinishda, umumiy yechim esa

$$x = \bar{x} + x^* = C_1 e^{-t} + C_2 e^{2t} - 5 \cos t + 10 \sin t \quad (3.60)$$

ko'rinishda bo'ladi. (3.60) ni t bo'yicha differentsiyal lab

$$x' = -C_1 e^{-t} + 2C_2 e^{2t} + 5 \sin t + 10 \cos t \quad (3.61)$$

ni topamiz. (3.60) va (3.61) larni (3.54) sistemaning birinchi tenglamasiga keltirib qo'yamiz.

U holda

$$y = -C_1 e^{-t} + \frac{1}{2} C_2 e^{2t} + \frac{15}{2} \cos t - \frac{5}{2} \sin t$$

ni topamiz. Demak, (3.54) sistemaning umumiy yechimi

$$x = C_1 e^{-t} + C_2 e^{2t} - 5 \cos t + 10 \sin t,$$

$$y = -C_1 e^{-t} + \frac{1}{2} C_2 e^{2t} + \frac{15}{2} \cos t - \frac{5}{2} \sin t$$

ko'rinishda bo'ladи.

### 3. Birinchi integrallarini topish usuli (Dalamber usuli).

Ushbu

$$\begin{cases} \frac{dx}{dt} = a_1 x + b_1 y + f_1(t), \\ \frac{dy}{dt} = a_2 x + b_2 y + f_2(t) \end{cases} \quad (3.62)$$

sistemani qaraymiz. Ikkinchi tenglarni biror  $\lambda$  songa ko'paytirib, birinchitenglamaga hadima-had qo'shamiz:

$$\frac{d(x+\lambda y)}{dt} = (a_1 + \lambda a_2)x + (b_1 + \lambda b_2)y + f_1(t) + \lambda f_2(t). \quad (3.63)$$

(3.63) tenglamani quyidagi ko'rinishda yozib olamiz:

$$\frac{d(x+\lambda y)}{dt} = (a_1 + \lambda a_2) \left( x + \frac{b_1 + \lambda b_2}{a_1 + \lambda a_2} y \right) + f_1(t) + \lambda f_2(t). \quad (3.64)$$

Endi  $\lambda$  sonni shunday tanlaymizki, u

$$\frac{b_1 + \lambda b_2}{a_1 + \lambda a_2} = \lambda \quad (3.65)$$

bo'lsin. U holda (3.64) tenglama  $(x + \lambda y)$  ga nisbatan chiziqli tenglama ko'rinishiga keladi:

$$\frac{d(x+\lambda y)}{dt} = (a_1 + \lambda a_2)(x + \lambda y) + f_1(t) + \lambda f_2(t). \quad (3.66)$$

(3.66) ni integrallab

$$x + \lambda y = e^{(\alpha_1 + \lambda \alpha_2)t} \left[ C + \int [f_1(t) + \lambda f_2(t)] e^{-(\alpha_1 + \alpha_2 \lambda)t} dt \right] \quad (3.67)$$

ni topamiz.

Agar (3.65) tenglama ikkita haqiqiy har xil  $\lambda_1 \neq \lambda_2$  ildizga ega bo'lsa, u holda (3.67) dan (3.62) sistemaning ikkita birinchi integrallari topiladi. Demak, sistemani integrallash tugallangan bo'ladi.

**3- misol.** Ushbu sistemani Dalamber usuli bilan yeching:

$$\begin{cases} \frac{dx}{dt} = 5x + 4y + e^t, \\ \frac{dy}{dx} = 4x + 5y + 1. \end{cases}$$

**Yechish.** Bu yerda  $a_1 = 5$ ,  $b_1 = 4$ ,  $a_2 = 4$ ,  $b_2 = 5$ ,  $f_1(t) = e^t$ ,  $f_2(t) = 1$ .  $\lambda$  sonni (3.65) formuladan topamiz:

$$\frac{4+5\lambda}{5+4\lambda} = \lambda \Rightarrow 4 + 5\lambda = \lambda(5 + 4\lambda). \quad (3.67')$$

**Bu** tenglama  $\lambda_1 = -1$ ,  $\lambda_2 = 1$  ildizlarga ega. U holda (3.67') formuladan  $\lambda = 1$  uchun

$$x + y = e^{9t} (C_1 + \int (e^{-8t} + e^{-9t}) dt) = C_1 e^{9t} - \frac{1}{8} e^t - \frac{1}{9};$$

$\lambda = -1$  uchun

$$x - y = e^t (C_2 + \int (1 - e^{-t}) dt) = C_2 e^t + t e^t + 1$$

larni topamiz. Shunday qilib, berilgan sistemaning bog'liqmas ikkitagi birinchi integrali

$$(x + y + \frac{1}{8} e^t + \frac{1}{9}) e^{-9t} = C_1,$$

$$(x - y - t e^t - 1) e^{-t} = C_2$$

ko'rinishda bo'ladi.

Quyidagi differensial tenglamalar sistemasining yechimini bitta tenglamaga keltirish usuli bilan toping:

$$269. \begin{cases} \frac{dx}{dt} = -9y, \\ \frac{dy}{dt} = x. \end{cases}$$

$$274. \begin{cases} \frac{dx}{dt} = x + 5y, \\ \frac{dy}{dt} = -x - 3y, \end{cases}$$

$$x(0) = -2, \quad y(0) = 1.$$

$$270. \begin{cases} \frac{dx}{dt} = y + t, \\ \frac{dy}{dt} = x - t. \end{cases}$$

$$275. \begin{cases} \frac{d^2x}{dt^2} = x^2 + y, \\ \frac{dy}{dt} = -2\frac{dx}{dt} + x, \end{cases}$$

$$x(0) = x'(0) = 1, \quad y(0) = 0.$$

$$271. \begin{cases} \frac{dx}{dt} = 3 - 2y, \\ \frac{dy}{dt} = 2x - 2t. \end{cases}$$

$$276. \begin{cases} \frac{d^2x}{dt^2} + \frac{dy}{dt} + x = 0, \\ \frac{dx}{dt} + \frac{d^2y}{dt^2} = 0. \end{cases}$$

$$272. \begin{cases} \frac{dx}{dt} + 3x + y = 0, \\ \frac{dy}{dt} - x + y = 0. \end{cases}$$

$$277. \begin{cases} \frac{dx}{dt} = x - 4y, \\ \frac{dy}{dt} = x + y. \end{cases}$$

$$273. \begin{cases} \frac{dx}{dt} = 3x - \frac{1}{2}y - 3t^2 - \frac{1}{2}t + \frac{3}{2}, \\ \frac{dy}{dt} = 2y - 2t - 1. \end{cases}$$

$$278. \begin{cases} 4\frac{dx}{dt} - \frac{dy}{dt} + 3x = \sin t, \\ \frac{dx}{dt} + y = \cos t. \end{cases}$$

Quyidagi differensial tenglamalar sistemasining yechimini sistemaning birinchi integrallarini topish usuli bilan toping:

$$279. \begin{cases} \frac{dx}{dt} = x^2 + y^2, \\ \frac{dy}{dt} = 2xy. \end{cases}$$

$$280. \begin{cases} \frac{dx}{dt} = \frac{y}{x-y}, \\ \frac{dy}{dt} = \frac{x}{x-y}. \end{cases}$$

281.  $\begin{cases} \frac{dx}{dt} = \sin x \cos y, \\ \frac{dy}{dt} = \cos x \sin y. \end{cases}$

282.  $\begin{cases} \frac{dx}{dt} = -y, \\ \frac{dy}{dt} = \frac{y^2 - t}{x}. \end{cases} \quad z = t^2 + 2xy, \quad z = x - ty^2$  funksiyalar sistemaning

birinchi integrali bo'la oladimi?

283.  $\begin{cases} \frac{dx}{dt} = y^2 - \cos x, \\ \frac{dy}{dt} = -y \sin x. \end{cases} \quad z = 2t \cos x - \ln y, \quad z = 3y \cos x - y^3$  funksiyalar sisteme-

maning birinchi integrali bo'la oladimi?

284.  $\begin{cases} \frac{dx}{dt} = \cos^2 x \cos^2 y + \sin^2 x \cos^2 y, \\ \frac{dy}{dt} = -\frac{1}{2} \sin 2x \sin 2y, \quad x(0) = 0, \quad y(0) = 0. \end{cases}$

Quyidagi differensial tenglamalar sistemasining yechimini Eyler usuli bilan toping:

285.  $\begin{cases} \frac{dx}{dt} = 8y - x, \\ \frac{dy}{dt} = x + y. \end{cases}$

288.  $\begin{cases} \frac{dx}{dt} = 4x - 3y, \\ \frac{dy}{dt} = 3x + 4y. \end{cases}$

286.  $\begin{cases} \frac{dx}{dt} = 2x + y, \\ \frac{dy}{dt} = x - 3y. \end{cases}$   
 $x(0) = 0, \quad y(0) = 0.$

289.  $\begin{cases} \frac{dx}{dt} = 5x - y, \\ \frac{dy}{dt} = x + 3y. \end{cases}$

287.  $\begin{cases} \frac{dx}{dt} = x + y, \\ \frac{dy}{dt} = 4y - 2x, \end{cases}$   
 $x(0) = 0, \quad y(0) = -1.$

290.  $\begin{cases} \frac{dx}{dt} = x + 5y, \\ \frac{dy}{dt} = -3y - x, \end{cases}$   
 $x(0) = -2, \quad y(0) = 1.$

291. 
$$\begin{cases} \frac{dx}{dt} + 2\frac{dy}{dt} = 17x + 8y, \\ 13\frac{dx}{dt} = 53x + 2y, \\ x(0) = 2, \quad y(0) = -1. \end{cases}$$

292. 
$$\begin{cases} \frac{dx}{dt} = 6x - 12y - z, \\ \frac{dy}{dt} = x - 3y - z, \\ \frac{dz}{dt} = -4x + 12y + 3z. \end{cases}$$

Quyidagi differensial tenglamalar sistemasining yechimini o'zgarmaslarini variatsiyalash usuli bilan toping:

294. 
$$\begin{cases} \frac{dx}{dt} + 2x - y = -e^{2t}, \\ \frac{dy}{dt} + 3x - 2y = 6e^{2t}. \end{cases}$$

295. 
$$\begin{cases} \frac{dx}{dt} = x + y - \cos t, \\ \frac{dy}{dt} = -y - 2x + \cos t + \sin t. \end{cases}$$

296. 
$$\begin{cases} \frac{dx}{dt} - y = \cos t, \\ \frac{dy}{dt} = 1 - x. \end{cases}$$

293. 
$$\begin{cases} \frac{dx}{dt} = x - z, \\ \frac{dy}{dt} = x, \\ \frac{dz}{dt} = x - y. \end{cases}$$

297. 
$$\begin{cases} \frac{dx}{dt} + y = \cos t, \\ \frac{dy}{dt} + x = \sin t. \end{cases}$$

298. 
$$\begin{cases} \frac{dx}{dt} = 2x - y, \\ \frac{dy}{dt} = 2y - x - 5e^t \sin t. \end{cases}$$

299. 
$$\begin{cases} \frac{dx}{dt} = 2x + y - 2z - t + 2, \\ \frac{dy}{dt} = -x + t, \\ \frac{dz}{dt} = x + y - z - t + 1. \end{cases}$$

Quyidagi differensial tenglamalar sistemasining yechimini aniqmas koefitsiyentlar usulida toping:

300. 
$$\begin{cases} \frac{dx}{dt} = 3 - 2y, \\ \frac{dy}{dt} = 2x - 2t. \end{cases}$$

301. 
$$\begin{cases} \frac{dx}{dt} = -y + \sin t, \\ \frac{dy}{dt} = x + \cos t. \end{cases}$$

302. 
$$\begin{cases} \frac{dx}{dt} = 4x - 5y + 4t - 1, \\ \frac{dy}{dt} = x - 2y + t, \\ x(0) = 0, \quad y(0) = 0. \end{cases}$$

304. 
$$\begin{cases} \frac{dx}{dt} = x + y + t, \\ \frac{dy}{dt} = x - 2y + 2t, \\ x(0) = -\frac{7}{9}, \quad y(0) = -\frac{5}{9}. \end{cases}$$

303. 
$$\begin{cases} \frac{dx}{dt} + \frac{dy}{dt} + y = e^{-t}, \\ 2 \frac{dx}{dt} + \frac{dy}{dt} + 2y = \sin t. \end{cases}$$

305. 
$$\begin{cases} \frac{dx}{dt} = x \cos t, \\ 2 \frac{dy}{dt} = (e^t + e^{-t})y. \end{cases}$$

**Quyidagi differensial tenglamalar sistemasining yechimini Dalambler usulida toping:**

306. 
$$\begin{cases} \frac{dx}{dt} = 5x + 4y, \\ \frac{dy}{dt} = x + 2y. \end{cases}$$

309. 
$$\begin{cases} \frac{dx}{dt} = 2x + 4y + \cos t, \\ \frac{dy}{dt} = x - 2y + \sin t. \end{cases}$$

307. 
$$\begin{cases} \frac{dx}{dt} = 6x + y, \\ \frac{dy}{dt} = 4x + 3y. \end{cases}$$

310. 
$$\begin{cases} \frac{dx}{dt} = 3x + y + e^t, \\ \frac{dy}{dt} = x + 3y - e^t. \end{cases}$$

308. 
$$\begin{cases} \frac{dx}{dt} = 2x - 4y + 1, \\ \frac{dy}{dt} = -x + 5y. \end{cases}$$

311. 
$$\begin{cases} \frac{dx}{dt} = x + 5y, \\ \frac{dy}{dt} = -3y - x, \\ x(0) = -2, \quad y(0) = 1. \end{cases}$$

### Mustaqil ish topshiriqlari

312. 
$$\begin{cases} \frac{dy}{dt} = y + z, \\ \frac{dz}{dt} = y + z + t. \end{cases}$$

313. 
$$\begin{cases} \frac{dy}{dt} = \frac{y^2}{z}, \\ \frac{dz}{dt} = \frac{1}{2}y. \end{cases}$$

$$314. \begin{cases} \frac{dy}{dt} = 1 - \frac{1}{z}, \\ \frac{dz}{dt} = \frac{1}{y-t}. \end{cases}$$

$$315. \begin{cases} \frac{dy}{dt} = \frac{z^2}{y}, \\ \frac{dz}{dt} = \frac{y^2}{z}. \end{cases}$$

$$316. \begin{cases} \frac{dy}{dx} = \frac{x}{yz}, \\ \frac{dz}{dx} = \frac{x}{y^2}. \end{cases}$$

$$317. \begin{cases} \frac{dy}{dt} = -7x + y, \\ \frac{dz}{dt} = -2x - 5y. \end{cases}$$

$$318. \begin{cases} \frac{dy}{dt} = x - y, \\ \frac{dz}{dt} = x + 3y. \end{cases}$$

$$319. \begin{cases} \frac{dx}{dt} = -y + z, \\ \frac{dy}{dt} = z + x, \\ \frac{dz}{dt} = x + y. \end{cases}$$

$$320. \begin{cases} \frac{dx}{dt} = -x + y + z + e^t, \\ \frac{dy}{dt} = x - y + z + e^{3t}, \\ \frac{dz}{dt} = x + y + z + 4. \end{cases}$$

## 5- §. Operatsion hisob

### 1. Boshlang'ich funksiya va uning tasviri.

Boshlang'ich funksiya (original) deb quyidagi shartlarni qanoat-lanti nuchchi  $f(t)$  funksiya qabul qilinadi:

1°. Istalgan chekli intervalda  $f(t)$  va  $f'(t)$  chekli sonda n ko'p bo'limgagan birinchi tur uzhilish n uqtala riga (chekli sakrashlarg'a) ega.

2°.  $t < 0$  uchun  $f(t)=0$ .

3°.  $f(t)$  funksiya ko'rsatkichli funksiyadan tez o'smaydi, ya'ni shunday  $t$  ga bog'liq bo'limgagan musbat haqiqiy o'zgarmas  $M$  va  $S_0$  sonlari mavjudki, bunda yetarlicha katta  $t$  lar uchun

$$|f(t)| \leq M e^{s_0 t} \quad (3.68)$$

tengsizlik bajariladi. Bunda  $S_0$  — originalning o'sish tartibini ko'r-satuvchi son. Original o'zgarmas bo'lsa,  $S_0=0$  deb qabul qilish mumkin.

$f(t)$  funksiyaning haqiqiy o'zgaruvchi  $t$  ning kompleks funksiyasi  $e^{-pt}$  ga ko'paytmasini, ya'ni

$$e^{-pt} \cdot f(t) \quad (p = a + ib, a > 0) \quad (3.69)$$

ni qaraymiz. (3.69) funksiya ham haqiqiy o'zgaruvchi  $t$  ning kompleks funksiyasidir:

$$e^{-pt} \cdot f(t) = e^{-at} f(t) \cos bt - ie^{-at} f(t) \sin bt. \quad (3.70)$$

So'ngra ushbu xosmas integralni qaraymiz:

$$\int_0^{\infty} e^{-pt} f(t) dt = \int_0^{\infty} e^{-at} f(t) \cos bt dt - i \int_0^{\infty} e^{-at} f(t) \sin bt dt. \quad (3.71)$$

Agar  $f(t)$  funksiya (3.68) tengsizlikni qanoatlantirsa va  $a > S_0$  bolsa, (3.71) tenglikning o'ng qismida turgan xosmas integrallar mavjud va ular absolyut yaqinlashuvchi.

(3.71) integral  $p$  ning biron ta funksiyasini aniqlaydi, u funksiya  $F(p)$  ni bilan belgilaymiz:

$$F(p) = \int_0^{\infty} e^{-pt} f(t) dt. \quad (3.72)$$

**Ta'rif.** Kompleks  $p=a+ib$  o'zgaruvchiga bog'liq bo'lgan

$$F(p) = \int_0^{\infty} e^{-pt} f(t) dt = L\{f(t)\}$$

tenglik bilan aniqlangan  $F(p)$  funksiyaga  $f(t)$  funksiyaning tasviri yoki *Laplas almashtirishi* deyiladi,  $f(t)$  funksiyaning o'zi esa  $F(p)$  *oring originali* deyiladi va quyidagicha yoziladi:

$F(p) \longrightarrow f(t)$  tasvir-original yoki  $f(t) \longrightarrow F(p)$  original-tasvir, yoki

$$L\{f(t)\} = F(p).$$

## 2. Laplas almashtirishining asosiy xossalari

Ixtiyorli  $\alpha$  va  $\beta$  kompleks o'zgarmaslar uchun

$$\alpha f(t) + \beta g(t) \longleftarrow \alpha F(p) + \beta G(p). \quad (3.73)$$

### Asosiy originallar va tasvirlar jadvali

Nº	$f(t)$ original	$F(p)$ tasvir
1.	1	$\frac{1}{p}$
2.	$t^n$	$\frac{n!}{p^{n+1}}$
3.	$e^{\alpha t}$	$\frac{1}{p - \alpha}$
4.	$\sin at$	$\frac{a}{p^2 + a^2}$
5.	$\cos at$	$\frac{p}{p^2 + a^2}$
6.	$\operatorname{sh} at$	$\frac{a}{p^2 - a^2}$
7.	$\operatorname{ch} at$	$\frac{p}{p^2 - a^2}$
8.	$e^{\alpha t} \cos at$	$\frac{p - \alpha}{(p - \alpha)^2 + a^2}$

Nº	$f(t)$ original	$F(p)$ tasvir
9.	$e^{\alpha t} \sin at$	$\frac{\alpha}{(p - \alpha)^2 + a^2}$
10.	$t^n e^{\alpha t}$	$\frac{n!}{(p - \alpha)^{n+1}}$
11.	$t \cos at$	$\frac{p^2 - a^2}{(p^2 + a^2)^2}$
12.	$t \sin at$	$\frac{2pa}{(p^2 + a^2)^2}$
13.	$\sin(t - \alpha)$	$e^{-\alpha p} \frac{1}{p^2 + 1}$
14.	$\cos(t - \alpha)$	$e^{-\alpha p} \frac{p}{p^2 + 1}$
15.	$\frac{\sin t}{t}$	$\operatorname{arcctg} p$
16.	$\int_0^t \frac{\sin t}{t} dt$	$\frac{\operatorname{arcctg} p}{p}$

2°. Ixtiyoriy o'zgarimmas  $\alpha > 0$  uchun

$$f(at) \leftarrow \frac{1}{a} F\left(\frac{p}{a}\right). \quad (3.74)$$

3°. Agar  $f(t) \leftarrow F(p)$  bo'lib,  $f'(t)$  original bo'lsa, u holda

$$f'(t) \leftarrow pF(p) - f(0). \quad (3.75)$$

4°. Agar  $f(t) \leftarrow F(p)$  bo'lsa, u holda istalgan  $\alpha$  da

$$e^{\alpha t} f(t) \leftarrow F(p - \alpha). \quad (3.76)$$

5°. Agar  $f(t) \leftarrow F(p)$  bo'lsa, u holda  $\tau > 0$  bo'lganda

$$f(t - \tau) \leftarrow e^{-p\tau} F(p). \quad (3.77)$$

6°. Agar  $f(t) \leftarrow F(p)$  bo'lsa, u holda

$$\int_0^t f(t) dt \leftarrow \frac{F(p)}{p}. \quad (3.78)$$

7°. Agar  $f(t, x) \leftarrow F(p, x)$  bo'lsa, u holda

$$\frac{\partial f(t, x)}{\partial x} \leftarrow \frac{\partial F(p, x)}{\partial x}. \quad (3.79)$$

8. Agar  $f(t) \leftarrow F(p)$  bo'lsa, u holda

$$-tf(t) \leftarrow F'(p). \quad (3.80)$$

9°. Agar  $\int_0^\infty F(z) dz$  integral yaqinlashuvchi va  $f(t) \leftarrow F(p)$  bo'lsa, u holda

$$\frac{f(t)}{t} \leftarrow \frac{1}{p} \int_0^\infty F(z) dz. \quad (3.81)$$

### 3. Funksiyaning tasvirini topishga doir misollar.

Asosiy xossalardan va tasvirlar jadvalidan foydalanib, haqiqiy o'zgaruvchining bir qator elementar funksiyalarining tasvirini topamiz.

Ba'zi funksiyalarning tasvirini topishda to'g'ridan-to'g'ri jadvaldan foydalanib bo'lmaydi. Bunday hollarda shakl almashtirishlar yordamida funksiya ko'rinishini jadvalga moslab olamiz.

**1- misol.**  $f(t) = a^t$  funksiyaning tasvirini toping.

Yechish. Logarifmning asosiy ayniyatidan:

$$a^t = e^{t \ln a} = e^{t \ln a}.$$

U holda (3) formuladan

$$e^{t \ln a} \leftarrow \frac{1}{p - \ln a}$$

ifodani topamiz. Demak,  $a^t$  funksiyaning tasviri  $F(p) = \frac{1}{p - \ln a}$ , ya'ni

$$a^t \leftarrow \frac{1}{p - \ln a}.$$

**2- misol.**  $f(t) = t \cdot \cos at$  orignalning tasvirini toping.

Yechish.  $8^\circ$  ga asosan

$$t \cdot \cos at \leftarrow -\left( \frac{p}{p^2 + a^2} \right)' = -\frac{a^2 - p^2}{(a^2 + p^2)^2} = \frac{p^2 - a^2}{(a^2 + p^2)^2}.$$

$$\text{Demak, } L\{t \cos at\} = \frac{p^2 - a^2}{(p^2 + a^2)^2}.$$

**3- misol.**  $t^n e^{\alpha t}$  originalning tasviriini toping.

Yechish.  $e^{\alpha t} \leftarrow \frac{1}{p - \alpha}$  moslikning ikkala tomonini  $\alpha$  parametri bo'yicha  $n$  marta differensiallab, quyidagilarni hosil qilamiz:

$$te^{\alpha t} \leftarrow \frac{1!}{(p - \alpha)^2}; \quad t^2 e^{\alpha t} \leftarrow \frac{2!}{(p - \alpha)^3};$$

$$t^3 e^{\alpha t} \leftarrow \frac{3!}{(p - \alpha)^4}; \quad \dots; \quad t^n e^{\alpha t} \leftarrow \frac{n!}{(p - \alpha)^{n+1}}.$$

$$\text{Demak, } L\{t^n e^{\alpha t}\} = \frac{n!}{(p - \alpha)^{n+1}}.$$

**4- misol.**  $f(t) = (t - 1)^2 e^{t-1}$  funksiyaning tasvirini toping.

Yechish.  $t - 1 = z$  deb, funksiyani  $z^2 e^z$  ko'rinishga keltiramiz. Endi jadvalning 10- formulasiidan

$$z^2 e^z \leftarrow \frac{2}{(p - 1)^3}$$

ni topamiz. U holda  $5^\circ$ -xossaliga asosan

$$(t - 1)^2 e^{t-1} \leftarrow \frac{2}{(p + 1)^3}$$

ga egamiz.

#### 4. Originalni tasviri bo'yicha topish usullari

Operatsion hisobda originalni ma'lum tasviri bo'yicha izlash uchun *yoyish teoremlari* deb ataladigan teoremlardan hamda tasvirlar jadvalidan foydalaniлади.

**Yoyish teoremasi.** Agar izlanayotgan  $f(t)$  funksiyaning  $F(p)$  tasvirini  $\frac{1}{p}$  ning darajalari bo'yicha darajali qatorga yoyish mumkin bo'lsa, ya'ni

$$F(p) = \frac{a_0}{p} + \frac{a_1}{p^2} + \frac{a_2}{p^3} + \dots + \frac{a_n}{p^{n+1}} + \dots \quad (3.82)$$

bo'lib, u  $\frac{1}{|p|} < R$  da  $F(p)$  ga yaqinlashsa, u holda original quyidagi formula bo'yicha topiladi:

$$f(t) = \sum_{n=0}^{\infty} a_n \frac{t^n}{n!}. \quad (3.83)$$

Bu qator  $t > 0$  qiymatlar uchun yaqinlashadi va  $t < 0$  da  $f(t)=0$  deb olinadi.

Endi  $F(p)$  funksiya  $p$  ning kasr ratsional funksiyasi, ya'ni

$$F(p) = \frac{A(p)}{B(p)} \quad (3.84)$$

bo'lsin, bu yerda  $A(p)$  va  $B(p)$  – mos ravishda  $m$  va  $n$  darajali ( $m < n$ ) ko'phadlar. U holda  $F(p)$  ga mos originallar quyidagicha topiladi.

Agar  $B(p)$  maxrajning barcha ildizlari ma'lum bo'lsa, u holda uni eng sodda ko'paytuvchilarga yoyish mumkin:

$$B(p) = (p - p_1)^{k_1} (p - p_2)^{k_2} \dots (p - p_r)^{k_r}, \quad (3.85)$$

bu yerda  $k_1+k_2+\dots+k_r=n$  Ma'lumki, bu holda  $F(p)$  funksiyani eng sodda kasrlar yig'indisiga yoyish mumkin:

$$F(p) = \sum_{j=1}^r \sum_{s=1}^{k_j} \frac{A_{js}}{(p - p_j)^{k_j-s+1}}. \quad (3.86)$$

Bu yoyilmaning barcha koeffitsiyentlarini

$$A_{js} = \frac{1}{(s-1)!} \lim_{p \rightarrow p_j} \frac{d^{s-1}}{dp^{s-1}} [(\mathbf{p} - \mathbf{p}_j)^{k_j} \cdot F(p)] \quad (3.87)$$

formula bo'yicha aniqlash mumkin.

$A_{js}$  koeffitsiyentlarni aniqlash uchun (3.87) formulaning o'rniga integral hisobda ratsional kasrlarni integrallashda qo'llaniladigan elementar usullarda foydalanish mumkin. Xususan, bu usulni qo'llash  $B(p)$  maxrajning barcha ildizlari tub, ya'ni sodda va juft-jufti bilan qoshma bo'lqanda maqsadga muvofiqdir.

Agar  $B(p)$  ning barcha ildizlari sodda, ya'ni

$$B(p) = (p - p_1)(p - p_2)(p - p_3) \dots (p - p_n),$$

bu yerda  $j \neq k$ ,  $p_j \neq p_k$  bo'lsa, yoyilma soddalashadi:

$$F(p) = \sum_{j=1}^n \frac{A_j}{p - p_j}, \text{ bu yerda } A_j = \frac{A(p_j)}{B(p_j)}. \quad (3.88)$$

$F(p)$  ning u yoki bu usul bilan sodda kasrlarga yoyilmasini tuzishda  $f(p)$  original quyidagi formulalar bo'yicha izlanadi:

a)  $B(p)$  maxrajning ildizlari sodda bo'lgan holda:

$$f(t) = \sum_{j=1}^n \frac{A(p_j)}{B'(p_j)} e^{p_j t}. \quad (3.89)$$

b)  $B(p)$  maxrajning ildizlari karrali bo'lgani holda:

$$f(t) = \sum_{j=1}^r \sum_{s=1}^{k_j} A_{js} \frac{t^{k_j-s}}{(k_j-s)!} e^{p_j t}. \quad (3.90)$$

## 5. Originalni tasvir bo'yicha topishga misollar

1- misol.  $F(p) = \frac{1}{p} e^{-\frac{1}{p^2}}$  tasvir uchun originalni toping.

Yechish.  $F(p)$  funksiyani  $p(p \neq 0)$  kompleks ozgaruvchining butun tekisligida ushu Loran qatoriga yoyamiz:

$$F(p) = \frac{1}{p} e^{-\frac{1}{p^2}} = \sum_{n=0}^{\infty} \frac{(-1)^n}{n! p^{2n+1}} = \frac{1}{p} - \frac{1}{1!} \cdot \frac{1}{p^3} + \frac{1}{2!} \cdot \frac{1}{p^5} - \frac{1}{3!} \cdot \frac{1}{p^7} + \dots = \\ = \frac{1}{p} \left( 1 - \frac{1}{1! p^2} + \frac{1}{2! p^4} - \frac{1}{3! p^6} + \frac{1}{4! p^8} - \dots \right)$$

Yoyilma birinchi teoremaning shartlarini qanoatlantirganligi sababli bu funksiyaning originali quyidagicha bo'ldi:

$$f(t) = 1 - \frac{t^2}{2!} + \frac{t^4}{2! 4!} - \frac{t^6}{3! 6!} + \frac{t^8}{4! 8!} \dots = \sum_{n=0}^{\infty} \frac{(-1)^n t^{2n}}{n! (2n)!}.$$

Demak,

$$\frac{1}{p} e^{-\frac{1}{p^2}} \xrightarrow{\sim} \sum_{n=0}^{\infty} (-1)^n \frac{t^{2n}}{n! (2n)!}.$$

**2 - misol.**  $F(p) = \frac{p^2 + p + 1}{p(p^4 - 1)}$  tasviming originalini toping.

Yechish. Tasvirning maxraji  $p_1 = 0$ ,  $p_2 = 1$ ,  $p_3 = 1$ ,  $p_4 = i$ ,  $p_5 = -i$  tub ildizlarga ega. Bu holda  $F(p)$  funksiyaning yoyilmasi (3.88) ko'rinishda bo'ldi:

$$F(p) = \frac{A_1}{p} + \frac{A_2}{p-1} + \frac{A_3}{p+1} + \frac{A_4}{p-i} + \frac{A_5}{p+i}.$$

$A_1, A_2, A_3, A_4, A_5$  koeffitsiyentlar

$$A_j = \frac{A(p_j)}{B'(p_j)}$$

formula bilan aniqlanadi, bu yerda  $A(p) = p^2 + p + 1$ ,  $B'(p) = 5p^4 - 1$ .

$$A_1 = \frac{A(0)}{B'(0)} = -1; \quad A_2 = \frac{A(1)}{B'(1)} = \frac{3}{4}; \quad A_3 = \frac{A(-1)}{B'(-1)} = \frac{1}{4};$$

$$A_4 = \frac{A(i)}{B'(i)} = \frac{i}{4}; \quad A_5 = \frac{A(-i)}{B'(-i)} = -\frac{i}{4}.$$

Endi (3.89) formula bo'yicha orjinalni topamiz:

$$\begin{aligned} f(t) &= -1 \cdot e^{0t} + \frac{3}{4}e^{1t} + \frac{1}{4}e^{-1t} + \frac{i}{4}e^{it} - \frac{i}{4}e^{-it} = \\ &= -1 + \frac{1}{4}(3e^t + e^{-t}) - \frac{1}{2} \frac{e^{it} - e^{-it}}{2i} = -1 + \frac{1}{4}(3e^t + e^{-t}) - \frac{1}{2} \sin t. \end{aligned}$$

### Mustaqil ish topshiriqlari

Quyidagi funksiyalarining tasvirlarini toping:

321.  $f(t) = \sin^2 t.$

326.  $f(t) = \operatorname{ch}at \sin bt.$

322.  $f(t) = e^t \cos^2 t.$

327.  $f(t) = e^{-7t} \operatorname{ch}7t.$

323.  $f(t) = \operatorname{sh}at \cos bt.$

328.  $f(t) = \int_0^t \cos^2 \alpha dt.$

324.  $f(t) = \operatorname{ch}at \cos bt.$

329.  $f(t) = \frac{e^t - 1}{t}.$

325.  $f(t) = t \operatorname{sh}bt$

330.  $f(t) = \frac{\sin t}{t}.$

Quyidagi tasvirlarning orjinallarini toping:

331.  $F(p) = p - \sin \frac{1}{p}.$

336.  $F(p) = \frac{1}{p(p^2+1)(p^2+4)}.$

332.  $F(p) = p \ln \left( 1 + \frac{1}{p^2} \right).$

337.  $F(p) = \frac{p}{p^2 - 2p + 5}.$

333.  $F(p) = \frac{p+3}{p(p^2-4p+3)}.$

338.  $F(p) = \frac{p}{p^2 - 2p + 5}.$

334.  $F(p) = \frac{p+1}{p(p-1)(p-2)(p-3)}.$

339.  $F(p) = \frac{p+2}{(p+1)(p-2)(p^2+4)}.$

335.  $F(p) = \frac{1}{p(1+p^4)}.$

340.  $F(p) = \frac{p+2}{p^3(p-1)^2}.$

## Mustaqil ish topshiriqlari

$$341. \quad F(p) = \frac{p}{p^4 - 1}.$$

$$346. \quad F(p) = \frac{1}{p(p-1)(p^2+1)}.$$

$$342. \quad F(p) = \frac{1}{p(p^4 - 1)},$$

$$347. \quad F(p) = \frac{p^2}{(p^2+1)^2},$$

$$343. \quad F(p) = \frac{1}{p^4 - 1}.$$

$$348. \quad F(p) = \frac{1}{(p+1)(p^2 + 2p + 2)},$$

$$344. \quad F(p) = \frac{1}{(p-1)(p^2+1)},$$

$$349. \quad F(p) = \frac{p}{(p+1)(p^2 + 2p + 2)},$$

$$345. \quad F(p) = \frac{p}{(p-1)(p^2+1)},$$

$$350. \quad F(p) = \frac{1}{p(p+1)(p^2 + 2p + 2)}.$$

### 6. Differensial tenglamalar va ularning sistemalarini operatsion hisob usuli bilan yechish.

Ushbu

$$x''(t) + a_1 x'(t) + a_2 x(t) = f(t) \quad (3.91)$$

chiziqli differensial tenglamaning  $x(0) = x_0$ ,  $x'(0) = x_1$  boshlan-g'ic h shartlarni qanoatlantiruvchi yechimini topish talab qilinsin. Bu yerda  $a_1$ ,  $a_2$  – berilgan haqiqiy sonlar,  $f(t)$  – ma'lum funksiya. Izlanayotgan  $x(t)$  funksiya, uning qaralayotgan barcha hosilalari va  $f(t)$  funksiya originallar bo'lsin deb faraz qilaylik.

$$x(t) \leftarrow \bar{x}(p) \text{ va } x(t) = t^2 - 3t + 4$$

bo'lsin. Originalni differensialash qoidasiga asosan quyidagilarga ega bo'tamiz:

$$x'(t) \leftarrow p\bar{x}(p) - x(0),$$

$$x''(t) \leftarrow p^2\bar{x}(p) - px(0) - x'(0).$$

Tasvirlarning chiziqliligidan foydalanib, (3.91) tenglamada tasvir-larga o'tamiz:

$p^2\bar{x}(p) - px(0) - x'(0) + a_1 [p\bar{x}(p) - x(0)] + a_2\bar{x}(p) = F(p)$   
yoki

$$(p^2 + a_1 p + a_2)\bar{x}(p) - (p + a_1)x_0 - x_1 = F(p). \quad (3.92)$$

(3.92) tenglamani  $\bar{x}(p)$  ga nisbatan yechib

$$\bar{x}(p) = \frac{(p+a_1)x_0 + x_1}{p^2 + a_1 p + a_2} + \frac{F(p)}{p^2 + a_1 p + a_2} \quad (3.93)$$

ni topamiz.  $\bar{x}(p)$  ning originali (3.91) tenglamaning boshlang'ich shartlarni qanoatlan tiruvchi yechimi bo'ladi.

Shu kabi istalgan  $n$ -tartibli o'zgarmas koeffitsiyentli chiziqli differensial tenglamarning yechimini boshlang'ich shartlarda topish mumkin.

**1- misol.**  $x'' - 5x' + 4x = 4$  tenglamani  $x(0) = 0$ ,  $x'(0) = 2$  boshlang'ich shartlarda integrallang.

Yechish.  $x(t) \leftarrow \bar{x}(p)$  deymiz, u holda berilgan boshlang'ich shartlarga asosan

$$\begin{aligned} x' &\leftarrow p\bar{x}(p) - x(0) = p\bar{x}(p), \\ x'' &\leftarrow p^2\bar{x}(p) - px(0) - x'(0) = p^2\bar{x}(p) - 2, \\ 4 &\leftarrow \frac{4}{p}. \end{aligned}$$

Berilgan tenglamada barcha funksiyalarni ularning tasvirlari bilan almashtirib, quyidagi operatorli tenglamani hosil qilamiz:

$$(p^2 - 5p + 4)\bar{x}(p) = \frac{4}{p} + 2.$$

Bu tenglamadan  $\bar{x}(p)$  ni aniqlaymiz:

$$\bar{x}(p) = \frac{4+2p}{p(p^2-5p+4)}.$$

Tenglikning o'ng tomonini elementar kasrlarga ajratamiz, u holda

$$\bar{x}(p) = \frac{1}{p} - \frac{2}{p-1} + \frac{1}{p-4}$$

ni hosil qilamiz. Bunda originalga o'tib, tenglamaning yechimini topamiz:

$$x(t) = 1 - 2e^t + e^{4t}.$$

Endi quyidagi o'zgarmas koeffitsiyentli differensial tenglamalar sistemasini qaraymiz:

$$\begin{cases} \frac{dx}{dt} = a_1 x + b_1 y + f_1(t), \\ \frac{dy}{dt} = a_2 x + b_2 y + f_2(t). \end{cases} \quad (3.94)$$

Bu sisteme maning

$$x(0) = x_0, \quad y(0) = y_0 \quad (3.95)$$

boshlang'ich shartlarni qanoatlanti ruvchi yechimini topamiz. Bunda biz  $f_1(t)$ ,  $f_2(t)$ ,  $x(t)$ ,  $y(t)$  funksiyalarni  $x'(t)$  va  $y'(t)$  larning originallari deb faraz qilamiz:

$x(t) \leftarrow \bar{x}(p)$ ,  $y(t) \leftarrow \bar{y}(p)$ ,  $f_1(t) \leftarrow F_1(p)$ ,  $f_2(t) \leftarrow F_2(p)$  bo'lsin.

(3.95) boshlang'ich shartlarni e'tiborga olib, originallarni differensiallash qoidasidan foydalanib

$$x'(t) \leftarrow p\bar{x}(p) - x_0, \quad y'(t) \leftarrow p\bar{y}(p) - y_0$$

larni topamiz.

Endi (3.94) sistema har bir tenglamasining ikkala tomoniga Laplas almashirishlarini qo'llab,  $\bar{x}(p)$  va  $\bar{y}(p)$  larga nisbatan quyidagi sistemani hosil qilamiz:

$$\begin{cases} p\bar{x}(p) = a_1\bar{x}(p) + b_1\bar{y}(p) + F_1(p) + x_0, \\ p\bar{y}(p) = a_2\bar{x}(p) + b_2\bar{y}(p) + F_2(p) + y_0. \end{cases} \quad (3.96)$$

(3.96) sistemaning yechimi:

$$\bar{x}(p) = \frac{b_1[F_2(p) + y_0] + (p - b_2)[F_1(p) + x_0]}{(p - a_1)(p - b_2) - a_2 b_1}, \quad (3.97)$$

$$\bar{y}(p) = \frac{a_2[F_1(p) + x_0] + (p - a_1)[F_2(p) + y_0]}{(p - a_1)(p - b_2) - a_2 b_1}. \quad (3.98)$$

(3.97) va (3.98)da originalga o'tib, (3.94) sistemaning (3.95) boshlang'ich shartlarni qanoatlantiruvchi yechimini hosil qilamiz.

### Mustaqil ish topshiriqlari

Quyidagi tenglamalarning yechimini toping:

$$351. \quad x' + 3x = e^{-2t}, \quad x(0) = 0.$$

$$352. \quad x' - x = \cos t - \sin t, \quad x(0) = 0.$$

$$353. \quad 2x' + 6x = te^{-3t}, \quad x(0) = -\frac{1}{2}.$$

$$354. \quad x'' + 6x' = 12t + 2, \quad x(0) = 0, \quad x'(0) = 0.$$

$$355. \quad x'' + 4x' + 4 = 4, \quad x(0) = 1, \quad x'(0) = -4.$$

$$356. \quad x'' + x = \cos t, \quad x(0) = -1, \quad x'(0) = 1.$$

$$357. \quad x'' + 3x' + 2x = 2t^2 + 1, \quad x(0) = 4, \quad x'(0) = -3.$$

$$358. \quad x'' - x' = 2 \sin t, \quad x(0) = 2, \quad x'(0) = 0.$$

$$359. \quad x'' - 4x' + 5x = 2e^{2t} (\sin t + \cos t), \quad x(0) = 1, \quad x'(0) = 2.$$

$$360. \quad x'' - 4x' = 1, \quad x(0) = 0, \quad x'(0) = -\frac{1}{4}, \quad x''(0) = 0.$$

Quyidagi tenglamalar sistemasining yechimini toping:

$$361. \quad \begin{cases} \frac{dx}{dt} + x - 2y = 0, \\ \frac{dy}{dt} + x + 4y = 0. \end{cases} \quad x(0)=1, y(0)=1.$$

$$362. \quad \begin{cases} \frac{dx}{dt} + 2y = 3t, \\ \frac{dy}{dt} - 2x = 4. \end{cases} \quad x(0)=2, y(0)=3.$$

$$363. \quad \begin{cases} \frac{dx}{dt} - \frac{dy}{dt} = -\sin t, \\ \frac{dx}{dt} + \frac{dy}{dt} = \cos t. \end{cases} \quad x(0) = \frac{1}{2}, \quad y(0) = -\frac{1}{2}.$$

364.  $\begin{cases} \frac{dx}{dt} = 4y + z, \\ \frac{dy}{dt} = z, \\ \frac{dz}{dt} = 4y. \end{cases}$   $x(0)=5, y(0)=0, z(0)=4.$

365.  $\begin{cases} \frac{dx}{dt} - \frac{dy}{dt} - 2x + 2y = 1 - 2t, \\ \frac{d^2x}{dt^2} + 2\frac{dy}{dt} + x = 0. \end{cases}$   $x(0)=y(0)=x'(0)=0.$

366.  $\begin{cases} \frac{dx}{dt} + 4y + 2x = 4t + 1, \\ \frac{dy}{dt} + x - y = \frac{3}{2}t^2. \end{cases}$   $x(0)=y(0)=0.$

367.  $\begin{cases} \frac{dx}{dt} + y - 2x = 0, \\ \frac{dy}{dt} + x - 2y = -5e^t \sin t. \end{cases}$   $x(0)=2, y(0)=3.$

368.  $\begin{cases} \frac{d^2x}{dt^2} + x + y = 5, \\ \frac{d^2y}{dt^2} - 4x - 3y = -3. \end{cases}$   $x(0)=y(0)=x'(0)=y'(0)=0.$

369.  $\begin{cases} \frac{dx}{dt} + 2\frac{dy}{dt} + x + y + z = 0, \\ \frac{dx}{dt} + \frac{dy}{dt} + x + z = 0. \end{cases}$   $x(0)=y(0)=1, z(0)=-2.$   
 $\frac{dz}{dt} - 2\frac{dy}{dt} - y = 0,$

370.  $\begin{cases} \frac{d^2x}{dt^2} = x - 4y, \\ \frac{d^2y}{dt^2} = -x + y. \end{cases}$   $x(0) = 2, \quad y(0) = 0,$   
 $x'(0) = -\sqrt{3}, \quad y'(0) = \frac{\sqrt{3}}{2}.$

## 6- §. Matematik fizika tenglamalarining tiplari

Ushbu ko'rinishdagi

$$F\left(x, y, U, \frac{\partial U}{\partial x}, \frac{\partial U}{\partial y}, \frac{\partial^2 U}{\partial x^2}, \frac{\partial^2 U}{\partial x \cdot \partial y}, \frac{\partial^2 U}{\partial y^2}\right) = 0 \quad (3.99)$$

differensial tenglamaga *ikkinchitartibli ikki o'zgaruvchili xususiy hosilalari differensial tenglama* deyiladi.

$$a_{11}(x, y) \frac{\partial^2 u}{\partial x^2} + 2a_{12}(x, y) \frac{\partial^2 u}{\partial x \cdot \partial y} + a_{22}(x, y) \frac{\partial^2 u}{\partial y^2} + F\left(x, y, u, \frac{\partial u}{\partial x}, \frac{\partial u}{\partial y}\right) = 0 \quad (3.100)$$

ko'ri nishdagi tenglama *ikkinchitartibli xususiy hosilalarga nisbatan chiziqli tenglama* deyiladi.

Agar (3.100) tenglama ushbu

$$\begin{aligned} & a_{11}(x, y) \frac{\partial^2 u}{\partial x^2} + 2a_{12}(x, y) \frac{\partial^2 u}{\partial x \cdot \partial y} + a_{22}(x, y) \frac{\partial^2 u}{\partial y^2} + \\ & + a_{13}(x, y) \frac{\partial u}{\partial x} + a_{23}(x, y) \frac{\partial u}{\partial y} + a_{33}(x, y)u + f = 0 \end{aligned} \quad (3.101)$$

ko'rinishda bo'lsa, bunday tenglama *chiziqli* deyiladi. Agar (3.101) tenglamaning koeffitsiyentlari  $x$  va  $y$  o'zgaruvchilarga bog'liq bo'lmasa, tenglama *o'zgarmas koeffitsiyentli* deyiladi. (3.101) tenglamada  $f(x, y)=0$  bo'lsa, unga *bir jinsli* deyiladi.

$$a_{11}(dy)^2 - 2a_{12}dxdy + a_{22}(dx)^2 = 0 \quad (3.102)$$

tenglama (3.101) tenglamaning *xarakteristik tenglamasi* deyiladi.

(3.102) tenglama quyi dagi ikkita birinchi tartibli oddiy differential tenglamalarga ajraladi:

$$\frac{dy}{dx} = \frac{a_{12} + \sqrt{a_{12}^2 - a_{11} \cdot a_{22}}}{a_{11}}, \quad \frac{dy}{dx} = \frac{a_{12} - \sqrt{a_{12}^2 - a_{11} \cdot a_{22}}}{a_{11}}. \quad (3.103)$$

Bu tenglamalardagi ildiz ostidagi ifodaning ishorasi (3.101) tenglamani tiplarga (turlarga) ajratadi.

Agar  $M$  nuqtada  $a_{12}^2 - a_{11} \cdot a_{22} > 0$  bo'lsa, (3.101) tenglama  $M$  nuqtada *giperbolik tipdagisi tenglama* deyiladi. Giperbolik tipdagisi (3.101) tenglamada  $x$  va  $y$  o'zgaruvchilarni

$$\xi = \varphi(x, y), \quad \eta = \psi(x, y)$$

tengliklarga asosan  $\xi$  va  $\eta$  larga almashtirsak, (3.101) tenglama

$$\frac{\partial^2 u}{\partial \xi \partial \eta} + a_{13} \frac{\partial u}{\partial \xi} + a_{13} \frac{\partial u}{\partial \eta} + a_{33} u + f = 0 \quad (3.104)$$

yoki

$$\frac{\partial^2 u}{\partial \xi^2} - \frac{\partial^2 u}{\partial \eta^2} + a_{13} \frac{\partial u}{\partial \xi} + a_{23} \frac{\partial u}{\partial \eta} + a_{33} u + f = 0 \quad (3.105)$$

ko'rinishdagi giperbolik tipdagi tenglamaga keladi.

Torning ko'ndalang tebranishi, sterjenning uzunasiiga tebranishi, o'tkazgichdagi elektr tebranishlar, aylanuvchi silindriddagi (valdag'i) aylanma tebranishlar, gazning tebranishlari va shunga oxshash tebranish jarayonlarini o'rGANISH giperbolik tipdagi tenglamlarga olib keladi.

**1- misol.**  $x^2 \cdot \frac{\partial^2 u}{\partial x^2} - y^2 \cdot \frac{\partial^2 u}{\partial y^2} = 0$  tenglamani kanonik ko'rinishga keltiring.

**Yechish.** Bunda  $a_{11} = x^2$ ,  $a_{12} = 0$ ,  $a_{22} = -y^2$ ,  $a_{12}^2 - 4a_{11}a_{22} = x^2 y^2 > 0$ . Demak, tenglama giperbolik tipda ekan. Xarakteristik tengla masini tuzamiz:

$$x^2(dy)^2 - y^2(dx)^2 = 0 \text{ yoki } (xdy - ydx)(xdy + ydx) = 0.$$

Bu tenglik ikkita differensial tenglamaga ajratiladi:

$$xdy - ydx = 0 \text{ va } xdy + ydx = 0.$$

Bundan  $\frac{dy}{y} + \frac{dx}{x} = 0$  yoki  $xy = C_1$ ,  $\frac{dy}{y} - \frac{dx}{x} = 0$  yoki  $\frac{y}{x} = C_2$ .

Endi  $\xi = xy$ ,  $\eta = \frac{y}{x}$  almashtirishlarni bajaramiz.  $x$  va  $y$  o'zgaruvchilarning xususiy hosilalarini yangi  $\xi$  va  $\eta$  o'zgaruvchilar orqali ifodalaymiz:

$$\frac{\partial u}{\partial x} = \frac{\partial u}{\partial \xi} \cdot \frac{\partial \xi}{\partial x} + \frac{\partial u}{\partial \eta} \cdot \frac{\partial \eta}{\partial x} = \frac{\partial u}{\partial \xi} \cdot y - \frac{\partial u}{\partial \eta} \cdot \frac{y}{x^2};$$

$$\frac{\partial u}{\partial y} = \frac{\partial u}{\partial \xi} \cdot \frac{\partial \xi}{\partial y} + \frac{\partial u}{\partial \eta} \cdot \frac{\partial \eta}{\partial y} = \frac{\partial u}{\partial \xi} \cdot x + \frac{\partial u}{\partial \eta} \cdot \frac{1}{x};$$

$$\begin{aligned}
\frac{\partial^2 u}{\partial x^2} &= \frac{\partial}{\partial x} \left( \frac{\partial u}{\partial \xi} \cdot y \right) - \frac{\partial}{\partial x} \left( \frac{\partial u}{\partial \eta} \cdot \frac{y}{x^2} \right) = \left( \frac{\partial^2 u}{\partial \xi^2} \cdot \frac{\partial \xi}{\partial x} + \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} \cdot \frac{\partial \eta}{\partial x} \right) \cdot y - \\
&- \left( \frac{\partial^2 u}{\partial \eta \cdot \partial \xi} \cdot \frac{\partial \xi}{\partial x} + \frac{\partial^2 u}{\partial \eta^2} \cdot \frac{\partial \eta}{\partial x} \right) \cdot \frac{y}{x^2} + \frac{\partial u}{\partial \eta} \cdot \frac{2y}{x^3} = \left( \frac{\partial^2 u}{\partial \xi^2} \cdot y - \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} \cdot \frac{y}{x^2} \right) \cdot y - \\
&\left( \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} \cdot y - \frac{\partial^2 u}{\partial \eta^2} \cdot \frac{y}{x^2} \right) \cdot \frac{y}{x^2} + \frac{\partial u}{\partial \eta} \cdot \frac{2y}{x^3} = \frac{\partial^2 u}{\partial \xi^2} \cdot y^2 - 2 \cdot \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} \cdot \frac{y^2}{x^2} + \frac{\partial^2 u}{\partial \eta^2} \cdot \frac{y^2}{x^4} + 2 \cdot \frac{\partial u}{\partial \eta} \cdot \frac{y}{x^3}; \\
\frac{\partial^2 u}{\partial y^2} &= \left( \frac{\partial^2 u}{\partial \xi^2} \cdot \frac{\partial \xi}{\partial y} + \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} \cdot \frac{\partial \eta}{\partial y} \right) \cdot x + \left( \frac{\partial^2 u}{\partial \eta \cdot \partial \xi} \cdot \frac{\partial \xi}{\partial y} + \frac{\partial^2 u}{\partial \eta^2} \cdot \frac{\partial \eta}{\partial y} \right) = \\
&= x \cdot \left( \frac{\partial^2 u}{\partial \xi^2} \cdot x + \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} \cdot \frac{1}{x} \right) + \left( \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} \cdot x + \frac{\partial^2 u}{\partial \eta^2} \cdot \frac{1}{x} \right) \cdot \frac{1}{x} = \frac{\partial^2 u}{\partial \xi^2} \cdot x^2 + 2 \cdot \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} + \frac{\partial^2 u}{\partial \eta^2} \cdot \frac{1}{x^2}.
\end{aligned}$$

Hosil bo'lgan tengliklarni berilgan differentesial tenglamaga qo'yamiz:

$$\begin{aligned}
&x^2 \left( \frac{\partial^2 u}{\partial \xi^2} \cdot y^2 - 2 \cdot \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} \cdot \frac{y^2}{x^2} + \frac{\partial^2 u}{\partial \eta^2} \cdot \frac{y^2}{x^4} + 2 \cdot \frac{\partial u}{\partial \eta} \cdot \frac{y}{x^3} \right) - \\
&- y^2 \left( \frac{\partial^2 u}{\partial \xi^2} \cdot x^2 + 2 \cdot \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} \cdot \frac{y^2}{x^2} + \frac{\partial^2 u}{\partial \eta^2} \cdot \frac{1}{x^2} \right) = 0.
\end{aligned}$$

Bundan

$$\begin{aligned}
&-4 \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} \cdot y^2 + 2 \cdot \frac{\partial u}{\partial \eta} \cdot \frac{y}{x} = 0 \quad \text{yoki} \quad \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} - \frac{1}{2} \cdot \frac{\partial u}{\partial \eta} \cdot \frac{1}{xy} = 0 \\
&\text{yoki} \quad \frac{\partial^2 u}{\partial \xi \cdot \partial \eta} - \frac{1}{2\xi} \cdot \frac{\partial u}{\partial \eta} = 0.
\end{aligned}$$

Demak, tenglamaning kanonik ko'rinishi:

$$\frac{\partial^2 u}{\partial \xi \cdot \partial \eta} - \frac{1}{2\xi} \cdot \frac{\partial u}{\partial \eta} = 0.$$

Agar  $M$  nuqtada  $a_{12}^2 - a_{11}a_{22} < 0$  bo'lsa, (3.101) tenglama  $M$  nuqtada elliptik tipdagi tenglama deyiladi. Elliptik tipdagi (3.101) tenglama

$$\xi = \varphi(x, y), \quad \eta = \overline{\varphi(x, y)}$$

( $\overline{\varphi(x, y)}$ ) funksiya  $\varphi$  funksiyaga qo'shma kompleks funksiya ) almashtirishga asosan ushbu

$$\frac{\partial^2 u}{\partial \xi^2} + \frac{\partial^2 u}{\partial \eta^2} + a_{13} \frac{\partial u}{\partial \xi} + a_{23} \frac{\partial u}{\partial \eta} + a_{33} u + f = 0 \quad (3.106)$$

kanonik ko‘rinishga keladi.

Elektr va magnit maydonlar haqidagi masalalarini, statsionar is-siqlik holat haqidagi masalalarini, gidrodinamika, diffuziya va shunga o‘xshash masalalarini o‘rganish elliptik tipdagi tenglamalarga olib keladi.

## 2- misol.

$$\frac{\partial^2 z}{\partial x^2} - \frac{\partial^2 z}{\partial x \partial y} + 2 \cdot \frac{\partial^2 z}{\partial y^2} = 0$$

tenglamani kanonik ko‘rinishga keltiring.

Yechish. Tenglamada  $a_{11} = 1$ ,  $a_{12} = -1$ ,  $a_{22} = 2$ ,  $a_{12}^2 - a_{11}a_{22} = -1 < 0$ , bu esa tenglamaning elliptik tipda ekanini bildiradi.

Xarakteristik tenglamasi:

$$(dy)^2 + 2dxdy + 2(dx)^2 = 0 \text{ yoki } y'^2 + 2y' + 2 = 0.$$

Bunda  $y' = -1 \pm i$ ;  $y + x - ix = C_1$ ,  $y + x + ix = C_2$ . Quyida-gicha alma shirishni bajaramiz:  $\xi = y + x$ ,  $\eta = x$ . U holda:

$$\frac{\partial z}{\partial x} = \frac{\partial z}{\partial \xi} \frac{\partial \xi}{\partial x} + \frac{\partial z}{\partial \eta} \frac{\partial \eta}{\partial x} = \frac{\partial z}{\partial \xi} + \frac{\partial z}{\partial \eta},$$

$$\frac{\partial z}{\partial y} = \frac{\partial z}{\partial \xi} \frac{\partial \xi}{\partial y} + \frac{\partial z}{\partial \eta} \frac{\partial \eta}{\partial y} = \frac{\partial z}{\partial \xi},$$

$$\frac{\partial^2 z}{\partial x^2} = \left( \frac{\partial^2 z}{\partial \xi^2} \cdot \frac{\partial \xi}{\partial x} + \frac{\partial^2 z}{\partial \xi \partial \eta} \cdot \frac{\partial \eta}{\partial x} \right) + \left( \frac{\partial^2 z}{\partial \xi \partial \eta} \cdot \frac{\partial \xi}{\partial x} + \frac{\partial^2 z}{\partial \eta^2} \cdot \frac{\partial \eta}{\partial x} \right) = \frac{\partial^2 z}{\partial \xi^2} + 2 \cdot \frac{\partial^2 z}{\partial \xi \partial \eta} + \frac{\partial^2 z}{\partial \eta^2},$$

$$\frac{\partial^2 z}{\partial x \partial y} = \frac{\partial^2 z}{\partial \xi^2} \cdot \frac{\partial \xi}{\partial y} + \frac{\partial^2 z}{\partial \xi \partial \eta} \cdot \frac{\partial \eta}{\partial y} = \frac{\partial^2 z}{\partial \xi^2} + \frac{\partial^2 z}{\partial \xi \partial \eta};$$

$$\frac{\partial^2 z}{\partial y^2} = \frac{\partial^2 z}{\partial \xi^2} \frac{\partial \xi}{\partial y} + \frac{\partial^2 z}{\partial \xi \partial \eta} \cdot \frac{\partial \eta}{\partial y} = \frac{\partial^2 z}{\partial \xi^2}.$$

Hosil bo‘lgan tengliklarni tenglamaga qo‘yib, kanonik tenglama ko‘rinishini hosil qilamiz:

$$\frac{\partial^2 z}{\partial \xi^2} + 2 \frac{\partial^2 z}{\partial \xi \partial \eta} + \frac{\partial^2 z}{\partial \eta^2} + \frac{\partial^2 z}{\partial \xi^2} - 2 \frac{\partial^2 z}{\partial \xi \partial \eta} + \frac{\partial^2 z}{\partial \xi^2} = 0$$

yoki

$$\frac{\partial^2 z}{\partial \xi^2} + \frac{\partial^2 z}{\partial \eta^2} = 0.$$

Agar  $M$  nuqtada  $a_{12}^2 - a_{11}a_{22} = 0$  bo'lsa, (3.119) tenglama  $M$  nuqtada parabolik tipdag'i tenglama deyiladi. Parabolik tipdag'i (3.101) tenglamada o'zgaruvchilarni

$$\xi = \phi(x, y), \quad \eta = \eta(x, y)$$

shaklda almashtirsak, u ushb'u

$$\frac{\partial^2 u}{\partial \xi^2} + a_{13} \frac{\partial u}{\partial \xi} + a_{23} \frac{\partial u}{\partial \eta} + a_{33} u + f = 0 \quad (3.107)$$

kanonik ko'rinishiga keladi.

Issiqlikning tarqali sh' jarayoni, g'ovak muhitda suyuqlik va gazzining filtrlanish masalasi va shunga o'xhash masalalarni o'rganish parabolik tipdag'i tenglarmaga olib keladi.

3- misol.

$$\frac{\partial^2 z}{\partial x^2} \cdot \sin^2 x - 2y \sin x \cdot \frac{\partial^2 z}{\partial x \partial y} + y^2 \cdot \frac{\partial^2 z}{\partial y^2} = 0$$

tenglamani kanonik ko'rinishiga keltiriting.

Yechish. Tenglamada  $a_{11} = \sin^2 x$ ,  $a_{12} = -y \sin x$ ,  $a_{22} = y^2$ . Bundan esa  $a_{12}^2 - a_{11}a_{22} = y^2 \sin^2 x - y^2 \sin^2 x = 0$ . Demak, tenglama parabolik tipda ekani.

Xarakteristik tenglarnasini tuzamiz:

$$\sin^2 x (dy)^2 + 2y \sin x dx dy + y^2 (dx)^2 = 0 \text{ yoki } (\sin x dy + y dx)^2 = 0.$$

$\xi = y \cdot \operatorname{tg} \frac{x}{2}$ ,  $\eta = y$  almashtirish yordamida  $x$  va  $y$  o'zgaruvchilardan  $\xi$  va  $\eta$  o'zgaruvchilarga o'tamiz:

$$\frac{\partial z}{\partial x} = \frac{\partial z}{\partial \xi} \cdot \frac{\partial \xi}{\partial x} + \frac{\partial z}{\partial \eta} \cdot \frac{\partial \eta}{\partial x} = \frac{1}{2} \frac{\partial z}{\partial \xi} \cdot y \sec^2 \frac{x}{2},$$

$$\frac{\partial z}{\partial y} = \frac{\partial z}{\partial \xi} \cdot \frac{\partial \xi}{\partial y} + \frac{\partial z}{\partial \eta} \cdot \frac{\partial \eta}{\partial y} = \frac{\partial z}{\partial \xi} \cdot \operatorname{tg} \frac{x}{2} + \frac{\partial z}{\partial \eta};$$

$$\begin{aligned}\frac{\partial^2 z}{\partial x^2} &= \frac{1}{2} \left( \frac{\partial^2 z}{\partial \xi^2} \cdot \frac{\partial \xi}{\partial x} + \frac{\partial^2 z}{\partial \xi \partial \eta} \cdot \frac{\partial \eta}{\partial x} \right) \cdot y \sec^2 \frac{x}{2} + \frac{1}{2} \frac{\partial z}{\partial \xi} \cdot y \sec^2 \frac{x}{2} \operatorname{tg} \frac{x}{2} = \\ &= \frac{1}{4} \frac{\partial^2 z}{\partial \xi^2} \cdot y^2 \sec^4 \frac{x}{2} + \frac{1}{2} y \frac{\partial z}{\partial \xi} \cdot \sec^2 \frac{x}{2} \operatorname{tg} \frac{x}{2};\end{aligned}$$

$$\begin{aligned}\frac{\partial^2 z}{\partial y^2} &= \left( \frac{\partial^2 z}{\partial \xi^2} \cdot \frac{\partial \xi}{\partial y} + \frac{\partial^2 z}{\partial \xi \partial \eta} \cdot \frac{\partial \eta}{\partial y} \right) \cdot \operatorname{tg} \frac{x}{2} + \frac{\partial^2 z}{\partial \eta \partial \xi} \frac{\partial \xi}{\partial y} + \frac{\partial^2 z}{\partial \eta^2} \frac{\partial \eta}{\partial y} = \\ &= \frac{1}{4} \frac{\partial^2 z}{\partial \xi^2} \cdot \operatorname{tg}^2 \frac{x}{2} + 2 \frac{\partial^2 z}{\partial \xi \partial \eta} \operatorname{tg} \frac{x}{2} + \frac{\partial^2 z}{\partial \eta^2},\end{aligned}$$

$$\begin{aligned}\frac{\partial^2 z}{\partial x \partial y} &= \frac{1}{2} \left( \frac{\partial^2 z}{\partial \xi^2} \cdot \frac{\partial \xi}{\partial y} + \frac{\partial^2 z}{\partial \xi \partial \eta} \cdot \frac{\partial \eta}{\partial y} \right) \cdot y \sec^2 \frac{x}{2} + \frac{1}{2} \frac{\partial z}{\partial \xi} \cdot \sec^2 \frac{x}{2} = \\ &= \frac{1}{2} \left( \frac{\partial^2 z}{\partial \xi^2} \operatorname{tg} \frac{x}{2} + \frac{\partial^2 z}{\partial \xi \partial \eta} \right) \cdot y \sec^2 \frac{x}{2} + \frac{1}{2} \frac{\partial z}{\partial \xi} \cdot \sec^2 \frac{x}{2}.\end{aligned}$$

Hosil bo'lgan tengliklarni berilgan tenglamaga qo'yamiz:

$$\begin{aligned}&\frac{1}{4} \frac{\partial^2 z}{\partial \xi^2} \cdot y^2 \sec^4 \frac{x}{2} \sin^2 x + \frac{1}{2} y \frac{\partial z}{\partial \xi} \cdot \sec^2 \frac{x}{2} \cdot \operatorname{tg} \frac{x}{2} \sin^2 x - \\ &- \left( \frac{\partial^2 z}{\partial \xi^2} \operatorname{tg} \frac{x}{2} + \frac{\partial^2 z}{\partial \xi \partial \eta} \right) \cdot y^2 \sec^2 \frac{x}{2} \sin x - \frac{\partial z}{\partial \xi} y \cdot \sec^2 \frac{x}{2} \cdot \sin x + \\ &+ y^2 \left( \frac{\partial^2 z}{\partial \xi^2} \cdot \operatorname{tg}^2 \frac{x}{2} + 2 \frac{\partial^2 z}{\partial \xi \partial \eta} \operatorname{tg} \frac{x}{2} + \frac{\partial^2 z}{\partial \eta^2} \right) = 0.\end{aligned}$$

Qavslarni ochib chiqib elementar amallarni bajarsak, tenglama quyidagi ko'rinishga keladi:

$$\frac{1}{2} \cdot y \frac{\partial z}{\partial \xi} \cdot \sec^2 \frac{x}{2} \operatorname{tg} \frac{x}{2} \sin^2 x + \frac{\partial^2 z}{\partial \eta^2} y^2 - \frac{\partial z}{\partial \xi} \cdot y \sec^2 \frac{x}{2} \sin x = 0$$

yoki

$$y \frac{\partial^2 z}{\partial \eta^2} = \frac{\partial z}{\partial \xi} \sin x.$$

Lekin  $\sin x = \frac{2 \operatorname{tg}(x/2)}{1 + \operatorname{tg}^2(x/2)}$ ,  $\operatorname{tg} \frac{x}{2} = \frac{\xi}{\eta}$  ekanidan  $\sin x = \frac{2\xi\eta}{\xi^2 + \eta^2}$  ni

topamiz. Demak, berilgan tenglarning kanonik ko'rinishi :

$$\frac{\partial^2 z}{\partial \eta^2} = \frac{2\xi}{\xi^2 + \eta^2} \cdot \frac{\partial z}{\partial \xi}.$$

Agar (3.104)–(3.107) tenglamalarda  $U = U(\xi, \eta)$  funksiyani  $U = e^{\lambda\xi + \mu\eta} \cdot V$  tenglikka asosan yangi  $V = V(\xi, \eta)$  funksiyaga almashtirsak, ular quyidagi sodda ko'rinishga keladi:

$$\begin{cases} \frac{\partial^2 V}{\partial \xi \partial \eta} + \gamma V + f_1 = 0, \\ \frac{\partial^2 V}{\partial \xi^2} - \frac{\partial^2 V}{\partial \eta^2} + \gamma V + f_1 = 0, \end{cases} \quad (\text{giperbolik tip})$$

$$\frac{\partial^2 V}{\partial \xi^2} + \frac{\partial^2 V}{\partial \eta^2} + \gamma V + f_1 = 0 \quad (\text{elliptik tip})$$

$$\frac{\partial^2 V}{\partial \xi^2} + a_{23} \frac{\partial V}{\partial \eta} + f_1 = 0. \quad (\text{parabolik tip})$$

Bunda  $\gamma, a_{13}, a_{23}, a_{33}$  — parametrlarga bog'liq bo'lgan o'zgarmas kattalik:  $f_1 = f \cdot e^{-(\lambda\xi + \mu\eta)}$ ;  $\lambda = -a_{13}/2$ ;  $\mu = -a_{23}/2$ .

(3.101) tenglama yechimlari ning analitik ifodasini xususiy holarda Dalamber, Furge, Grin, potensiallar va h.k. usullar bilan topish mumkin. Agar yechimlarning son qiymatlarini topish tabab qilinsa, u vaqtida chekli ayirmalar, setkalar, variatsion va h.k. usullar qo'llari tiladi.

Har bir usulning o'ziga xos qulayligi bor. Shuning uchun masalaning qo'yilishiga qarab, mos usullaridan birini tanlab olish maqsadga muvofiqdir.

## Mustaqil yechish uchun misollar

**Quyidagi tenglamalarni kanonik ko‘rinishga keltiring:**

$$371. x^2 \cdot \frac{\partial^2 z}{\partial x^2} + 2xy \frac{\partial^2 z}{\partial x \partial y} + y^2 \frac{\partial^2 z}{\partial y^2} = 0.$$

$$372. \frac{\partial^2 z}{\partial x^2} - 4 \frac{\partial^2 z}{\partial x \partial y} - 3 \frac{\partial^2 z}{\partial y^2} - 2 \frac{\partial z}{\partial x} + 6 \frac{\partial z}{\partial y} = 0.$$

$$373. \frac{1}{x^2} \cdot \frac{\partial^2 z}{\partial x^2} + \frac{1}{y^2} \frac{\partial^2 z}{\partial y^2} = 0.$$

$$374. \frac{\partial^2 z}{\partial x^2} + 2 \frac{\partial^2 z}{\partial x \partial y} - 3 \frac{\partial^2 z}{\partial y^2} + 2 \frac{\partial z}{\partial x} + 6 \frac{\partial z}{\partial y} = 0.$$

$$375. \frac{\partial^2 z}{\partial x^2} + 4 \frac{\partial^2 z}{\partial x \partial y} + 5 \frac{\partial^2 z}{\partial y^2} + \frac{\partial z}{\partial x} + 2 \frac{\partial z}{\partial y} = 0.$$

$$376. y^2 \frac{\partial^2 z}{\partial x^2} + 2xy \frac{\partial^2 z}{\partial x \partial y} + 2x^2 \frac{\partial^2 z}{\partial y^2} + y \frac{\partial z}{\partial y} = 0.$$

### 7- §. Tor tebranish tenglamasini Dalamber usuli bilan yechish

Dalamber usulida (3.101) tenglama (3.103) xarakteristikalar yordamida kanonik ko‘rinishga keltiriladi. Kanonik ko‘rinishdagi tenglamani integrallab, avvalgi o‘zgaruvchilarga o‘tilsa, (3.101) tenglamaning izlangan yechimi hosil bo‘ladi.

Bu usulni chegaralanmagan tor tebranishi masalasida ko‘raylik:

$$\frac{\partial^2 U}{\partial t^2} = a^2 \frac{\partial^2 U}{\partial x^2}, \quad (a=\text{const}) \quad (3.108)$$

$$\left. \begin{aligned} U(x, t) \Big|_{t=0} &= f_1(x), \\ \frac{\partial U}{\partial t} \Big|_{t=0} &= f_2(x). \end{aligned} \right\} \quad (3.109)$$

Uslubu (3.109) ifoda boshlang‘ich shartlar bo‘lib,  $f_1(x)$  funksiya torning boshlang‘ich holatini,  $f_2(x)$  funksiya esa boshlang‘ich tezligini ifodalaydi.

(3.108) tenglamaning xarakteristik tenglamasi

$$d\mathbf{x}^2 - a^2 dt^2 = 0 \quad (3.110)$$

ko'rinishda bo'lib, unda  $a_{12}^2 - a_{11} a_{22} = a^2 > 0$ , demak, tenglama giperbolik tipdagi tenglama. Uning xarakteristikalari

$$\mathbf{x} - at = C_1, \quad \mathbf{x} + at = C_2, \quad (3.111)$$

u holda

$$\xi = x - at, \quad \eta = x + at \quad (3.112)$$

almashtirish yordamida (3.108) tenglama

$$\frac{\partial^2 U}{\partial \xi \partial \eta} = 0 \quad (3.113)$$

ko'rinishdagi kanonik tenglamaga keladi. (3.113) tenglamani fiksirlangan  $\eta$  da  $\xi$  o'zgaruvchi bo'yicha integrallab, birinchi tartibli

$$\frac{\partial U}{\partial \eta} = Q(\eta) \quad (3.114)$$

xususiy hosilali tenglamani hosil qilamiz. Bunda  $Q(\eta) =$  ixtiyoriy funksiyadir. So'ng (3.114) tenglamani fiksirlangan  $\xi$  da  $\eta$  o'zgaruvchi bo'yicha integrallab,

$$U = \phi(\xi) + \psi(\eta) \quad (3.115)$$

ifodani, ya'ni (3.113) tenglamaning yechimini topamiz. Bu yerda  $\phi(\xi)$  ham ixtiyoriy funksiya,  $\psi(\eta) = \int Q(\eta) d\eta$ . (3.115) ifodada  $\xi$  va  $\eta$  o'zgaruvchilardan  $\mathbf{x}$  va  $t$  o'zgaruvchilarga o'tsak,

$$U(\mathbf{x}, t) = \phi(x - at) + \psi(x + at). \quad (3.116)$$

Oxirgi ifoda (3.108) tenglamaning umumiy yechimi bo'lib, *Dalamber integrali* deyiladi. Qo'yilgan masalaning yechimini topish uchun  $\phi$  va  $\psi$  funksiyalarini shunday tanlash kerakki, bunda  $U(x, t)$  funksiya (3.109) ni qanoatlantirsin. Buning uchun (3.116) da  $t = 0$  desak, (3.109) ning birinchiiga asosan

$$U(\mathbf{x}, 0) = \phi(x) + \psi(x) = f_1(x). \quad (3.117)$$

(3.116) ning  $t$  o'zgaruvchi bo'yicha xususiy hosilasini topib, unda  $t=0$  desak, (3.117) ning ikki nchisiga asosan

$$\frac{\partial U(x,0)}{\partial t} = -a\varphi'(x) + a\psi'(x) = f_2(x)$$

yoki

$$-\varphi'(x) + \psi'(x) = \frac{1}{a} f_2(x).$$

Burndan

$$-\varphi(x) + \psi(x) = \frac{1}{a} \int_{x_0}^x f_2(z) dz + C \quad (3.118)$$

ni topamiz. Bu yerda  $x_0$ ,  $C = \text{const.}$

(3.117) va (3.118) tenglamalarni birlgalikda yechib,

$$\begin{aligned} \varphi(x) &= \frac{1}{2} f_1(x) - \frac{1}{2a} \int_{x_0}^x f_2(z) dz - \frac{C}{2}, \\ \psi(x) &= \frac{1}{2} f_1(x) + \frac{1}{2a} \int_{x_0}^x f_2(z) dz + \frac{C}{2} \end{aligned} \quad (3.119)$$

ni topamiz. Demak, (3.116) dagi ixtiyoriy  $\varphi$  va  $\psi$  funksiyalarini (3.119) ko'rinishda olsak,  $U(x, t)$  funksiya (3.109) shartlarni qanoatlantiradi. (3.119) ni (3.116) ga qo'yib, qo'yilgan masalaning yechimini topamiz:

$$U(x, t) = \frac{f_1(x-at) + f_1(x+at)}{2} + \frac{1}{2a} \int_{x-at}^{x+at} f_2(z) dz. \quad (3.120)$$

Bu formula *Dalamber formulasi* deyiladi.

**1- misol.**

$$\frac{\partial^2 U}{\partial t^2} = \frac{\partial^2 U}{\partial x^2}$$

tenglamarning

$$U|_{t=0} = x, \quad \left. \frac{\partial U}{\partial t} \right|_{t=0} = -x$$

boshlang'ich shartlarni qanoatlantiruvchi yechimi topilsin.

**Yechis h.** Bunda  $f_1(x) = x$ ,  $f_2(x) = -x$  va  $a^2 = 1$  ekanligini e'tiborga olib, (3.120) formuladan

$$U(x,t) = \frac{x-t+x+t}{2} - \frac{1}{2} \int_{x-t}^{x+t} zdz = \\ = x - \frac{1}{4} t^2 \Big|_{x-t}^{x+t} = x - \frac{1}{4} [(x+t)^2 - (x-t)^2] = x - xt = x(1-t)$$

ni topamiz. Demak, masalaning yechimi

$$U(x,t) = x(1-t).$$

**2- masala.** Dalamber usuli bilan  $\frac{\partial^2 u}{\partial t^2} = \frac{\partial^2 u}{\partial x^2}$  tenglamaning  $\frac{\partial u}{\partial t}|_{t=0} = x^2, \frac{\partial u}{\partial t}|_{t=0} = 0$  boshlang'ich shartlarni qanoatlantiruvchi yechimi topilsin.

Yechish. Masala shartiga ko'ra,  $\alpha=1$ ,  $\phi(x)=x^2$ ,  $\psi(x)=0$ . Dalamber formulasiga asosan, masalaning yechimi

$$u = \frac{(x-t)^2 + (x+t)^2}{2} \text{ yoki } u = x^2 + t^2$$

ko'rinishda bo'ladi.

**3- masala.** Dalamber usuli bilan  $\frac{\partial^2 u}{\partial t^2} - \alpha^2 \frac{\partial^2 u}{\partial x^2} = 0$  tenglamaning  $u|_{t=0} = \cos x, \frac{\partial u}{\partial t}|_{t=0} = \sin x$  boshlang'ich shartlarni qanoatlantiruvchi yechimi topilsin.

Yechish. Bunda  $\phi(x)=\cos x$  va  $\psi(x)=\sin x$  bo'lganligi uchun Dalamber formulasiga asosan

$$u(x,y) = \frac{\cos(x-at)+\cos(x+at)}{2} + \frac{1}{2a} \int_{x-at}^{x+at} \sin zdz = \\ = \frac{1}{2} \cdot 2 \cdot \cos \frac{x-at+x+at}{2} \cdot \cos \frac{x-at-x-at}{2} - \frac{1}{2a} \cos z \Big|_{x-at}^{x+at} = \\ = \cos x \cdot \cos at - \frac{1}{2a} \cdot 2 \sin \frac{x+at+x-at}{2} \cdot \sin \frac{x-at-x-at}{2} = \\ = \cos x \cdot \cos at + \frac{1}{a} \sin x \cdot \sin at$$

yechimiga ega bo'lamiz.

**4- masala.**  $\frac{\partial^2 u}{\partial t^2} - a^2 \frac{\partial^2 u}{\partial x^2} = 0$  tenglamaning  $u|_{t=0} = x(a-x)$  va  $\frac{\partial u}{\partial t}|_{t=0} = e^{-3x}$  boshlang'ich shartlarni qanoatlantiruvchi yechimini Dalamber usuli bilan topilsin.

**Yechish.** Bu masalada  $\phi(x) = x(a-x) = ax - x^2$  va  $\psi(x) = e^{-3x}$ . Yuqoridagi formuladan foydalansak,

$$u(x,y) = \frac{1}{2} [a(x-at) - (x-at)^2 + a(x+at) - (x+at)^2] + \frac{1}{2a} \int_{x-at}^{x+at} e^{-3z} dz = \\ = ax - x^2 - a^2 t^2 - \frac{1}{6a} [e^{-3(x-at)} - e^{-3(x+at)}]$$

izlanayotgan yechimni topamiz.

### Mustaqil yechish uchun misollar

**Dalamber usuli bilan**  $\frac{\partial^2 u}{\partial t^2} = a^2 \frac{\partial^2 u}{\partial x^2}$  tenglamaning  $u|_{t=0} = f(x)$ ,

$\frac{\partial u}{\partial t}|_{t=0} = F(x)$  boshlang'ich shartlarni qanoatlantiruvchi yechimi topilsin:

377.  $f(x) = x(2-x)$ ,  $F(x) = e^{-x}$ .

378.  $f(x) = \cos x$ ,  $F(x) = \sin x$ .

379.  $f(x) = e^{-x}$ ,  $F(x) = \sin^2 x$ .

380.  $f(x) = x(2-x)$ ,  $F(x) = e^x$ .

381.  $f(x) = e^x$ ,  $F(x) = 4x$ .

382.  $f(x) = \cos x$ ,  $F(x) = \cos^2 x$ .

383.  $f(x) = \sin x$ ,  $F(x) = 8x^3$ .

384.  $f(x) = \sin^2 x$ ,  $F(x) = \cos x$ .

385.  $f(x) = e^{2x}$ ,  $F(x) = x^3$ .

386. Dalamber usuli bilan  $u|_{t=0} = 0$ ,  $\frac{\partial u}{\partial t}|_{t=0} = x$  boshlang'ich shartlarni qanoatlantiruvchi  $\frac{\partial^2 u}{\partial t^2} = 4 \frac{\partial^2 u}{\partial x^2}$  tenglamaning yechimi topilsin.

**387.**  $u|_{t=0} = 0$ ,  $\frac{\partial u}{\partial t}|_{t=0} = -x$  bo'lsa,  $\frac{\partial^2 u}{\partial t^2} = a^2 \frac{\partial^2 u}{\partial x^2}$  tenglamanning yechimi topilsin.

**388.**  $u|_{t=0} = \sin x$ ,  $\frac{\partial u}{\partial t}|_{t=0} = 1$  boshlang'ich shartlarni qanoatlan-tiruvchi  $\frac{\partial^2 u}{\partial t^2} = a^2 \frac{\partial^2 u}{\partial x^2}$  tenglamani ng  $t = \frac{\pi}{2a}$  vaqtagi yechimi topilsin.

**389.**  $\frac{\partial^2 u}{\partial t^2} = a^2 \frac{\partial^2 u}{\partial x^2}$  tenglamanning  $u|_{t=0} = 0$ ,  $\frac{\partial u}{\partial t}|_{t=0} = \cos x$  shartlarni qanoatlantiruvchi yechimi topilsin.

**390.**  $\frac{\partial^2 u}{\partial t^2} = \frac{\partial^2 u}{\partial x^2}$  tenglamanning  $t=\pi$  momentda  $u|_{t=0} = \sin x$ ,  $\frac{\partial u}{\partial t}|_{t=0} = \cos x$  shartlarni qanoatlantiruvchi yechimi topilsin.

**391.**  $\frac{\partial^2 u}{\partial t^2} = \frac{\partial^2 u}{\partial x^2}$  tenglamanning  $u|_{t=0} = x^2$ ,  $\frac{\partial u}{\partial t}|_{t=0} = \sin x$  shartlarni qanoatlantiruvchi yechimi topilsin.

**392.**  $\frac{\partial^2 u}{\partial t^2} = a^2 \frac{\partial^2 u}{\partial x^2}$  tenglamanning  $u|_{t=0} = \cos x$ ,  $\frac{\partial u}{\partial t}|_{t=0} = \sin x$  shartlarni qanoatlantiruvchi yechimi topilsin.

**393.**  $\frac{\partial^2 u}{\partial t^2} = a^2 \frac{\partial^2 u}{\partial x^2}$  tenglamanning  $u|_{t=0} = \sin x$ ,  $\frac{\partial u}{\partial t}|_{t=0} = 0$  shartlarni qanoatlantiruvchi yechimi topilsin.

## 8- §. Furye usuli

Matematik fizika tenglamalariga qo'yilgan masalalarni yechishda keng qo'llaniladigan usullardan yana biri o'zgaruvchilarni ajratish yoki *Furye usulidir*. Bu usul boshlang'ich va nolga teng bo'lgan chegaraviy shartlar bilan berilgan masalalarni yechishda samarali natija beradi.

Furye usulini uzunligi l ga teng bo'lgan va ikki uchi mahkamlangan torming erkin tebranish masalasida ko'raylik.

$$\frac{\partial^2 u}{\partial t^2} = a^2 \frac{\partial^2 u}{\partial x^2} \quad (3.121)$$

tenglamanning

$$u|_{t=0} = f_1(x), \frac{\partial u}{\partial t}|_{t=0} = f_2(x) \quad (3.122)$$

boshlang'ich va

$$U(0, t) = U(l, t) = 0 \quad (3.123)$$

chega raviy shartlarni qanoatlanuvchi yechimini topish talab qilin-gan bo'lsin. (3.121) tenglamaning yechimini Furye usuliga ko'ra

$$U(x, t) = X(x)T(t) \quad (3.124)$$

ko'rin ishda izlaymiz.

(3.124) ni (3.121) ga qo'yib, izlanayotgan  $X(x)$ ,  $T(t)$  funksiyalar-ning har biriga nisbatan oddiy differensial tenglamalarni hosil qila-miz:

$$\frac{d^2 T}{dt^2} + \lambda^2 T = 0, \quad \frac{d^2 X}{dx^2} + \frac{\lambda^2}{a^2} X = 0, \quad (3.125)$$

bu yerda  $\lambda$  – hozircha no'ma'lum bo'lgan tebranish chastotasi, bu tenglamalarning umumiy yechimlari quyidagicha bo'лади:

$$T(t) = C_1 \cos \lambda t + C_2 \sin \lambda t, \quad (3.126)$$

$$X(x) = C_3 \cos \frac{\lambda}{a} x + C_4 \sin \frac{\lambda}{a} x, \quad (3.127)$$

bunda  $C_1, C_2, C_3, C_4$  – ixtiyoriy o'zgarmas sonlar.

$U(x, t) = X(x)T(t)$  funksiya (3.123) chegaraviy shartlami qanoat-lantirishi uchun  $X(x)$  funksiya shu shartlarga bo'ysunadigan, ya'ni  $X(0)=X(l)=0$  bo'lishi kerak.  $x=0$  va  $x=l$  qiyatlarni (3.127) tenglik-ka qo'yib, (3.123) shartlarga asosan quyidagilarni topamiz:

$$C_3 = 0, \quad C_4 \sin \frac{\lambda}{a} l = 0.$$

Ixtiyoriy o'zgarmas  $C_4 \neq 0$  bo'lgani uchun

$$\sin \frac{\lambda}{a} l = 0$$

bo'lishi kerak, bundan  $n \in N$  uchun

$$\frac{\lambda}{a} l = n\pi.$$

Shunday qilib, tebranish chastotasi  $\lambda$  ushbu

$$\lambda_1 = \frac{a\pi}{l}, \quad \lambda_2 = \frac{2a\pi}{l}, \quad \dots, \quad \lambda_n = \frac{n\pi}{l}, \quad \dots$$

qiymatlardan birini qabul qiladi xolos.  $n$  ning har bir qiymati uchun, demak, har bir  $\lambda$  uchun (3.126) va (3.127) ifodalarni (3.124) ga qo'yib va  $C_1 \cdot C_4$ ,  $C_2 \cdot C_4$  larning  $\lambda = \lambda_n$  ga mos qiymatlarini  $a_n$  va  $b_n$  lar bilan belgilab, (3.121) tenglamaning (3.123) chegaraviy shartlarni qanoatlantiruvchi xususiy yechimlari ketma-ketligini hosil qilamiz:

$$U_n(x,t) = X_n(x)T_n(t) = \sum_{n=1}^{\infty} (a_n \cos \frac{an\pi}{l} t + b_n \sin \frac{an\pi}{l} t) \sin \frac{n\pi}{l} x. \quad (3.128)$$

(3.121) tenglama chiziqli va bir jinsli bo'lgani uchun (3.128) yechimlarning yig'indisi

$$U(x,t) = \sum_{n=1}^{\infty} U_n(x,t) = \sum_{n=1}^{\infty} (a_n \cos \frac{an\pi}{l} t + b_n \sin \frac{an\pi}{l} t) \sin \frac{n\pi}{l} x \quad (3.129)$$

ham (3.121) tenglamaning (3.123) chegaraviy shartlarni qanoatlanti ruvchi yechimi bo'ladi.

(3.129) yechim (3.122) boshlang'ich shartlarni ham qanoatlantirishi kerak. Bunga biz  $a_n$  va  $b_n$  koeffitsiyentlarni tanlab olish yo'li bilan erishamiz.

(3.129) yechimda va uning  $t$  bo'yicha xususiy hosilasida  $t = 0$  de-sak, (3.122) shartlarga asosan ushbu

$$\begin{aligned} U(x,0) &= \sum_{n=1}^{\infty} a_n \sin \frac{n\pi}{l} x = f_1(x), \\ \frac{\partial U(x,0)}{\partial t} &= \sum_{n=1}^{\infty} \frac{an\pi}{l} t \cdot b_n \sin \frac{n\pi}{l} x = f_2(x) \end{aligned} \quad (3.130)$$

tengliklarni hosil qilamiz. Bundan  $a_n$  va  $b_n$  koeffitsiyentlarni (Furye koeffitsiyentlari kabi) quyidagi formulalar orqali topamiz:

$$a_n = \frac{2}{l} \int_0^l f_1(x) \sin \frac{n\pi}{l} x dx, \quad b_n = \frac{2}{an\pi} \int_0^l f_2(x) \sin \frac{n\pi}{l} x dx. \quad (3.131)$$

Bularni (3.129) ga qo'ysak, masalaning ushbu

$$\begin{aligned} U(x,l) &= 2 \sum_{n=1}^{\infty} \sin \frac{n\pi}{l} x \left( \frac{1}{l} \cos \frac{an\pi}{l} t \int_0^l f_1(\xi) \cdot \sin \frac{n\pi}{l} \xi d\xi + \right. \\ &\quad \left. + \frac{1}{an\pi} \sin \frac{an\pi}{l} t \int_0^l f_2(\xi) \sin \frac{n\pi}{l} \xi d\xi \right) \end{aligned} \quad (3.132)$$

yechimi hosil bo'ladi. Bunday ko'rinishidagi yechim *Bernulli integrali* deyiladi.

**1- masala.** Uchlari  $x=0$  va  $x=l$  da mahkamlangan torning boshlang'ich holati  $u = \left(\frac{4h}{l^2}\right) \cdot x(l-x)$  parabolani ifodalasa hamda boshlang'ich tezligi  $\frac{\partial u(x,0)}{\partial t} = 0$  bo'lsa, uning  $OX$  o'qidan og'ishi aniqlansin.

Yechish. Masala shartiga ko'ra,  $\phi(x) = \frac{4h}{l^2} \cdot x(l-x)$ ,  $\psi(x) = 0$ .

Tor tenglamasining yechimini (3.147) qator ko'rinishida izlaymiz. Qatorning koeffitsiyentlari quyidagicha aniqlanadi:

$$a_k = \frac{2}{l} \int_0^l f(x) \cdot \sin \frac{k\pi x}{l} dx = \frac{8h}{l^3} \int_0^l (lx - x^2) \cdot \sin \frac{k\pi x}{l} dx, \quad b_k = 0.$$

Integralni bo'laklab integrallaymiz:

$$u_1 = lx - x^2, \quad dv_1 = \sin \frac{k\pi x}{l} dx,$$

$$du_1 = (l - 2x) dx, \quad v = -\frac{l}{k\pi} \cdot \cos \frac{k\pi x}{l};$$

$$a_k = -\frac{8h}{l^3} (lx - x^2) \frac{l}{k\pi} \cdot \cos \frac{k\pi x}{l} \Big|_0^l + \frac{8h}{k\pi l^2} \int_0^l (l - 2x) \cos \frac{k\pi x}{l} dx.$$

bundan,

$$a_k = \frac{8h}{k\pi l^2} \int_0^l (l - 2x) \cos \frac{k\pi x}{l} dx,$$

$$u_2 = l - 2x, \quad du_2 = -2 dx,$$

$$dv_2 = \cos \frac{k\pi x}{l} dx, \quad v_2 = \frac{l}{k\pi} \sin \frac{k\pi x}{l},$$

$$\begin{aligned} a_k &= \frac{8h}{k^2 \pi^2 l} (l - 2x) \sin \frac{k\pi x}{l} \Big|_0^l + \frac{16h}{k^2 \pi^2 l} \int_0^l \sin \frac{k\pi x}{l} dx = -\frac{16h}{k^3 \pi^3} \cos \frac{k\pi x}{l} \Big|_0^l = \\ &= \frac{16h}{k^3 \pi^3} (\cos k\pi - 1) = \frac{16h}{k^3 \pi^3} (1 - (-1)^k). \end{aligned}$$

Topilgan  $a_k$  va  $b_k$  larni (3.129) tenglikka qo'yamiz:

$$u(x,t) = \sum_{k=1}^{\infty} \frac{16h}{k^3\pi^3} (1 - (-1)^k) \cos \frac{k\pi at}{l} \cdot \sin \frac{k\pi x}{l}.$$

Agar  $k=2n$  bo'lsa,  $1-(-1)^k=0$ , agar  $k=2n+1$  bo'lsa,  $1-(-1)^k=2$ . U holda

$$u(x,t) = \frac{32h}{\pi^3} \sum_{n=1}^{\infty} \frac{1}{(2n+1)^3} \cos \frac{(2n+1)\pi at}{l} \sin \frac{(2n+1)\pi x}{l}$$

yechimga ega bo'lamiz.

**2- masala.** Uchlari  $x=0$ ,  $x=l$  nuqtalarga mahkamlangan tor berilgan bo'lib, boshlang'ich holati  $OAB$  siniq chiziqlidan iborat.

Agar boshlang'ich tezlik

$$f_2(x) = \begin{cases} 2\alpha x, & 0 \leq x \leq l/2 \\ 2\alpha(l-x), & l/2 \leq x \leq l \end{cases}$$

bo'lsa, ixtiyoriy  $t$  momentdagi tor holati topilsin.

Yechish. Chizmaga asosan  $OB$  va  $AB$  to'g'ri chiziqlarning tenglamasi:

$$OA : \frac{2x}{l} = \frac{y}{h} \Rightarrow y = \frac{2h}{l} x, \quad \text{agar } 0 \leq x \leq l/2;$$

$$AB : \frac{x-l/2}{l-l/2} = \frac{y-h}{-h} \Rightarrow y = \frac{2h(l-x)}{l}, \quad \text{agar } l/2 \leq x \leq l.$$

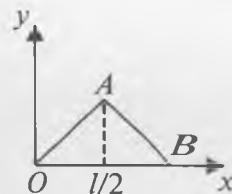

Demak, torning boshlang'ich holati

$$f_1(x) = \begin{cases} \frac{2hx}{l}, & 0 \leq x \leq l/2, \\ \frac{2h(l-x)}{l}, & l/2 \leq x \leq l. \end{cases}$$

Furye usuliga asosan qo'yilgan masala yechimini (3.129) tenglik ko'rinishida izlaymiz, ya'ni

$$U(x,t) = \sum_{n=1}^{\infty} \left( a_n \cos \frac{an\pi}{l} \cdot t + b_n \sin \frac{an\pi}{l} \cdot t \right) \cdot \sin \frac{n\pi}{l} \cdot x.$$

Bu tenglikdan  $a_n$  va  $b_n$  koeffitsiyentlarni quyidagi formulalar yordamida topamiz:

$$a_n = \frac{2}{l} \int_0^l f_1(x) \sin \frac{n\pi}{l} \cdot x dx = \frac{4h}{l^2} \int_0^{l/2} x \cdot \sin \frac{n\pi}{l} \cdot x dx + \frac{4h}{l^2} \int_{l/2}^l (l-x) \cdot \sin \frac{n\pi}{l} \cdot x dx.$$

**B**ö'laklab integrallash formula siga asosan:

$$u = x, \quad dv = \sin \frac{n\pi}{l} x dx$$

desak, bundan

$$du = dx, \quad v = -\frac{l}{n\pi} \cdot \cos \frac{n\pi}{l} x.$$

**U** holda

$$\begin{aligned} \int x \cdot \sin \frac{n\pi}{l} \cdot x dx &= -\frac{lx}{n\pi} \cos \frac{n\pi}{l} \cdot x + \frac{l}{n\pi} \int \cos \frac{n\pi}{l} \cdot x dx = \\ &= -\frac{lx}{n\pi} \cos \frac{n\pi}{l} \cdot x + \frac{l^2}{n^2 \pi^2} \sin \frac{n\pi}{l} \cdot x. \end{aligned}$$

Demak,

$$\begin{aligned} a_n &= \frac{4h}{l^2} \int_0^{l/2} x \cdot \sin \frac{n\pi}{l} \cdot x dx + \frac{4h}{l} \int_{l/2}^l \sin \frac{n\pi}{l} \cdot x dx - \frac{4h}{l^2} \int_{l/2}^l x \cdot \sin \frac{n\pi}{l} \cdot x dx = \\ &= -\frac{4h}{l\pi n} \cdot x \cdot \cos \frac{n\pi}{l} \cdot x \Big|_0^{l/2} + \frac{4h}{n^2 \pi^2} \cdot \sin \frac{n\pi}{l} \cdot x \Big|_0^{l/2} - \frac{4h}{n\pi} \cdot \cos \frac{n\pi}{l} \cdot x \Big|_{l/2}^l + \\ &\quad + \frac{4h}{l\pi n} \cdot x \cdot \cos \frac{n\pi}{l} \cdot x \Big|_{l/2}^l - \frac{4h}{n^2 \pi^2} \cdot \sin \frac{n\pi}{l} \cdot x \Big|_{l/2}^l = \frac{8h}{n^2 \pi^2} \sin \frac{n\pi}{2}, \end{aligned}$$

$$b_n = \frac{2}{\pi a} \int_0^l f_2(x) \sin \frac{n\pi}{l} x \cdot dx = \frac{4\alpha}{\pi a} \int_0^{l/2} x \sin \frac{n\pi}{l} x \cdot dx + \frac{4\alpha}{\pi a} \int_{l/2}^l (l-x) \sin \frac{n\pi}{l} x \cdot dx.$$

Y uqoridagi hisoblashlami aynan takrorlab,

$$b_n = \frac{8\alpha l^2}{\pi^3 n^3 a} \cdot \sin \frac{n\pi}{2}$$

ni topamiz.

Demak, tor tebranishining ixtiyoriy  $t$  momentdagi holati

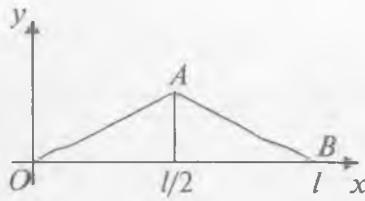

$$U(x,t) = \frac{8}{\pi^2} \sum_{n=1}^{\infty} \left( h \cos \frac{n\pi at}{l} - \frac{\alpha l^2}{n\pi a} \sin \frac{n\pi at}{l} \right) \sin \frac{n\pi}{2} \sin \frac{n\pi x}{l}.$$

### Mustaqil yechish uchun misollar

**394.** Uchlari  $x=0$  va  $x=l$  da mahkamlangan, boshlang'ich holati  $OAB$  siniq chiziqni ifodalovchi torning ixtiyoriy  $t$  vaqtidagi holatini boshlang'ich tezligi 0 bo'lgan holda aniqlang.

**395.** Uchlari  $x=0$  va  $x=l$  da mahkamlangan torning boshlang'ich og'ishi nolga teng bo'lib, boshlang'ich tezligi esa

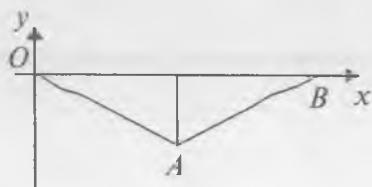

$$\left. \frac{\partial u}{\partial t} \right|_{t=0} = \begin{cases} \cos \frac{\pi(x-l)}{h}, & \text{agar } \left| x - \frac{l}{2} \right| < \frac{h}{2}, \\ 0, & \text{agar } \left| x - \frac{l}{2} \right| > \frac{h}{2} \end{cases}$$

formula bilan aniqlansa, torning ixtiyoriy  $t$  vaqtidagi holatini aniqlang.

**396.** Uchlari  $x=0$  va  $x=l$  da mahkamlangan, boshlang'ich holati  $u = h(x^4 - 2x^3 + x)$  ni ifodalovchi boshlang'ich tezligi 0 bo'lgan torning ixtiyoriy  $t$  vaqtidagi holatini aniqlang.

**397.** Uchlari  $x=0$  va  $x=3$  da mahkamlangan, boshlang'ich holati  $OAB$  siniq chiziqni ifodalovchi torning ixtiyoriy  $t$  vaqtidagi holatini aniqlang. Bunda  $O(0, 0)$ ,  $A(2, 1)$ ,  $B(3, 0)$  koordinatalarga ega.

**398.** Uchlari  $x=0$  va  $x=l$  da mahkamlangan torning dastlabki og'ishi 0 bo'lib, boshlang'ich tezligi esa

$$\left. \frac{\partial u}{\partial t} \right|_{t=0} = \begin{cases} u_0, & \text{agar } \left| x - \frac{l}{2} \right| < \frac{h}{2}, \\ 0, & \text{agar } \left| x - \frac{l}{2} \right| > \frac{h}{2} \end{cases}$$

formula bilan ifodalansa, torning ixtiyoriy  $t$  vaqtidagi holatini aniqlang.

## 9- §. Sterjenda issiqlik tarqalish tenglamasi. Chegaraviy masalaning qo‘yilishi

### I. Iss iqlikning chegaralanmagan sterjenda tarqalishi.

$\frac{\partial u}{\partial t} = a^2 \frac{\partial^2 u}{\partial x^2}$  tenglamani  $t > 0, -\infty < x < +\infty$  sohada  $u(x,0) = f(x)$ ,  
 $-\infty < x < +\infty$  boshlang‘ich shartni qanoatlantiruvchi yechimi

$$u(x,t) = \frac{1}{2a\sqrt{\pi t}} \cdot \int_{-\infty}^{+\infty} f(\xi) \cdot e^{-(\xi-x)^2/(4a^2t)} d\xi \quad (3.133)$$

Puasson integrali orqali aniqlanadi.

### II. Issiqlikning bir tomondan chegaralangan sterjenda tarqalishi.

$\frac{\partial u}{\partial t} = a^2 \frac{\partial^2 u}{\partial x^2}$  tenglamani  $\{x>0, t>0\}$  sohada  $u(x,0) = f(x)$  bosh-  
 lang‘ich va  $u(0,t) = \varphi(t)$  chegaraviy shartlarni qanoatlantiruvchi  
 yechimi

$$u(x,t) = \frac{1}{2a\sqrt{\pi t}} \cdot \int_0^{+\infty} f(\xi) \cdot [e^{-(\xi-x)^2/(4a^2t)} - e^{-(\xi+x)^2/(4a^2t)}] d\xi + \\ + \frac{x}{2a\sqrt{\pi}} \cdot \int_0^t \varphi(\eta) \cdot e^{-x^2/(4a^2(t-\eta))} (t-\eta)^{-\frac{3}{2}} d\eta \quad (3.134)$$

ko‘rinishda topiladi.

### III. Issiqlikning chegaralangan sterjenda tarqalishi.

$\frac{\partial u}{\partial t} = a^2 \frac{\partial^2 u}{\partial x^2}$  tenglamani  $u(x,t)|_{t=0} = f(x)$  boshlang‘ich va  
 $u(0,t) = u(l,t) = 0$  chegaraviy shartlarni qanoatlantiruvchi yechimi

$$u(x,t) = \sum_{n=1}^{\infty} b_n e^{-\frac{a^2 \pi^2 n^2 t}{l^2}} \cdot \sin \frac{\pi n x}{l} \quad (3.135)$$

ko‘rinishda aniqlanadi. Bunda  $b_n = \frac{2}{l} \int_0^l f(x) \sin \frac{\pi n x}{l} dx$ .

**1 - masala.**  $\frac{\partial u}{\partial t} = \alpha^2 \frac{\partial^2 u}{\partial x^2}$  tenglarnaning

$$u(x, t) \Big|_{t=0} = f(x) = \begin{cases} u_0, & \text{agar } x_1 < x < x_0, \\ 0, & \text{agar } x < x_1 \text{ yoki } x > x_2 \end{cases}$$

boshlang'ich shartni qanoat lantiruvchi yechimi topilsin.

Yechish. Sterjen chegarala nmagan bo'lgani uchun yechimni Puasson integrali ko'rinishi da izlaysiz:

$$u(x, t) = \frac{1}{2a\sqrt{\pi t}} \cdot \int_{-\infty}^{+\infty} f(\xi) \cdot e^{-(\xi-x)^2/(4a^2t)} d\xi.$$

Shartga ko'ra  $f(x)$  funksiya  $[x_1, x_2]$  oraliqda o'zgarmas  $u_0$  temperaturaga, qolgan oraliqda esa 0 ga teng bo'lgani uchun:

$$u(x, t) = \frac{u_0}{2a\sqrt{\pi t}} \cdot \int_{x_1}^{x_2} e^{-(\xi-x)^2/(4a^2t)} d\xi.$$

Burda quyidagi almashtirishni bajaramiz:

$$\frac{x-\xi}{2a\sqrt{t}} = \mu, \quad d\xi = -2a\sqrt{t} \cdot d\mu.$$

U holda

$$u(x, t) = -\frac{u_0}{\sqrt{\pi}} \int_{\frac{x-x_1}{2a\sqrt{t}}}^{\frac{x-x_2}{2a\sqrt{t}}} e^{-\mu^2} d\mu = \frac{u_0}{\sqrt{\pi}} \int_0^{\frac{x-x_1}{2a\sqrt{t}}} e^{-\mu^2} d\mu - \frac{u_0}{\sqrt{\pi}} \int_0^{\frac{x-x_2}{2a\sqrt{t}}} e^{-\mu^2} d\mu$$

yoki

$$u(x, t) = \frac{u_0}{2} \left[ \Phi\left(\frac{x-x_1}{2a\sqrt{t}}\right) - \Phi\left(\frac{x-x_2}{2a\sqrt{t}}\right) \right]$$

izlangan yechim bo'shadi.

Bu yerda  $\Phi(x) = \frac{2}{\sqrt{\pi}} \int_0^x e^{-t^2} dt$  integral Puasson integrali deb ataladi.

**2- masala.**  $\frac{\partial u}{\partial t} = \frac{\partial^2 u}{\partial x^2}$  tenglamaning  $x > 0$ ,  $t > 0$  da  $u|_{t=0} = f(x) = u_0$

boshlang'ich va  $u|_{x=0} = 0$  chegaraviy shartlarni qanoatlantiruvchi yechimini toping.

Yechish. Sterjen bir tomonidan chegaralangan uchun berilgan shartlarni qanoatlantiruvchi yechim ushbu ko'rinishga ega bo'ladi:

$$u(x, t) = \frac{1}{2\sqrt{\pi t}} \int_0^\infty u_0 \left[ e^{-\frac{(\xi-x)^2}{4t}} - e^{-\frac{(\xi+x)^2}{4t}} \right] d\xi$$

yoki

$$u(x, t) = \frac{u_0}{2\sqrt{\pi t}} \int_0^\infty \left[ e^{-\frac{(\xi-x)^2}{4t}} - e^{-\frac{(\xi+x)^2}{4t}} \right] d\xi.$$

Birinchisi integralda  $\frac{x-\xi}{2\sqrt{t}} = \mu$ ,  $d\xi = -2\sqrt{t}d\mu$  almashtirishni bajarib,

$$\frac{u_0}{2\sqrt{\pi t}} \int_0^\infty e^{-\frac{(\xi-x)^2}{4t}} d\xi = \frac{u_0}{\sqrt{\pi}} \int_{-\infty}^{\frac{x}{2\sqrt{t}}} e^{-\mu^2} d\mu = \frac{u_0}{2} \left[ 1 + \Phi\left(\frac{x}{2\sqrt{t}}\right) \right],$$

ikkinci integralda esa  $\frac{x+\xi}{2\sqrt{t}} = \mu$ ,  $d\xi = 2\sqrt{t}d\mu$  deb

$$\frac{u_0}{2\sqrt{\pi t}} \int_0^{+\infty} e^{-\frac{(x+\xi)^2}{4t}} d\xi = \frac{u_0}{\sqrt{\pi}} \int_{\frac{x}{2\sqrt{t}}}^{+\infty} e^{-\mu^2} d\mu = \frac{u_0}{2} \left[ 1 - \Phi\left(\frac{x}{2\sqrt{t}}\right) \right]$$

ga ega bo'lamiz.

Shunday qilib, yechim ushbu ko'rinishni oladi:

$$u(x, t) = u_0 \Phi\left(\frac{x}{2\sqrt{t}}\right).$$

**3- masala.**  $\frac{\partial u}{\partial t} = \frac{\partial^2 u}{\partial x^2}$  ( $0 < x < l$ ,  $t > 0$ ) tenglamaning

$$u|_{t=0} = f(x) = \begin{cases} x, & \text{agar } 0 < x \leq \frac{l}{2}, \\ l - x, & \text{agar } \frac{l}{2} < x < l \end{cases}$$

bo'sha, boshlang'ich va  $u|_{x=0} = u|_{x=l} = 0$  chegaraviy shartlarni qanoatlantiruvchi yechimini toping.

Yechish. Sterjen chegaralangan bo'lgaridan, berilgan chegaraviy shartlarni qanoatlantiruvchi yechimni ushbu ko'rinishda izlaymiz:

$$u(x, t) = \sum_{n=1}^{\infty} b_n e^{-\frac{\pi^2 n^2 t}{l^2}} \cdot \sin \frac{\pi n x}{l},$$

bu yerda

$$\begin{aligned} b_n &= \frac{2}{l} \int_0^l f(x) \sin \frac{\pi n x}{l} dx = \frac{2}{l} \int_0^{\frac{l}{2}} x \sin \frac{\pi n x}{l} dx + \frac{2}{l} \int_{\frac{l}{2}}^l (l-x) \sin \frac{\pi n x}{l} dx = \\ &= \left\{ \begin{array}{l} u = x, \quad du = dx \\ dv = \sin \frac{\pi n x}{l} dx, \quad v = -\frac{l}{\pi n} \cos \frac{\pi n x}{l} \end{array} \right\} = \frac{2}{l} \left( -\frac{l x}{\pi n} \cos \frac{\pi n x}{l} + \frac{l^2}{\pi^2 n^2} \sin \frac{\pi n x}{l} \right) \Big|_0^{\frac{l}{2}} + \\ &\quad + \frac{2}{l} \left( -\frac{l^2}{\pi n} \cos \frac{\pi n x}{l} + \frac{l x}{\pi n} \cos \frac{\pi n x}{l} - \frac{l^2}{\pi^2 n^2} \sin \frac{\pi n x}{l} \right) \Big|_{\frac{l}{2}}^l = \frac{4l}{\pi^2 n^2} \sin \frac{\pi n}{2}. \end{aligned}$$

Demak, izlanayotgan yechim ushbu ko'rinishga ega:

$$u(x, t) = \frac{4l}{\pi^2} \sum_{n=1}^{\infty} \frac{1}{n^2} \sin \frac{\pi n}{2} e^{-\frac{\pi^2 n^2 t}{l^2}} \cdot \sin \frac{\pi n x}{l}$$

yoki  $u(x, t) = \frac{4l}{\pi^2} \sum_{n=0}^{\infty} (-1)^n \frac{1}{(2n+1)} e^{-\frac{\pi^2 (2n+1)^2 t}{l^2}} \cdot \sin \frac{\pi (2n+1)x}{l}.$

## Mustaqil yechish uchun masalalar

**399.** Uzunligi  $l$  ga teng, tashqi muhit ta'siridan muhofazalangan

va  $u|_{t=0} = f(x) = \frac{cx(l-x)}{l^2}$  boshlang'ich temperaturaga ega bo'lgan bir jinsli sterjen berilgan. Sterjenning uchlari nolga teng temperaturada tutib turiladi. Sterjenning  $t > 0$  vaqtidagi temperaturasi topilsin.

**400.** Agar sterjenning  $u|_{t=0} = f(x) = \frac{2\pi}{l}x - \sin \frac{2\pi x}{l}$  boshlang'ich temperaturasi berilgan va uchlari issiqlikdan muhofazalangan, ya'ni

$\frac{\partial u}{\partial x} \Big|_{x=0} = \frac{\partial u}{\partial x} \Big|_{x=l} = 0$  bo'lsa, uzunligi  $l$  ga teng va sirti ham issiqlikdan muhofazalangan sterjenda temperatura taqsimotini toping.

**401.** Agar uzunligi  $l$  ga teng, sirti issiqlikdan muhofazalangan sterjenning boshlang'ich temperaturasi

$$f(x) = \begin{cases} \frac{2u_0}{l}, & \text{agar } 0 \leq x \leq \frac{l}{2}, \\ \frac{2u_0}{l}(l-x), & \text{agar } \frac{l}{2} < x < l \end{cases}$$

bo'lib, sterjenning uchlari ham issiqlikdan muhofazalangan bo'lsa, shu sterjenda issiqlik taqsimotini toping.

**Quyidaagi masalalarni Puasson formulasi yordamida hal qiling:**

$$402. \quad 4u_t = u_{xx}, \quad u \Big|_{t=0} = e^{2x-x^2}. \quad 403. \quad u_t = u_{xx}, \quad u \Big|_{t=0} = x \cdot e^{-x^2}.$$

$$404. \quad 4u_t = u_{xx}, \quad u \Big|_{t=0} = \sin x e^{-x^2}.$$

### 10- §. Laplas masalasining yechimlarini tekshirishga keltiriladigan masalalar

Markazi  $O(0,0)$  nuqtada bo'lgan doiraning chegarasida biror  $f(\phi)$  funksiya berilgan bo'lsin. Doirada va uning chegarasida uzlusiz

bo'lib, doira ichida  $\Delta u = \frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0$  Laplas tenglamasini va

$u_{r=R} = f(\varphi)$  chegaraviy shartni qanoatlantiradigan  $u(r, \varphi)$  funksiyani topish Dirixle masalasi bo'lib, uning yechimi

$$u(r, \varphi) = \frac{1}{2\pi} \int_{-\pi}^{\pi} f(\tau) \frac{R^2 - r^2}{R^2 - 2rR\cos(\tau - \varphi) + r^2} d\tau$$

ko'rimishda bo'ladi.

**1-masala.** Bir jinsli yupqa doiraviy plastinkada temperaturaning statisjonar taqsimini toping. Plast inka radiusi  $R$  ga teng bo'lib, uning yuqori qismi  $1^\circ C$  da, pastki qismi  $0^\circ C$  da tutib turiladi.

Yechish. Masala shartiga ko'ra  $f(\tau) = \begin{cases} 0, & \text{agar } -\pi < \tau < 0, \\ 1, & \text{agar } 0 < \tau < \pi \end{cases}$

bo'lsa, temperatura taqsimoti  $u(r, \varphi) = \frac{1}{2\pi} \int_{-\pi}^{\pi} \frac{R^2 - r^2}{R^2 - 2R\cos(\tau - \varphi) + r^2} d\tau$  integral bilan aniqlanadi.

a) Yuqori yarim doira ( $0 < \varphi < \pi$ ) nuqtalar uchun  $\operatorname{tg} \frac{\tau - \varphi}{2} = t$  almashtirishni kiritamiz, bundan  $\cos(\tau - \varphi) = \frac{1-t^2}{1+t^2}$ ;  $d\tau = \frac{2dt}{1+t^2}$ , ya'ni  $t$  integrallash o'zgaruvchisi  $\left(-\operatorname{tg} \frac{\varphi}{2}\right)$  dan  $\operatorname{ctg} \frac{\varphi}{2}$  gacha o'zgaradi.

Shunday qilib,

$$\begin{aligned} u(r, \varphi) &= \frac{1}{\pi} \int_{-\operatorname{tg} \frac{\varphi}{2}}^{\operatorname{ctg} \frac{\varphi}{2}} \frac{R^2 - r^2}{(R-r)^2 + (R+r)^2 t^2} dt = \frac{1}{\pi} \operatorname{arctg} \left( \frac{R+r}{R-r} t \right) \Big|_{-\operatorname{tg} \frac{\varphi}{2}}^{\operatorname{ctg} \frac{\varphi}{2}} = \\ &= \frac{1}{\pi} \left[ \operatorname{arctg} \left( \frac{R+r}{R-r} \operatorname{ctg} \frac{\varphi}{2} \right) + \operatorname{arctg} \left( \frac{R+r}{R-r} \operatorname{tg} \frac{\varphi}{2} \right) \right] = \end{aligned}$$

$$= \frac{1}{\pi} \operatorname{arctg} \frac{\frac{R+r}{R-r} \left( \operatorname{ctg} \frac{\varphi}{2} + \operatorname{tg} \frac{\varphi}{2} \right)}{1 - \left( \frac{R+r}{R-r} \right)^2} = -\frac{1}{\pi} \operatorname{arctg} \frac{R^2 - r^2}{2Rr \sin \varphi}$$

yoki

$$\operatorname{tg}(u\pi) = -\frac{R^2 - r^2}{2Rr \sin \varphi}, \quad 0 < \varphi < \pi.$$

Bu tenglikning o'ng tomoni manfiy, demak,  $0 < \varphi < \pi$  da u funksiya  $\frac{1}{2} < u < 1$  tengsizliklarni qanoatlantiradi. Bu hol uchun, ya'ni  $0 < \varphi < \pi$  da ushbu yechimga ega bo'lamiz:

$$\operatorname{tg}(\pi - u\pi) = \frac{R^2 - r^2}{2Rr \sin \varphi}$$

yoki

$$u = 1 - \frac{1}{\pi} \operatorname{arctg} \frac{R^2 - r^2}{2Rr \sin \varphi}.$$

b) Pastki yarim doirada joylashgan nuqtalar uchun ( $\pi < \varphi < 2\pi$ )

$$\operatorname{ctg} \frac{\tau - \varphi}{2} = t \text{ o'rniqa qo'yishdan foydalanamiz, bundan } \cos(\tau - \varphi) = \frac{t^2 - 1}{t^2 + 1},$$

$d\tau = -\frac{2dt}{t^2 + 1}$ , yangi integrallash o'zgaruvchisi  $t$  esa  $\left(-\operatorname{ctg} \frac{\varphi}{2}\right)$  dan

$\operatorname{tg} \frac{\varphi}{2}$  gacha o'zgaradi. U holda  $\varphi$  ning bu qiymatlari uchun ushbuga egamiz:

$$\begin{aligned} u(r, \varphi) &= -\frac{1}{\pi} \int_{-\operatorname{ctg} \frac{\varphi}{2}}^{\operatorname{tg} \frac{\varphi}{2}} \frac{R^2 - r^2}{(R+r)^2 + (R-r)^2 t^2} dt = \\ &= -\frac{1}{\pi} \left[ \operatorname{arctg} \left( \frac{R-r}{R+r} \operatorname{tg} \frac{\varphi}{2} \right) + \operatorname{arctg} \left( \frac{R-r}{R+r} \operatorname{ctg} \frac{\varphi}{2} \right) \right] \end{aligned}$$

yoki

$$u = -\frac{1}{\pi} \operatorname{arctg} \frac{(R^2 - r^2)}{2Rr \sin \varphi}, \quad \pi < \varphi < 2\pi.$$

O‘ng tomon musbat (chunki  $\sin \varphi < 0$ ), shuning uchun  $0 < u < \frac{1}{2}$ .

### Mustaqil yechish uchun masalalar

**Doira ichida Laplas tenglamasini qanoatla ntiruvchi va doira chegarasida  $u \Big|_{r=1} = f(\varphi)$  funksiyaga teng bo‘lgan garmonik funksiya topilsin.**

**405.**  $f(\varphi) = \cos^2 \varphi.$

**407.**  $f(\varphi) = \cos^4 \varphi.$

**406.**  $f(\varphi) = \sin^3 \varphi$

**408.**  $f(\varphi) = \sin^6 \varphi + \cos^6 \varphi.$
